C A N A D A
AND
THE CANADIANS.

BY
SIR RICHARD HENRY BONNYCASTLE, Kt.,
LIEUTENANT-COLONEL ROYAL ENGINEERS AND MILITIA
OF CANADA WEST.

New Edition.

IN TWO VOLUMES.

VOL. I.

L O N D O N :
HENRY COLBURN, PUBLISHER,
GREAT MARLBOROUGH STREET.

1849.

312015
19-2-35

F. Shoberl, Jun., Printer to H.R.H Prince Albert, Rupert Street.

CONTENTS
OF
THE FIRST VOLUME.

CHAPTER I.

Emigrants and Immigration . . .	Page 1
---------------------------------	--------

CHAPTER II.

The Emigrant and his Prospects . . .	46
--------------------------------------	----

CHAPTER III.

, A Journey to the Westward . . .	90
-----------------------------------	----

CHAPTER IV.

The French Canadian	127
-------------------------------	-----

CHAPTER V.

Penetanguishene — The Nipissang Cannibals, and a Friendly Brother in the Wilderness . . .	146
--	-----

CHAPTER VI.

Barrie and Big Trees—A new Capital of a new District— Nature's Canal—The Devil's Elbow—Macadamization and Mud—Richmond Hill without the Lass—The Rebellion and the Radicals—Blue Hill and Bricks . . .	172
---	-----

CHAPTER VII.

Toronto and the Transit—The Ice and its innovations—
 Siege and Storm of a Fortalice by the Ice-king—Newark,
 or Niagara—Flags, big and little—Views of American and
 of English Institutions—Blacklegs and Races—Colonial
 high life—Youth very young . . . 195

CHAPTER VIII.

The old Canadian Coach—Jonathan and John Bull pas-
 sengers—"That Gentleman"—Beautiful River, beautiful
 drive—Brock's Monument—Queenston—Bar and Pulpit—
 Trotting horse Railroad—Awful accident—The Falls once
 more—Speculation—Water Privilege—Barbarism—Mu-
 seum—Loafers—Tulip-trees—Rattlesnakes—The Burning
 Spring—Setting fire to Niagara—A charitable Woman
 —The Nigger's Parrot—John Bull is a Yankee—Political
 Courtship—Lundy's Lane Heroine—Welland Canal 217

CHAPTER IX.

The Great Fresh-water Seas of Canada . . . 266

CANADA

AND

THE CANADIANS.

CHAPTER I.

Emigrants and Immigration.

Very surprising it seems to assert that the Mother Country knows very little about the finest colony which she possesses—and that an enlightened people emigrate from sober, speculative England, sedate and calculating Scotland, and trusting, unreflective Ireland, absolutely and wholly ignorant of the total change of life to which they must necessarily submit in their adopted home.

I recollect an old story, that an old gunner, in an old-fashioned, three-cornered cocked

hat, who was my favourite playfellow as a child, used to tell about the way in which recruits were obtained for the Royal Artillery.

The recruiting sergeant was in those days dressed much finer than any field-marshal of this degenerate, railway era; in fact, the Horse Guards always turned out to the sergeant-major of the Royal Military Academy of Woolwich, when that functionary went periodically to the Golden Cross, Charing Cross, to receive and escort the young gentlemen cadets from Marlow College, who were abandoning the red coat and drill of the foot-soldier to become neophytes in the art and mystery of great gunnery and sapping.

“The way they recruited was thus,” said the bombardier. “The gallant sergeant, bedizened in copper lace from the crown of his head to the sole of his foot, and with a swagger which no modern drum-major has ever presumed to attempt, addressed a crowd of country bumpkins.

“ ‘Don’t listen to those gentlemen in red;

their sarvice is one which no man who has brains will ever think of—footing it over the univarsal world ; they have usually been called by us the flatfoots. They uses the musquet only, and have hands like feet, and feet like fireshovels.

“ ‘ Mind me, gentlemen, the royal regiment of the Royal Artillery is a sarvice which no gentleman need be ashamed of.

“ ‘ We fights with real powder and ball, the flatfoots fights with bird-shot. We knows the perry-ferry of the circumference of a round shot. Did you ever see a mortar ? Did you ever see a shell ? I will answer for it you never did, except the poticary’s mortar, and the shell that mortar so often renders necessary.

“ ‘ Now, gentlemen, at the imperial city of Woolwich, in the Royal Arsenal, you may, if you join the Royal Artillery, you may see shells in earnest. Did you ever see a balloon ? Yes ! Then the shells there are bigger than balloons, and are the largest hollow shot ever made—the French has nothing like them.

“ ‘ And the way we uses them ! We fires them out of the mortars into the enemy’s towns, and stuffs them full of red sogers. Well, they bursts, and out comes the flatfoots, opens the gates, and lets the Royal Artillery in ; and then every man fills his sack with silver, and gold, and precious stones, after a leetle scrimmaging.

“ ‘ Come along with me, my boys, and every one of you shall have a coat like mine, which was made out of the plunder ; and you shall have a horse to ride, and a carriage behind it ; and you shall see the glorious city of Woolwich, where the streets are paved with penny loaves, and drink is to be had for asking.’ ”

So it is with nine-tenths of the emigrants to Canada in these enlightened days ; so it is with the emigrants from old England, and from troubled Ireland, to the free and astonishing Union of the States of America and Texas, that conjoint luminary of the new go-ahead world of the West.

Dissatisfied with home, with visionary ideas

of El Dorados, or starving amidst plenty, the poorer classes obtain no correct information. Beset generally with agents of companies, with agents of private enterprise, with reckless adventurers, with ignorant priests, or missionaries of the lowest stamp, with political agitators, and with miserable traitors to the land of their birth and breeding, the poor emigrant starts from the interior, where his ideas have never expanded beyond the weaver's loom or factory labour, the plough or the spade, the hod, the plane, or the trowel, and hastens with his wife and children to the nearest seaport.

There he finds no friend to receive and guide him, but rapacious agents ready to take every advantage of his ignorance, with an eye to his scanty purse. A host of captains, mates, and sailors, eager to make up so many heads for the voyage, pack them aboard like sheep, and cross the Atlantic, either to New York or to Quebec, just as they have been able to entice a cargo to either port. Then come the horrors of a long voyage and short

provisions, and high prices for stale salt junk and biscuit ; and, at the end, if illness has been on board, the quarantine, that most dreadful visitation of all—for hope deferred maketh the heart sick.

From the first discovery of America, there has been a tendency to exaggeration about the resources and capabilities of that country—a magniloquence on its natural productions, which can be best exemplified by referring the reader to the fac-simile of the one in Sir Walter Raleigh's work on Guiana,¹ now in the British Museum. Shakespeare had, no doubt, read Raleigh's fanciful description of "the men whose heads do grow beneath their

¹ Brevis et admiranda descriptio REGNI GVIANÆ, AVRI abundantissimi, in AMERICA, sev novo orbe, sub linea Æquinoctilia siti: quod nuper admodum, Annis nimirum 1594, 1595, et 1596 per generosum Dominum Dr. GVALTHERVM RALEGH Equitem Anglum detectum est: paulo post jussa ejus duobus libellis comprehensa. Ex quibus JODOCVS HONDIVS TABVLAM Geographicam adornavit, addita explicatione Belgico sermone scripta: Nunc vero in Latinum sermonem translata, et ex variis authoribus hinc inde declarata. Noribergæ. Impensis LEVINI HULSII. M.D.XCIX.

shoulders," &c. ; for he was thirty-four years of age when this print was published, only seventeen years before his death.

So expansive a mind as Raleigh's undoubtedly was, was not free from that universal credulity which still reigns in the breasts of all men respecting matters with which they are not personally acquainted ; and the glowing descriptions of Columbus and his followers respecting the rich Cathay and the Spice Islands of the Indies have had so permanent a hold upon the imagination, that even the best educated amongst us have, in their youth, galloped over Pampas, in search of visionary *Uspallatas*. Nor is it yet quite clear that the golden city of El Dorado is wholly fabulous, the region in which it was said to exist not having yet been penetrated by Science ; but it soon will be, for a steam-boat is to ply up the Maranon, and Peru and Europe are to be brought in contact, although the voyage down that mighty flood has hitherto been a labour of several months.

The poor emigrant, for we must return to

him, lands at New York. Sharks beset him in every direction, boarding-houses and grog-shops open their doors, and he is frequently obliged, from the loss of all his hard-earned money, to work out his existence either in that exclusively mercantile emporium, or to labour on any canal or railroad to which his kind new friends may think proper, or most advantageous to themselves, to send him. If he escapes all these snares for the unwary, the chances are that, fancying himself now as great a man as the Duke of Leinster, O'Connell, the Lord Mayor of London, or the Provost of Edinburgh, free and unshackled, gloriously free, he becomes entangled with a host of land-jobbers, and walks off to the weary West, there to encounter a life of unremitting toil in the solitary forests, with an occasional visit from the ague, or the milk-fever, which so debilitates his frame, that, during the remainder of his wretched existence, he can expect but little enjoyment of the manorial rights appendant to a hundred acres of wild land.

Let no emigrant embark for the United States unless he has a kind friend to guide and receive him there, and to point out to him the good and the evil; for the native race look upon all foreigners with a jealous eye, and particularly upon the Irish.

The Germans make the best settlers in that country, perhaps because, not speaking English, they cannot be so easily imposed upon by the crimps, and also because they seldom emigrate before they have arranged with their friends in America respecting the lands which they are to occupy.

A society of British philanthropists has been established at New York to direct British emigrants in their ultimate views; but it may well be imagined that these gentlemen, who are chiefly engaged in trade, cannot descend to understand fully, or are constant witnesses of, the low tricks which are practised to seduce the unwary ones.

The emigrant to Canada is somewhat differently situated.

The Irish come out in shiploads every

season, and generally very indifferently provided and without any definite object; nay, to such an extent is this carried, that hundreds of young females venture out every year by themselves, to better their condition, which betterment usually ends in their reaching as far inland as Toronto, where, or at other ports on the lakes, they engage themselves as domestics.

When we consider that nearly 25,000 emigrants leave the Mother Country every year for Canada alone, how important is it that they should be informed of every particular likely to increase their comforts and to conduce to their well-being! This kind of service can be but partially rendered by the present publication, which, being intended for the general reader, cannot be given in a form likely to reach the class of emigrants who usually proceed to America otherwise than through the advice which the reader may, whenever it is in his power, kindly bestow upon them. But it will, I am persuaded, be extensively useful in that way, and also to

the settler with a small capital who can afford to consult it.

Learned dissertations upon colonization are useful only to the politician, and so much venality has prevailed among those who have thrust themselves forward in the cause of Canadian settlement, that the public become a little alarmed when they hear of a work expressly designed for the emigrant.

The very best informed at home, and the *haute noblesse*, have been repeatedly taken in. Dinnerings and lionizing have been the order of the day for persons, who, in the colony, cut a very inferior figure. But this is natural, and in the end usually does no harm. It is natural that the colonist, who is a *rara avis* in England, should be considered a very extraordinary personage among men who seek for novelty in any shape; because those who lavish favours upon him at one time and eschew his presence afterwards are usually ignorant of the very history of which he is the type. It is like the standing joke of sending out water-casks for the men-of-war

built on the fresh-water seas of Canada, for there are plenty of rich folks at home who want only to be filled.

The different sorts of people who emigrate from *home* to the United States or Canada, may be classed under several heads, like the travellers of Sterne.

First, the inquisitive and restless, who leave a goodly inheritance or occupation behind them, because they have heard that Tom Smith or Mister Mac Grogan, very ordinary folks anywhere, have made a rapid fortune, which is indeed sometimes the case in the United States, though rather rare there for old countrymen, and is still more rare and unlikely in Canada, where large fortunes may be said to be unknown quantities.

Settlers of this class usually fall to the ground very soon—if they settle in Canada, they become Radicals; if they return from the States, they become Tories.

The next class are your would-be aristocratic settlers, younger sons of younger sons, cousins of cousins, Union Barons, nephews'

nephews of a Lord Mayor, or unprovided heirs in posse.

These fancy they confer a sort of honour by selecting the colony as their final resting-place, and that a governor and his ministers have nothing in the world to think about but how they can provide for such important units. Hence they frequently end by placing themselves in direct opposition to the powers that be, or take very unwillingly to the labours of a farmer's life. Many of them, when they find that pretension is laughed at, particularly if no talents accompany it, which is rarely or ever the case, for talent is modest and retiring in its essential nature, turn out violent Republicans or Radicals of the most furious calibre; but the more modest portion work heartily at their farms, and frequently succeed.

Another class is your private gentlemen's sons and decent young farmers from England, Ireland, or Scotland, who think before they leap, have connexions already established in Canada, and small capitals to commence

with. These are the really valuable settlers : they go to Canada for land and living, and eschew the land and liberty system of the neighbouring nation. Wherever they settle, the country flourishes and becomes a second Britain in appearance, as may be observed in the London and western districts.

It does not require a very lengthened acquaintance with Canada to form observations upon the characters of the *immigrants*, as the Webster style of Dr. Johnson will have the word to be.

The English franklin and the English peasant who come here usually weigh their allegiance a little before they make up their minds ; but, if they have been persuaded that Queen Victoria's reign is a "*baneful domination*," they either go to the United States at once, or to those portions of Canada where sympathy with the Stars and Stripes is the order of the day.¹

¹ That is, to those portions of the London and western district where American settlers abound, who have so generously repaid the fostering care which Governor Simcoe

If they be Scotch Radicals, the most uncompromising and the most bitter of all politicians, they seek Canada only with the ultimate hope of revolutionizing it.

But the latter are more than balanced by the respectable Scotch, who emigrate occasionally upon the same principles which actuate the respectable portion of the English emigrants, and by the hardy Highlanders already settled in various parts of the colony, whose proverbial loyalty is proof against the arts of the demagogue.

The great mass of emigrants may however be said to come from Ireland, and to consist of mechanics of the most inferior class, and of labourers. These are all impressed with the most absurd notions of the riches of America, and on landing at Quebec often refuse high wages with contempt, to seek the Cathay of their excited imaginations westward.

originally extended to them. One of those rabid folks indebted to the British government, who kept an inn, padlocked his pumps lately when a regiment was marching through Woodstock in hot dusty weather, that the soldiers might not slake their thirst.

If they be Orangemen, they defy the Pope and the devil as heartily in Canada as in Londonderry, and are loyal to the backbone.

If they are Repealers, they come here sure of immediate wealth, to kick up a deuce of a row, for two shillings and sixpence currency is paid for a day's labour, which two shillings and sixpence was a hopeless week's fortune in Ireland; and yet the Catholic Irish who have been long settled in the country are by no means the worst subjects in this Trans-Atlantic realm, as I can personally testify, having had the command of large bodies of them during the border troubles of 1837-8. They are all loyal and true.

In the event of a war, the Catholic Irish, to a man—and what a formidable body it is in Canada and the United States!—will be on the side of England. O'Connell has prophesied rightly there, for it is not in human nature to forget the wrongs which the Catholics have suffered for the past ten years in a country professing universal freedom and toleration.

The Americans of the better classes with

whom I have conversed admit this, but their dislike of the Irish is rooted and general among all the native race ; and they fear as well as mistrust them, because, in many of the largest cities, New York for one, the Irish predominate.

The Americans say, and so do the Canadians, that, for some years back, since the repeal agitation at home, a few very ignorant and very turbulent priests, of the lowest grade, have found their way across the Atlantic. I have travelled all over Canada, and lived many years in the country, and have been thrown among all classes, from my having been connected with the militia. I never saw but one specimen of Irish hedge-priest, and therefore do not credit the assertion ; this one came out last year, and a more furious bigot or a more republican ultra I never met with, at the same time that he was as ignorant as could be conceived.

Such has not hitherto been the case with the Catholic priesthood of the Canadas. The French Canadian clergy are a body of

pious, exemplary men, not perhaps shining in the galaxy of science, but unobtrusive, gentlemanly, and an honour to the *soutane* and *chasuble*.

The priests from Ireland are not numerous, for the Irish chapels were, till very lately, generally presided over by Scotch missionaries; and I can safely say that, whether Irish or Scotch, the Catholic priesthood of Western Canada will not yield the palm to their Franco-Canadian brethren of the cross, and that loyalty is deeply inculcated by them. I have long and personally known and admired the late Bishop Mac Donell; a worthier or a better man never existed. The highest and the lowest alike loved him.

I saw him bending under the weight of years, passed in his ministry and in the defence of his adopted country, just before he left Canada, to lay his bones in his natal soil, preside over the ceremony of placing the first stone of the Catholic seminary, for which he had given the ground and funds to the utmost of his ability.

He was a large, venerable-looking man, unwieldy from the infirmities of age and a life of toil and trouble ; and the affecting and touching portion of the scene before us was to see him supported on his right and left by the arms of a Presbyterian colonel and a colonel of the Church of England.

This is true Christianity, true charity—peace be to his soul !—

His successor was a Canadian, equally free from pretension and bigotry ; and he was succeeded by an Irishman, whose mission is to heal the wounds of party and strife. He is living and in office ; I cannot, therefore, speak of him ; but, differing as an Englishman so widely as I do in religious tenets from his, I can freely assert that, if clergymen of every denomination pursued the same course of brotherly love that he does, we should hear no more of the fierce and undying contention about subjects which should be covered with the veil of benevolence and humility.

You cannot force a man to think as you do, to draw him into what you conceive to be

the true path ; mildness and conciliation are much more likely to effect your object than the Emperor of China's yellow stick. The days of the Inquisition, of Judge Jefferies, and of Claverhouse, are happily gone by ; and the artillery of man's wrath now vents its harmless thunders much in the same way as the thunders of the Vatican, or the recent fulmination of the Archbishop of Paris against the author of the *Wandering Jew* ; that is to say, with a great deal of noise, but without much damnifying any one, as the public soon formed a true judgment of M. Sue and of the tendency of his works.

On the other hand, how horrible it is, and what a fearful view of frail human nature is opened for a searching mind to observe that a man, who professes to have abandoned the pleasures of existence, to have broken through the very first law of nature, to have separated himself from his kind, and to have assumed perfection and infallibility, the attributes of his Creator, devoting the altar at which he serves to the wicked purposes of

arraying man against man, and of embruining the hands held up before him at prayer in the blood of his fellow-mortals !

But such is the inevitable tendency of the system of "I am better than thou," whether it be practised by a Catholic priest of the hedge-school, by a fanatic bawler about new light, or by a fierce and uncompromising churchman. Faith, hope, and charity, are alike misinterpreted and misunderstood. Faith with these consists in blind or hypocritical devotion to their peculiar opinions and dogmas ; hope is limited to the narrowest circle of ideas ; and charity, Divine charity, exists not ; for even the very relics, the mouldering bones of the defunct, are not allowed to rest side by side ; and as to those differing in the slightest degree from them, to them charity extends not, however pious, however sincere, or however excellent they may be.

The people of England are very little aware how widely Roman Catholicism extends in the United States and in Canada.

From accurate returns, it has been ascertained that in the United States there were last year 1,500,000, with 21 bishops, 675 churches, 592 mission stations, and 572 priests otherwise employed in teaching and travelling; 22 colleges or ecclesiastical establishments, 23 literary institutions, 53 female schools or convents for instruction, 84 charitable hospitals and institutions, and 220 young students, preparing for the ministry; whilst we learn, from the *Annals of the Propaganda*, that 1,130,000 francs were appropriated, in May 1845, to the missions of America, or about £47,000 annually, of which the share for the United States, including Texas, was 771,164 francs, or about £32,000 in round numbers.

Then again, the greater portion of the Indian tribes in the north-west and west, excepting near the Rocky Mountains or beyond them, are Roman Catholics; and their numbers are very great, and all in deep hatred, dislike, and enmity, to the Big Knives.

More than half a million of the Lower

Canadians are also of the same persuasion, and their church in Upper Canada is large and increasing by every shipload from Ireland. Even in Oregon, a Catholic bishop has just been appointed.

It is more than probable, that in and around the United States three millions of Roman Catholic men are ever ready to advance the standard of their faith; whilst Mexico, weak as it is, offers another Catholic barrier to exclusive tenets of liberty, both of conscience and of person.

It is surprising how very easily the emigrants are misled, and how simply they fancy that, once on the shores of the New World, Fortune must smile upon them.

There is a British society, as I have already stated, for mutual protection, established at New York; and the government have agents of the first respectability at Quebec, at Montreal, and at Kingston. But the poorer classes, as well as those whose knowledge of life has been limited, are sadly defrauded and deluded.

At a recent meeting of the Welsh Society at New York, facts were stated, showing the depravity and audacity of the crimps at Liverpool and New York. The President of the Society said that, owing to the nefarious practices against emigrants, the Germans first, then the Irish, after that the Welsh, and lastly the English residents of the city had taken the matter in hand by the formation of Protective Societies.

The president of the Friendly Sons of St. Patrick observed that in Liverpool the poor emigrants were fleeced without mercy ; and he gave as one instance a fact that, by the representations of a packet agent, a large number of emigrants were induced to embark on board a packet without the necessary supply of provisions, being assured that for their passage-money they would be supplied by the captain—an arrangement of which the captain was wholly ignorant.

The president of the Welsh Society exhibited sixty dollars of trash in bills of the Globe Bank, that had been palmed off upon

an unsuspecting Welshman by some rascal in Liverpool, in exchange for his hoarded gold, and declared that this was only one of a series of like villanies constantly occurring.

The ex-president of the St. George's Society, Mr. Fowler, mentioned a curious circumstance connected with the history of New York. He said that he remembered the city when it contained only fifty thousand inhabitants, and not one paved side walk, excepting in Dock Street. Now it had a population of nearly 400,000, and had so changed, that he could no longer identify the localities of his youthful days.

Who, he asked, had done this? The emigrant! and it was protection they needed, not charity. He should have added, that the great mass of the emigrants who have made New York the mighty city it now is, were Irish, and that the native Americans have banded themselves in another form of protection against their increasing influence.

The republican notions which the greater portion of the lower classes emigrating from the

old country have been drilled into, lead them to believe that in the United States all men are equal, and that thus they have a splendid vault to make from poverty to wealth, an easy spring from a state of dependency to one of vast importance and consideration. The simple axiom of republicanism, that a ploughman is as good as a president, or a quarryman as an emperor, is taken firm hold of in any other sense than the right one. What sensible man ever doubted that we were all created in the same mould, and after the same image ; but is there a well educated sane mind in America, believing that a perfect equality in all things, in goods and chattels, in agrarian rights and in education, is, or ever will be, practicable in this naughty world ?

Has nature formed all men with the same capacities, and can they be so exactly educated that all shall be equally fit to govern ?

The converse is true. Nature makes genius, and not genius nature. How rarely she yields a Shakespeare !—There has been but one Homer, one Virgil, since the creation.

There was never a second Moses, nor have Solomon's wisdom and glory ever again been attainable.

Look at the rulers of the earth, from the patriarchs to the present day, how few have been pre-eminent! Even in the earliest periods, when the age of man reached to ten times its present span, the wonderful sacred writ records Tubal-Cain, the first artificer, and Jubal, the lyrist, as most extraordinary men; and with what care are Aholiab and Bezabel, cunning in all sorts of craft, and Hiram, the artificer of Tyre, recorded! Hiram, the king, great as he undoubtedly was, was secondary in Solomon's eyes to the widow's son.

These men, says the holy record, were gifted expressly for their peculiar mission; and so are all men, to whom the Inscrutable has been pleased to assign extraordinary talent.

Cæsar, the conqueror, Napoleon, his imitator, and Nelson, and Wellington, are they on a par with the rabble of New York? Procul, O, procul este profani!

Pure democracy is an utter and unattainable impossibility; nature has effectually barred against it. The only thing in the course of a life of more than half a century that has ever puzzled me about it is, that the Catholic clergy should, in so many parts of the world, have lent it a helping hand. The ministers of a creed essentially aristocratic, essentially the pillars of the divine right of kings, have they ever been in earnest about the matter? Perhaps not!

If that giant of modern Ireland, the pacificator citizen king, succeeded in separating the island from Great Britain, would he, on attaining the throne, or the dictatorship, or the presidency, or whatever it might be, for the nonce, desire pure democracy? *Je crois que non*, because, if he did, he would reign about one clear week afterwards.

Look at the United States, see how each successive president is bowed down before the Moloch altar; he must worship the democratic Baal, if he desires to be elected, or re-elected. It is not the intellect, or the wealth of the Union that rules. Already they seri-

ously canvass in the Empire State perfect equality in worldly substance, and the division of the lands into small portions, sufficient to afford the means of respectable existence to every citizen. It is, perhaps, fortunate that very few of the office-holders have much substance to spare under these circumstances; but, if the President, Vice-President, and the Secretaries of State, are to live upon an acre or two of land for the rest of their lives, Spartan broth will be indeed a rich diet to theirs.

When the sympathizers invaded Canada, in 1838-1839, the lands of the Canadians were thus parcelled out amongst them, as the reward of their extremely patriotic services, but in slices of one hundred, instead of one or two, acres.

But, notwithstanding all this ultra-democracy, there is at present a sufficient counter-balance in the sense of the people, to prevent any very serious consequences; and the Irish, from having had their religion trampled upon, and themselves despised, would be

very likely to run counter to native feeling.

If any country in the whole civilized world exhibits the inequality of classes more forcibly than another, it is the country which has lately annexed Texas, and which aims at annexing all the New World.

There is a more marked line drawn between wealth and pretension on the one hand, poverty and impertinent assumption on the other, than in the dominions of the Czar. Birth, place, power, are all duly honoured, and that sometimes to a degree which would astonish a British nobleman, accustomed all his life to high society. I remember once travelling in a canal boat, the most abominable of all conveyances, resembling Noah's ark in more particulars than its shape, that I was accosted, in the Northern States too, and near the borders, where equality and liberty reign paramount, by a long slab-sided fellow-passenger, who, I thought, was going to ask me to pay his passage, his appearance was so shabby, with the following questions :

“Where are you from? are you a Livingstone?” I told him, for I like to converse with characters, that I was from Canada. “What’s your name?” he asked. I satisfied him. He examined me from head to foot with attention, and, as he was an elderly man, I stood the gaze most valiantly. “Well,” he said, “I thought you were a Livingstone; you have got small ears, and small feet and hands, and that, all the world over, is the sign of gentle blood.”

He was afterwards very civil; and, upon inquiring of the skipper of the boat who he was, I found that my friend was a man of large fortune, who lived somewhere near Utica, on an estate of his own.

This was before the sympathy troubles, and I can back it with another story or two to amuse the reader.

Some years ago, when it was the fashion in Canada for British officers always to travel in uniform, I went to Buffalo, the great city of Buffalo on lake Erie, in the Thames steamer, commanded by my good friend, Captain Van

Allen, and the first British Canadian steamboat that ever entered that harbour. We went in gallantly, with the flag flying that “has braved a thousand years the battle and the breeze.” I think the majority of the population must have lined the wharfs to see us come in. They rent the welkin with welcomes, and, among other demonstrations, cast up their caps, and cried with might and main—“Long live George the Third!”—Our gracious monarch had for years before bid this world good night, but that was nothing; the good folks of Buffalo had not perhaps quite forgotten that they were once, long before their city was a city, subjects of King George.

I and another officer in uniform were received with all honours, and escorted to the Eagle hotel, where we were treated sumptuously, and had to run the gauntlet of handshaking to great extent. A respectable gentleman, about forty, some seven years older than myself, stuck close to me all the while. I thought he admired the British undress uniform, but he only wanted to ask questions,

and, after sundry answers, he inquired my name, which being courteously communicated, he said, “Well, I am glad, that’s a fact, that I have seen you, for many is the whipping I have had for your book of Algebra.” Now I never was capable of committing such an unheard-of enormity as being the cause of flagellation to any man by simple or quadratic equations; and it must have been the binomial theorem which had tickled his catastrophe, for it was my father’s treatise which had penetrated into the new world of Buffalonian education.

It is a pity, is it not, gentle reader, that such feelings do not now exist?

Nevertheless, even now, the designation of a British officer is a passport in any part of the United States. The custom-house receives it with courtesy and good-will; society is gratified by attentions received from a British officer; and it is coupled with the feelings which the habits and conduct of a gentleman engender throughout Christendom.

At New York, I visited every place worth

seeing ; and, although disliking gambling, races, and debating societies, *à outrance*, I was determined to judge for myself of New York, of life in New York.

On one occasion, I was at a meeting of the turf in an hotel after the races, where violent discussions and heavy champagning were going on. I was then (it was in 1837) a major in the army, and was introduced to one or two prominent men in the room as a British officer who had been to see the race-course ; this caused a general stir, and the champagne flew about like —— I am at a loss for a simile ; and the health of Queen Victoria was drunk with three times three.

On board a packet returning from England, we had several of the leading characters of the United States as passengers. A very silly and troublesome democrat, of the Locofoco school, from Philadelphia, made himself conspicuous always after dinner, when we sat, according to English fashion, at a dessert, by his vituperations against monarchy and an exhibition of his excessive love for everything

American. The gentlemen above alluded to, men who had travelled over Europe, whose education and manners made them that which a true gentleman is all over the world, were disgusted, and, to punish his impertinence, proposed that a weekly paper should be written by the cabin passengers, in which the occurrences of each day should be noted and commented upon, and that poetry, tales, and essays, should form part of its matter.

They agreed to discuss the relative points and bearings of monarchy and democracy; they to depute one of their number to be the champion of monarchy; and we to chuse the champion of democracy from amongst the English passengers.

Two drawings were fixed up at each end of the table after dinner; one, representing a crowned Plum-pudding; and the other, Liberty and Equality, by the well-known sign. The blustering animal was soon effectually silenced; a host of first-rate talent levelled a constant battery at his rude and uncultivated mind.

I shall never forget this voyage, and I hope the talent-gifted Canadian lawyer who threw down the gauntlet of Republicanism, and who has since risen to the highest honours of his profession which the Queen can bestow, has preserved copies of the Saturday's Gazette of The Mediator American Packet-ship.

The mention of this vessel puts me in mind of one more American anecdote, and I must tell it, for I have a good deal of dry work before me.

Crossing the Atlantic once in an American vessel, we met another American ship, of the same size, and passed very close. Our captain displayed the stars and stripes in true ship-shape cordial greeting. Brother Jonathan took no notice of this sea civility, and passed on; upon which the skipper, after taking a long look at him with his spy-glass, broke out in a passion, "What!" said he, "you won't show your b—d bunting, your old stripy rag? Now, I guess, if he had been a Britisher, instead of a d—d Yankee,

he would not have been ashamed of his flag ; he would have acted like a gentleman. Phew !” and he whistled, and then chewed his cigar viciously, quite unconscious that I was enjoying the scene.

But, if it be possible that one peculiar portion of the old countrymen are more disliked or despised than another in any country under the sun, connected by such ties as the United States are with Britain, there can be no doubt that the condition of the Jews under King John, as far as hatred and unexpressed contumelious feeling goes, was preferable to the feeling which native Americans, of the ultra Loco-foco or ultra-federal breed, entertain towards the labouring Catholic Irish, and would, if they could with safety, vent upon them in dreadful visitation. They would exterminate them, if they dared.

To account for such a feeling, it must be observed that a large portion of these ignorant and misguided men have brought much of this animosity upon themselves ; for, continuing in the New World that barbarous

tendency to demolish all systems and all laws opposed to their limited notions of right and wrong, and, whilst their senseless feuds among themselves harass society, they eagerly seek occasions for that restless political excitement to which they are accustomed in their own unhappy and regretted country.

A body of these hewers of wood and drawers of water, who, when not excited, are the most innocent and harmless people in the world—easily led, but never to be driven—get employed on a canal or great public work; and, no sooner do they settle down upon wages which must appear like a dream to them, than some old feud between Cork and Connaught, some ancient quarrel of the Capulets and Montagues of low life, is recollected, or a chant of the Boyne water is heard, and to it they go pell-mell, cracking one another's heads and disturbing a peaceful neighbourhood with their insane broils.

Or, should a devil, in the shape of an adviser, appear among them, and persuade these

excitable folks that they may obtain higher wages by forcing their own terms, bludgeons and bullets are resorted to, in order to compel compliance, and incendiarism and murder follow, until a military force is called out to quell the riots.

The scenes of this kind in Canada, where vast sums are annually expended on the public works, have been frightful; and such has been the terror which these lawless hordes have inspired, that timid people have quitted their properties and fled out of the reach of the moral pestilence; nay, it has been carried so far, that a Scotch regiment has been marked on account of its having been accidentally on duty in putting down a canal riot; and, wherever its station has afterwards been cast, the vengeance of these people has followed it.

At Montreal, the elections have been disgraced by bodies of these canallers having been employed to intimidate and overawe voters; and, were it not that a large military force is always at hand there, no election

could be made of a member, whose seat would be the unbiassed and free choice of his constituents.

It is, however, very fortunate for Canada that these canallers are not usually inclined to settle, but wander about from work to work, and generally, in the end, go to the United States. The Irish who settle are fortunately a different people; and, as they go chiefly into the backwoods, lead a peaceful and industrious life.

But it is, nevertheless, very amusing, and affords much insight into the workings of frail human nature to observe the conduct of that portion of the Irish emigrants who find that they have neither the means of obtaining land, nor of quitting some large town at which they may arrive. Their first notion then is to go out to service, which they had left Ireland to avoid altogether. The father usually becomes a day-labourer, the sons farm-servants or household servants in the towns, the daughters cooks, nursery-maids, &c.

When they come to the mistress of a family

to hire, they generally sit down on the nearest chair to the door in the room, and assume a manner of perfect familiarity, assuring the lady of the house that they never expected to go out to service in America, but that some family misfortune has rendered such a step necessary. The lady then, of course, asks them what branch of household service they can undertake; to which the invariable reply is, anything — cook or housemaid, child's-maid or housekeeper, and that indeed they lived in better places at home than they expect to get in America, such as Lord So-and-so's, or Squire So-and-so's.

The end of this is obvious; and a lady told me, the other day, she hired a professed cook, who was very shortly put to the test by a dinner-party occurring a day or two after she joined the household. Her mistress ordered dinner; and one joint, or *pièce de résistance*, was a fine fillet of veal. The professed cook, it appeared, laboured under a little *manque d'usage* on two delicate points, for she very unexpectedly burst into her lady's boudoir

just as she was dressing for dinner, and exclaimed, “Mistress, dear, what’ll I do with the vail?”—“The veil?” said the dame, in horror; “what veil?”—“Why, the vail in the pot, marm; I biled it, and it swelled out so, the divil a get it out can I git it.”

So with the farm-servants, they can all do everything; and an Irish gentleman told me that he lately hired a young man, an emigrant, to plough for him; and, on asking him if he understood ploughing, the good-natured Paddy answered, offhand, “Ploughing, is it? I’m the boy for ploughing.”—“Very well, I’m glad of it,” said the gentleman, “for you are a fine, likely young fellow, so I shall hire you.” He hired him accordingly at high wages—ten dollars a month and provisions and lodging found. The first day he was to work, my friend told him to go and yoke the oxen. Paddy stared with all his eyes, but said nothing, and went away. He staid some time, and then returned with a pair of oxen, which he was driving before him. “Here’s the oxen, master!”—“Where are

the yokes, Paddy?"—"The yokes! by the powers, is that what they call beef in Canady?" Poor Paddy had been a weaver all his live-long days.

The Irish are almost exclusively the servants in most parts of the northern states and throughout Canada, excepting the French Canadians, and very attached, faithful servants they frequently are; but notions of liberty and equality get possession of their phrenological developments, and they are almost always on the move to better their condition, which rarely happens as they desire.

Then another crying evil in Canada and in the States is the rage for dress. An Irish girl no sooner gets a modicum of wages than all her thoughts are to go to chapel or church as fine or finer than her mistress. Nearly every servant-girl in the large towns has a *ridicule* (that must be the proper way of spelling it), a bustle, a parasol, an expensive shawl, and a silk gown, and fine bonnet, gloves, and a white pocket-handker-

chief. The men are not so aspiring, and usually don on Sundays a blue coat and brass buttons, white pantaloons, white gloves, and a good fur cap in winter, or a neat straw hat or brilliant beaver in summer. The waistcoat is nondescript, but the boots are irreproachable. A cigar has nearly replaced the pipe in the streets.

I will defy a short-sighted person to distinguish her nursery-maid from her own sister at a little distance; and, being somewhat afflicted that way myself, I frequently nod to a well-dressed soubrette, thinking she is at least a leading member of the aristocracy of the town; and this is the more amusing, as in all colonial towns and in the *haute société* of the Republic very considerable magnificence is affected, and a rage for rank and pseudo-importance is not a little the order of the day. "Nothing," says a distinguished writer upon that most frivolous of all threadbare subjects, etiquette, "nothing is more decidedly the sign of a vulgar-born or a vulgar-bred person than to be ready to prac-

tise the art of cutting.” I therefore bow to the well-dressed grisettes, upon the principle of avoiding to be thought vulgar in mixed society by cutting a lady of tremendous rank ; as I would rather take a cook for a Countess, or a chambermaid for an Honourable, than be guilty of so much rudeness.

You must not smile, gentle reader, and say cooks are often handsomer than Countesses, or chambermaids prettier than Honourables ; I am like the old man of the Bubbles of Brunnen, insensible to anything but the beauties of nature. Neither must you think we have no Countesses nor Honourables in Canada. The former are in truth *raræ aves*, but the latter—why, every change of ministry creates a batch of them.

CHAPTER II.

The Emigrant and his Prospects.

Those who really wish Canada well desire it to become a second Britain, and not a mere second Texas. Those who wish it evil, and these comprise the restless, unprovided race of politicians under whose incessant agitation Canada has so long groaned, desire its Texian annexation to the already overgrown States in its vicinity.

That it may become a second Britain and hold the balance of power on the continent of America is my prayer, and the prayer too of one who entertains no enmity towards the people of the United States, but who admires their unceasing exertions in behalf of their country, who would admire their institutions, based as they are upon those of Eng-

land, if the grand design of Washington had been carried out, and perfect freedom of thought and of action had been secured to the people, instead of a slavish awe of the mob, an absolute dread of the uneducated masses, a sovereign contempt of the opinion of the world in accomplishing any design for the aggrandizement of the Union, the most despotic and degrading oppression of all who presume to hold religious opinions at variance with those of the masses, and the chained bondsman in a land of liberty!

To guard the respectable settler, who has a character at stake, and a family with some little capital to lay out to better advantage than he can at home, against the grievous and often fatal errors which have been propagated for sinister motives by needy adventurers who have written about Canada, or who are or have been agents for the sake only of the remuneration which it brings, caring but little for the misery they have entailed, I have undertaken to continue an account of this fine province, where nothing is provided by Nature

except fertile soil and a healthy climate ; the rest she leaves to unremitting labour and to the exercise of judgment by the settler.

As I have already inferred, this work will contain nothing vituperative of the United States, of that people who are the grandchildren of Britannia, and whose well-being is so essential to the peace and security of Christendom.

I shall endeavour to render it as plain and unpretending as possible, and shall not confine myself to studied rules or endeavours to make a book, taking up my subject as suits my own leisure, which is not very ample, and resuming or interrupting it at pleasure or convenience.

It will be necessary to enter more at large than in my preceding volumes into the resources of Canada, and, for this end, Geology and other scientific subjects must be introduced ; but, as I dislike exceedingly that heavy and gaudy veil of learning, that embroidered science, with which modern taste conceals those secrets of Nature which have been so partially unfolded, I shall not have

frequent recourse to absurd Greek derivations, which are very commonly borrowed for the occasion from technical dictionaries, or lent by a classical friend ; but, whenever they must occur, the dictionary shall explain them, for I really think it beneath the dignity of the lights of modern Geology to talk as they do about the Placoids and the Ganoids, as the first created fishlike beings, and of the Cnetoids and the Cycloids as the more recent finners. It always puts me in mind of Shakespeare's magniloquence concerning "the Anthropophagi and men whose heads do grow beneath their shoulders, of antres vast and deserts idle," when he exhibited his learning in language which no one, however, can imitate, and which he makes the lady seriously incline and listen to, simply because she did not understand a word that was said. So it is with the overdone and continual changing of terms that now constantly occurs ; insomuch that the terms of plain science, instead of being simplified and brought within the reach of ordinary capacities, is made as uncouth and as

unintelligible as possible, and totally beyond the reach of those who have no collegiate education to boast of, and no good technical dictionary at hand to refer to.

The present age is most prone to this false estimate of learning and to public scientific display. If science, true science, yields to it, learning will very soon vanish from the face of the earth again, and nothing but monkish lore and the dark ages return.

There is a vast field open for research in Canada: it is yet a virgin soil, both as respects its moral and its physical cultivation. Therefore, plain facts are the best, and those made as level to the eye as possible; for the amusing mistakes which a would-be learned man makes, after a cursory perusal of anything scientific, only subject him to silent derision.

A very old casual acquaintance of mine, a sort of man holding a rather elevated rank, but originally from the great unwashed, who had risen by mere chance, aided by a little borough influence, was talking to me one day

about some property of his in Western Canada, which he fancied had rich minerals upon it. Accordingly, he had taken a preliminary Treatise on Mineralogy in hand, and puzzled his brains in order to converse learnedly. "My land," quoth he, "is Silesia, and has a great bed of sulphuret of pyrites." The poor gentleman, who had a vast opinion of himself and always contradicted everybody about everything, meant that his soil contained a deal of silica, and that iron pyrites was abundant in it.

The importance of the annual migration from Britain is best evidenced by the representation of the chief emigrant agent at Quebec, subjoined.

In all the great sea-ports of England, Ireland, and Scotland, there are emigrant agents appointed by the government, to whom application should always be made for information, by every emigrant who has not the advantage of friends in Canada to receive and guide him; and these gentlemen prevent the trouble, expense, loss of time, and fraud,

to which the poor settlers are subjected by the crimps and agents, with whom every sea-port abounds.

On their arrival in Canada, if ignorant of their way, they should apply at Quebec to the government principal agent, who is stationed there for the lower or eastern part of Canada, and he will give them either advice or passage, according to the nature of the case.

It is a pity that a rage exists for going as far west as possible at first, for this rage causes distress, and ends frequently by their being kidnapped into settling in the United States.

If, however, they are determined to go on to Western Canada, their course is either to pay their own way, or to obtain assistance from the government to send them on to Kingston, where another government agent for Western Canada is stationed; and, as this gentleman has now acted in that capacity for many years, he possesses a perfect knowledge of the country and its resources, and of the wants and objects of the settlers.

There is excellent land, and plenty of it to be obtained from the British American Land Company in Lower Canada, in that portion called "The Townships," which adjoin the states of Vermont and New York; and, excepting that the winters are longer, the climate more severe, it is as desirable as any other part of the province, and, in point of health, perhaps more so, as it is sufficiently far from the great river and lakes to make it less subject to ague; which, however, more or less, all new countries in the temperate zone, well forested and watered, are invariably the seat of, and which is increased in power and frequency in proportion to the neighbourhood of fresh water in large bodies, and the use of whiskey as a preventive.

From a statement of the number of emigrants to this colony for the last sixteen years, compiled by A. C. Buchanan, Esq., chief emigrant agent, it appears that, in the five years subsequently to 1829, the emigration from the British Isles was 165,793. From other sources, in the three years, from

1829 to 1832, the emigration exceeded that of the previous ten years—the numbers being respectively, 125,063 and 121,170. In 1832, the emigrants arrived reached the high number of 51,746 ; but the cholera of that year was of so fatal a character on the St. Lawrence, that the numbers in 1833 fell 22,062. This epidemic, coupled with the rebellions of '37 and '38, materially checked the increased emigration commenced in 1836. In 1838, the number was only 3,266, and in 1839, 7,500. But, since 1840, emigration has again recovered, and, during the period of navigation of 1845, it amounted to 27,354, of whom 2,612 arrived *via* the United States.

The United States, however, received by far the largest proportion of the emigration from Britain. At the port of New York alone, from 1st November, 1844, to 31st October, 1845, there arrived—

From England and Scotland	.	.	10,653
From Ireland	.	.	38,300
<hr/>			
Total at New York	.	.	48,953

The number of emigrants landed at the port of Quebec, in 1845, was 25,375.

NUMBER OF EMIGRANTS SINCE 1829.					
	'29 to '33	'34 to '38	'39 to '43	'44 to '45	Total.

	167,697	96,351	123,860	45,517	433,425

Upper Canada would seem to have received the largest share of the influx of population. The increase in the number of its inhabitants, between 1827 and 1843, is stated at 230,000.

The local government has for some few years past encouraged, although rather scantily, as Mr. Logan can, I dare say, testify, an exploration of the natural resources of the Canadas, as far as geology and mineralogy are concerned. Its medical statistics, its botany and zoology, will follow; and agriculture, that primary and most noble of all applications of the mind to matter, is

making rapid strides, by the formation of district and local societies, which will do infinitely more good than any system of government patronage for the advancement of the welfare of the people could devise.

The public works have also, for the first time, been placed under the control of the executive and legislative bodies by the formation of a board, which is itself also subject to the supervision of the government.

But much remains to be done on this important head. A melancholy error was committed in making the President, and consequently all the officers and *employés*, of the Board of Works, partizans of the ministry of the day; thus paralyzing the efforts of a zealous man, on the one hand, by the fear of dismissal upon any change of the popular will, and neutralizing his efforts whilst in office, by rendering his measures mere jobs.

This has been amended under Lord Metcalfe's administration; and it is to be hoped that the office of President of the Board of

Works will hereafter be one subjected to severe but not to vexatious scrutiny, and at the same time carefully guarded against political influence, and only rendered tenable with honour by the capacity of the person selected to fill it and of his subordinates.

Canada is, as I have written two former volumes to prove, a magnificent country. I doubt very much if Nature has created a finer country on the whole earth.

The soil is generally good, as that made by the decay of forests for thousands of years upon substrata, chiefly formed of alluvion or diluvion, the deposit from waters, must be. It is, moreover, from Quebec to the Falls of St. Mary, almost a flat surface, intersected and interlaced by numberless streams, and studded with small lakes, whilst its littorale is a river unparalleled in the world, expanding into enormous fresh water seas, abounding with fish.

If the tropical luxuries are absent, if its winters are long and excessively severe, yet it yields all the European fruits abundantly,

and even some of the tropical ones, owing to the richness of its soil and the great heat of the summer. Maize, or Indian corn, flourishes, and is more wholesome and better than that produced in the warm South. The crops of potato, that apple of the earth, as the French so justly term it, are equal, if not superior, to those of any other climate ; whilst all the vegetables of the temperate regions of the old world grow with greater luxuriance than in their original fields. I have successively and successfully cultivated the tomato, the melon, and the capsicum, in the open air, for several seasons, at Kingston and Toronto, which are not the richest or the best parts of Western Canada, as far as vegetation is concerned. Tobacco grows well in the western district, and where is finer wheat harvested than in Western Canada?—whilst hay, and that beauty of a landscape, the rich green sod, the velvet carpet of the earth, are abundant and luxuriant.

If the majesty of vegetation is called in question, and intertropical plants brought

forward in contrast, even the woods and trackless forests of Guiana, where the rankest of luxuriance prevails, will not do more than compete with the glory of the primeval woods of Canada. I know of nothing in this world capable of exciting emotions of wonder and adoration more directly, than to travel alone through its forests. Pines, lifting their hoary tops beyond man's vision, unless he inclines his head so far backwards as to be painful to his organization, with trunks which require fathoms of line to span them; oaks, of the most gigantic form; the immense and graceful weeping elm; enormous poplars, whose magnitude must be seen to be conceived; lindens, equally vast; walnut trees of immense size; the beautiful birch, and the wild cherry, large enough to make tables and furniture of.

Oh, the gloom and the glory of these forests, and the deep reflection that, since they were first created by the Divine fiat, civilized man has never desecrated them with his unsparing devastations; that a peculiar

race, born for these solitudes, once dwelt amidst their shades, living as Nature's woodland children, until a more subtile being than the serpent of Eden crept amongst them, and, with his glittering novelties and dangerous beauty, caused their total annihilation! I see, in spirit, the red hunter, lofty, fearless, and stern, stalking in his painted nudity, and displaying a form which Apollo might have envied, amidst the everlasting and silent woods; I see, in spirit, the bearded stranger from the rising sun, with his deadly arms and his more deadly fire-water, conversing with his savage fellow, and displaying the envied wealth of gorgeous beads and of gaudy clothing.

The scene changes, the proud Indian is at the feet of his ensnarer; disease has relaxed his iron sinews; drunkenness has debased his mind; and the myriad crimes and vices of civilized Europe have combined to sweep the aborigines of the soil from the face of the forest earth. The forest groans beneath the axe; but, after a few years, the scene again

changes ; fertile fields, orchards and gardens, delight the eye ; the city, and the town, and the village spires rise, and where two solitary wigwams of the red hunter were once alone occasionally observed, twenty thousand white Canadians now worship the same Great Author of the existence of all mankind.

And to increase these fields, these orchards, these gardens, these villages, these towns, and these cities, year after year, thirty thousand of the children of Britain cross the broad Atlantic : and what seeks this mass of human beings, braving the perils of the ocean and the perils of the land ? Competence and wealth ! The former, by prudence, is soon attainable ; the acquisition of the latter uncertain and fickle.

No free grants of land are now given, but the settler may obtain them upon easy terms from the government, or the Canada and British American companies.

The settler with a small capital cannot do better than purchase out and out. Installments are a bad mode of purchasing ; for, if

all should not turn out right, instalments are sometimes difficult to meet; and the very best land, in the best locations, as we shall hereafter see, is to be had from 7s. 6d., if in the deep Bush, as the forest is called; to 10s., if nearer a market; or 15s. and 20s., if very eligibly situated. Thus for two hundred pounds a settler can buy two hundred acres of good land, can build an excellent house for two hundred and fifty more, and stock his farm with another fifty, as a beginning; or, in other words, he can commence Canadian life for five hundred pounds sterling, with every prospect before him, if he has a family, of leaving them prosperous and happy. But he and they must work, work, work. He and all his sons must avoid whiskey, that bane of the backwoods, as they would avoid the rattlesnake, which sometimes comes across their path. Whiskey and wet feet destroy more promising young men in Canada than ague and fever, that scourge of all well watered woody countries; for the ague and fever seldom kill but with the assistance of the dram and of exposure.

Men nurtured in luxury or competence at home, as soon as the unfailing *ennui* arising from want of society in the backwoods begins to succeed the excitement of settling, too frequently drink, and in many cases drink from their waking hour until they sink at night into sottish sleep. This is peculiarly the case where there is no village nor town within a day's journey; and thus many otherwise estimable young men become habitual drunkards, and sink from the caste of gentlemen gradually into the dregs of society, whilst their wives and families suffer proportionably.

In Lower Canada, this vice does not prevail to the same extent as in the upper portion of the province. The French Canadians are not addicted to the vice of drinking ardent spirits as a people, although the lumberers and voyageurs shorten their lives very considerably by the use of whiskey. The *lumberers*, who are the cutters and conveyers of timber, pass a short and excited existence.

In the winter, buried in the eternal forest, far, far away from the haunts of man, they

chop and hew ; in the summer, they form the timber, boards, staves, &c., into rafts, which are conveyed down the great lakes and the rivers St. Lawrence and Ottawa to Quebec—on these rafts they live and have their summer being. Hard fare in plenty, such as salt pork and dough cakes ; fat and unleavened bread, with whiskey, is their diet. Tea and sugar form an occasional luxury. Up to their waists in snow in winter, and up to their waists in summer and autumn in water, with all the moving accidents by flood and field ; the occasional breaking-up of the raft in a rapid, the difficulty of the winter and spring transport of the heavy logs of squared timber out of the deep and trackless woods, combine to form a portion of the hard and reckless life of a lumberer, whose *morale* is not much better than his *physicale*.

Picture to yourself, child of luxury, sitting on a cushioned sofa, in a room where the velvet carpet renders a footfall noiseless, where art is exhausted to afford comfort, and where even the hurricane cannot disturb your peru-

sal of this work, a wood reaching without limit, excepting the oceans either of salt or fresh water which surround Canada, and where to lose the track is hopeless starvation and death; figure the giant pines towering to the clouds, gloomy and Titan-like, throwing their vast arms to the skyey influences, and making a twilight of mid-day, at whose enormous feet a thicket of bushes, almost as high as your head, prevents your progress without the pioneer axe; or a deep and black swamp for miles together renders it necessary to crawl from one fallen monarch of the wood onwards to the decaying and prostrate bole of another, with an occasional plunge into the mud and water, which they bridge; eternal silence reigning, disturbed only by your feeble efforts to advance; and you may form some idea of a red pine land, rocky and uneven, or a cedar swamp, black as night, dark, dismal, and dangerous.

Here, after you have hewed or crept your toiling way, you see, some yards or some hundred yards, as the forest is close or open,

before you, a light blue curling smoke amongst the dank and lugubrious scene ; you hear a dull, distant, heavy, sudden blow, frequent and deadened, followed at long intervals by a tremendous rending, crashing, overwhelming rush ; then all is silent, till the voice of the guardian of man is heard growling, snarling, or barking outright, as you advance towards the blue smoke, which has now, by an eddy of the wind, filled a large space between the trees.

You stand before the fire, made under three or four sticks set up tenwise, to which a large cauldron is hung, bubbling and seething, with a very strong odour of fat pork ; a boy, dirty and ill-favoured, with a sharp glittering axe, looks very suspiciously at you, but calls off his wolfish dog, who sneaks away.

A moment shows you a long hut, formed of logs of wood, with a roof of branches, covered by birch-bark, and by its side, or near the fire, several nondescript sties or pens, apparently for keeping pigs in, formed of branches close to the ground, either like a

boat turned upside down, or literally as a pigsty is formed, as to shape.

In the large hut, which is occasionally more luxurious and made of slabs of wood or of rough boards, if a saw-mill is within reasonable distance, and there is a passable wood road, or creek, or rivulet, navigable by canoes, you see some barrel or two of pork, and of flour, or biscuit, or whiskey, some tools, and some old blankets or skins. Here you are in the lumberer's winter home—I cannot call him woodman, it would disgrace the ancient and ballad-sung craft; for the lumberer is not a gentle woodman, and you need not sing sweetly to him to “spare that tree.”

The larger dwelling is the hall, the common hall, and the pig-sties the sleeping-places. I presume that such a circumstance as pulling off habiliments or ablution seldom occurs; they roll themselves in a blanket or skin, if they have one, and, as to water, they are so frequently in it during the summer, that I suppose they wash half the year unintentionally. Fat pork, the fattest of the fat, is

the lumberer's luxury; and, as he has the universal rifle or fowling-piece, he kills a partridge, a bear, or a deer, now and then.

I was exploring last year some woods in a newly settled township, the township of Seymour West, in the Newcastle district of Upper Canada, with a view to see the nakedness of the land, which had been represented to me as flowing with milk and honey, as all new settlements of course are said to do. I wandered into the lonely but beautiful forest, with a companion who owned the soil, and who had told me that the lumberers were robbing him and every settler around of their best pine timber. After some toiling and tracing the sound of the axes, few and far between, felling in the distance, we came upon the unvarying boy at cookery, the axe, and the dog.

My conductor at once saw the extent of the mischief going on, and, finding that the gang, although distant from the camp-fire, was numerous, advised that we should retrace our steps. We however interrogated the boy,

who would scarcely answer, and pretended to know nothing. The dog began to be inquisitive too, and one of the dogs we had with us venturing a little too near a savoury piece of pork, the nature of the young half-bred ruffian suddenly blazed out, and the axe was uplifted to kill poor Dash. I happened to have a good stick, and interfered to prevent dog-murder, upon which the wood-demon ejaculated that he would as soon let out my guts as the dog's, and therefore my companion had to show his gun; for showing his teeth would have been of little avail with the young savage.

The settlers are afraid of the lumberers; and thus all the finest land, near rivers, creeks, or transport of any kind, is swept of the timber to such an extent that you must go now far, far back from the Lakes, the St. Lawrence, or the Ottawa, before you can see the forest in its primeval grandeur.

This robbery has been carried on in so barefaced and extensive a manner, that the chief adventurer, usually a merchant or trader,

who supplies the axe and canoemen with pay in his shop goods, cent. per cent. above their value, becomes enriched.

The lumberer's life is truly an unhappy one, for, when he reaches the end of the raft's voyage, whatever money he may have made goes to the fiddle, the female, or the fire-water; and he starts again as poor as at first, living perhaps by a rare chance to the advanced age, for a lumberer, of forty years.

And a curious sight is a raft, joined together not with ropes but with the limbs and thews of the swamp or blue beech, which is the natural cordage of Canada and is used for scaffolding and packing.

A raft a quarter of a mile long — I hope I do not exaggerate, for it may be half a mile, never having measured one but by the eye—with its little huts of boards, its apologies for flags and streamers, its numerous little masts and sails, its cooking caboose, and its contrivances for anchoring and catching the wind by slanting boards, with the men who appear on its surface as if they were

walking on the lake, is curious enough ; but to see it in *drams*, or detached portions, sent down foaming and darting along the timber slides of the Ottawa or the restless and rapid Trent, is still more so ; and fearful it is to observe its *conducteur*, who looks in the rapid by no means so much at his ease as the functionary of that name to whom the Paris diligence is entrusted.

Numberless accidents happen ; the drams are torn to pieces by the violence of the stream ; the rafts are broken by storm and tempest ; the men get drunk and fall over ; and altogether it appears extraordinary that a raft put together at the Trent village for its final voyage to Quebec should ever reach its destination, the transport being at least four hundred and fifty miles, and many go much farther, through an open and ever agitated fresh water sea, and amongst the intricate channels of The Thousand Islands, and down the tremendous rapids of the Longue Sault, the Gallope, the Cedars, the Cascades, &c.

But a new trade has lately commenced on

Lake Ontario, which will break up some of the hardships of the rafting. Old steamboats of very large size, when no longer serviceable in their vocation, are now cut down, and perhaps lengthened, masted, and rigged as barques or ships, and treated in every respect like the Atlantic timber-vessels. Into these three-masters, these Leviathans of Lake Ontario, the timber, boards, staves, handspikes, &c., from the interior are now shipped, and the timber carried to the head of the St. Lawrence navigation.

One step more, and they will, as soon as the canals are widened, proceed from Lake Superior to London without a raft being ever made.

That this will soon occur is very evident; for a large vessel of this kind, as big as a frigate, and named the Goliath, is at the moment that I am writing preparing at Toronto, near the head of Lake Ontario, a thousand miles from the open sea, for a voyage direct to the West Indies and back again. Success to her! What with the railroad from

Halifax to Lake Huron, from the Atlantic Ocean to the great fresh ocean of the West—what with the electric telegraph now in operation on the banks of the Niagara by the Americans—what with the lighting of villages on the shores of Lake Erie with natural gas, as Fredonia is lit, and as the city of the Falls of Niagara, if ever it is built, will also be, there is no telling what will happen : at all events, the poor lumberer must benefit in the next generation, for the worst portion of his toils will be done away with for ever.

Settler, never become a lumberer, if you can avoid it.

But, as we have in this favourite hobby-horse style of ours, which causes description to start up as recollections occur, accompanied the lumberer on his voyage to that lumberer's Paradise, Quebec; whither he has conducted his charge to The Coves, for the culler to cull, the marker to mark, the skipper to ship, and the lumber-merchant to get the best market he can for it, so we shall return for a short time to

Lower Canada, to talk a little about settlement there.

As I hinted before, Lower Canada is too much decried as a country to re-commence the world in ; but the Anglo-Saxon and Milesian populace are nevertheless beginning to discover its value, and are very rapidly increasing both in numbers and importance. The French Canadian yeoman, or small farmer, has an alacrity at standing still ; it is only *le notaire* and *le médecin* that advance ; so that, if emigration goes on at the rate it has done since the rebellion, the old country folks will, before fifty more years pass over, outnumber and outvote, by ten times, Jean Baptiste, which is a pity, for a better soul than that merry mixture of bonhomie and phlegm, the French Canadian is, the wide world's surface does not produce. Visionary notions of *la gloire de la nation Canadienne*, instilled into him by restless men, who panted for distinction and cared not for distraction, misled the *bonnet rouge* awhile : but he has superadded the thinking cap since ; and, although he may not readily forget the

sad lesson he received, yet he has no more idea of being annexed to the United States than I have of being Grand Lama. In fact, I really believe that the merciful policy which has been shown, and the wise measure of making Montreal the seat of government, and thus practically demonstrating the advantage of the institutions of England by daily lessons in the heart of their dear country, has done more to recall the Canadians to a sense of the real value of the connexion with Great Britain than all the protocols of diplomatists, or all the powder that ever saltpetre generated, could have achieved.

Pursue a perfectly impartial course, as you ought and must do, towards the Canadians, and show them that they are as much British citizens as the people of Toronto are, and you may count upon their loyalty and devotion without fear. They know they never can be an independent nation; that folly has been dreamed out, and the fumes of the vision are evaporating.

They now know and feel that annexation

to the great Republic in their neighbourhood will swamp their nationality more effectively than the red or the blue coats of England can ever do, will desecrate their altars, will portion out their lands, will nullify their present importance, and render them an isolated race, forgotten and unsought for, as the Iroquois of the last century, who, from being the children and owners of the land, the true *enfants du sol*, are now—where? The soil, had it voice, could alone reply, for on its surface they are not.

We must never in England form a false estimate of the French Canadian, because a few briefless lawyers or saddle-bag medical men urged them into rebellion. Their feelings and spirit are not of the same *genre* as the feelings and spirit which animated the hideous soul of the *poissardes* and *canaille* of Paris in 1792. There is very little or no poverty in Lower Canada; every man who will work there, can work; and it is a nation rather of small farmers than of classes, with the ideas of independence which property,

however small, invariably generates in the human breast ; but with that other idea also which urges it to preserve ancient landmarks.

It is chiefly in the large towns and in their neighbourhood that the desire for exclusive nationality still exists, fostered by a rabid appetite for distinction in some ardent and reckless adventurers from the British ranks, who care little what is undermost so long as they are uppermost.

The hostility of the British settlers to the French is by no means so great as is so carefully and constantly described, and would altogether cease, if not kept continually alive by Upper Canadian demonstration, and that desire to rule exclusively which has so long been the bane of this fine colony.

It reminds one always of the morbid hatred of France, which existed thirty years ago in England, when Napoleon was believed, by the lower classes—ay, and by some of the higher too—to be Apollyon in earnest.

I remember an old lord of the old school, whose family honours were not of a hundred

years, and whose ancestors had been respectable traders, saying to me, a short time before he died, that Republican notions had spread so much from our peace with infidel France, that he should yet live to see those who possessed talent or energy enough among the middle class, take those honours which he was so proud of, and with the titles also, the estates.

Look, said he, at the absurd decoration showered on the *savans* of France, Baron Cuvier, for instance ; and he fell into a passion, and, being a French scholar, sang forth, in a paroxysm of gout, this *refrain* :—

“Travaillez, travaillez, bon tonnelier,
Racommodez, racommodez, ton Cuvier.”

And yet he was by no means an ignorant man—was at heart a true John Bull, and had travelled and seen the world. He was blinded by an unquenchable hatred of France, a hatred which has now ceased in England in consequence of the facility of intercourse, but which is revived in France against Eng-

land by those who think *la gloire* preferable to peace and honour.

The miserable feudal system in Lower Canada has kept the French population in abeyance ; that population is literally dormant, and the resources of the country unused ; a Seigneur, now often anything but a Frenchman, holds an immense tract, parcelled out into little slips amongst a peasantry, whose ideas are as limited as their lands. Generation after generation has tilled these patches, until they are exhausted ; and thus the few proprietors who have been able to emancipate themselves from the Seignoral thralldom sell as fast as they can obtain purchasers ; and the Seignories lapse, by failure of descent or by cutting off the entail, as it may be termed, under the dominion of foreigners, to the people.

It is surprising that British capitalists do not turn their attention more to Lower Canada, where land is thus to be bought very cheap, and which only requires manuring, a treatment that it rarely receives from a

Canadian, to bring it into heart again, and where the vast extent of the British townships, held in free and common soccage, opens such a field for the agriculturist.

These townships are rapidly opening up and improving, and the sales of the British American Land Company may in round numbers be said to average £20,000 a year, or more than 40,000 acres, averaging ten shillings an acre.

The day's wages for a labourer on a farm in Lower Canada may be stated at two shillings currency, about one shilling and eightpence sterling, with food and lodging; but, excepting in the towns and in the eastern townships, the labourers are Canadians, elsewhere chiefly Irish. In the large towns also they are Irish, and two shillings and sixpence is the usual price of a day's work at Montreal.

There is a great demand for English or Scotch labourers in the townships where provisions are reasonable, and the materials for building, either lime, stone, brick, or wood,

also very moderate in price from their abundance.

Cultivated, or rather cleared, farms may be purchased now near the settlements for about six pounds per acre, with very often dwelling and farms on them, and a clear title may be readily obtained, after inquiry at the registry office of the county, to see whether any mortgage or other encumbrance exist—a course always to be adopted, both in Upper and Lower Canada. A settler must take the precaution of tracing the original grant, and that the land, if he buys from an individual, is neither Crown nor Clergy reserve, nor set apart for school or any other public purposes. Never buy, moreover, of a squatter, or land on which a squatter is located, for the law is very favourable to these gentry.

A squatter is a man who, axe in hand, with his gun, dog, and baggage, sets himself down in the deep forest, to clear and improve; and this he very frequently does, both upon public and private property; and the Government is lenient, so that, if he makes well of it, he

generally has a right of pre-emption, or perhaps pays up only instalments, and then sells and goes deeper into the bush. Every way there is difficulty about squatted land, and very often the squatter will significantly enough hint that there is such a thing as a rifle in his log castle. Squatters are usually Americans, of the very lowest grade, or the most ignorant of the Irish, who really believe they have a right to the soil they occupy.

I do not profess to give an account of the Eastern Townships; the prospectus of the British American Land Company will do that; and, as I have never been through them entirely, so I could only advance assertion; but I believe that they are admirably adapted for English and Scotch settlers, and that, bounded as they are by the French Canadians on one side, and by the United States on the other, with every facility for roads, canals, and railways, they must become one of the richest most and important portions of Canada before half a century has passed over; but it will take that time, notwithstanding railways and

locomotives, to make Jean Baptiste a useful agriculturist; and the fly must be eradicated from the wheat before Lower Canada can ever come within a great distance of competition in the flour market with the upper province.

Take a steam-boat voyage from Quebec to Montreal, and you pass through French Canada; for, although there are very extensive settlements of the race below Quebec till they are lost in the rugged mountains of Gaspesia, yet the main body of *habitants* rest upon the low and tranquil shores of the St. Lawrence, for one hundred and eighty miles between the Castle of St. Lewis and the Cathedral of Montreal. The farm-houses, neat, and invariably whitewashed, line the river, particularly on the left bank, like a cantonment, and go back to the north for, at the utmost, ten or twelve miles into the then boundless wilderness.

The cultivated ground is in narrow slips, fenced by the customary snake fence, which is nothing more than slabs of trees split coarsely

into rails, and set up lengthways in a zig-zag form to give them stability, with struts, or riders, at the angles, to bind them. These farms are about nine hundred feet in width, and four or five miles in depth, being the concessions or allotments made originally by the *seigneurs* to the *censitaires*, or tillers of the soil. Every here and there, a long road is left, with cross ones, to obtain access to the farms, much in the same way, but not near so conveniently, or well done, as the concession lines in Upper Canada, which embrace large spaces of a hundred acre or two hundred acre lots, including many of these lots, and giving a sixty-six feet or a forty foot road, as the case may be, and thus dividing the country into a series of large parallelograms, and making every farm accessible.

Each Lower French Canadian farmer is an independent yeoman, excepting as bound to the soil, and to certain seignorial dues and privileges, which are, however, trifling, and far from burthensome. Taxes are unknown,

and they cheerfully support their priesthood.

It is not generally known in England that the feudal tenure—although very laughable and absurd at this time of day, and from which some seigneurs, but never those of unmixed French blood, are disposed to claim titles equivalent to the baronage of England, with incomes of about a thousand a year, or at most two, and manorial houses, resembling very much a substantial Buckinghamshire grazier's chateau—was originally established by the French monarchs for wise, highly useful, and benevolent purposes.

These seigneuries were parcelled out in very large tracts of forest along the banks of the St. Lawrence, or the rivers and bays of Lower Canada, on the condition that they should be again parcelled out among those who would engage to cultivate them in the strips above-mentioned. Thus re-granted, the *seigneur* could not eject the *habitant*, but was allowed to receive a nominal or feudal rent from the vassal, and the usual *droits*.

These droits are, first, the barbarous “*lods et ventes*,” or one thirteenth of the money upon every transfer which the *habitant* makes by sale only; but the original rent can never be raised, whatever value the land may have attained. The rights of the mill, that old European appanage of the lord of the soil, were also reserved to the seigneur, who alone can build mills within his domain, or use the waters within his boundaries for mechanical purposes; but he must erect them at convenient distances, and must make and repair roads. The miller, therefore, takes toll of the grist, which is another source of seignorial revenue, although not a very great one, for the toll is, excepting the miller’s thumb rights, not very large.

The crown of England is the lord paramount or suzerain, and demands a tax of one fifth of the purchase-money of each seignory sold or transferred by the lord of the manor.

By law, the lands cannot be subdivided, and if a seigneurie is sold it cannot be sold in parts, nor can any compromise with the

habitants for rent, or any other claim or incumbrance, be made.

An institution like this paralyzes the resident, paralyzes the settler, and destroys that aristocracy for whose benefit it was created; for it prevents the lord of the manor from ever becoming rich, or taking much interest in the improvement of his domain; and thus every thing continues as it was a hundred years ago. The British emigrant pauses ere he buys land thus enthralled; and almost all the old French families, who dated from Charlemagne, Clovis, or Pepin, from the Merovingian or Carlovingian monarchies, have disappeared and dwindled away, and their places have been supplied by the more enterprising, or the *nouveau riche* men of the old world, or by restless, acute lawyers, and metaphysical body-curers.

It was no wonder, therefore, that, upon the removal of the seat of government from Toronto, and the appointment of a governor-general untrammelled by the lieutenant governorship of Western Canada, over which he had

had before no control, that it should be considered desirable by degrees to introduce the English land system throughout Canada, and that parliamentary inquiry should be made into the necessity of abolishing all feudal taxation. In Montreal this has been done, and, as the seignoral rights of succession lapse, it will soon be done every where, for the recent enactments have emancipated many already.

But no sensible or feeling mind will desire to see the French Canadian driven to break up all at once habits formed by ages of contentment; and, as it does not press upon them beyond their ready endurance, why should we, to please a few rich capitalists or merchants, suddenly force a British population into the heart of French Canada?

Jean Baptiste is too good a fellow to desire this. On our part, we should not forget his truly amiable character; we should not forget the services he rendered to us, when our children fought to drive us from our last hold on the North American continent; we should

not forget his worthy and excellent priesthood ; nor should we ever lose sight of the fact, that he is contented under the old system. Above all, we should never forget that he fought our battles when his Gallic sires joined our revolted children.

I feel persuaded that, if an unhappy war must take place between the United States and England, the French Canadians will prove, as they did before on a similar occasion, loyal to a man.

All animosity, all heart-burning, will be forgotten, and the old French glory will shine again, as it did under De Salaberry.

Ma foi, nous ne sommes pas perdus, encore ; and some hero of the war has only to rouse himself and cry, as Roland did,

Suivez, mon panage éclatant,
Français ainsi que ma bannière ;
Qu'il soit point du ralliement,
Vous savez tous quel prix attend
Le brave, qui dans la carrière,
Marche sur le pas de Roland.
Mourons pour notre patrie
C'est le sort le plus beau et le plus digne d'envie.

CHAPTER III.

A journey to the Westward.

We must leave Roncesvalles and La Gloire awhile, and, instead of riding a war horse, canter along upon the hobby, or a good serviceable Canadian pony, the best of all hobbies for seeing the Canadian world, and on which mettlesome charger we can much better instruct the emigrant than by long prosings about political economy and systematic colonisation.

So, *en avant* ! I am going to relate the incidents of a journey last summer to the Westward, and to give all the substance of my observations on men and things made therein.

I left Kingston on the 26th of June, in the Princess Royal mail steamer, at 8 p. m., the

usual hour of starting being seven, for Toronto; the weather unusually cold.

This fine boat constitutes, with two others, the City of Toronto and the Sovereign, the royal mail line between Kingston and Toronto. All are built nearly alike, are first class sea-boats, and low pressure; they combine, with the Highlander, the Canada, and the Gildersleeve, also splendid vessels, to form a mail route to Montreal—the latter boats taking the mail as far as Coteau du Lac, forty-five miles from Montreal, on which route a smaller vessel, the Chieftain, plies, wherein you sleep, at anchor, or rather moored, till daylight, if going down, or going upwards, on board the mail boat.

Passengers go from Montreal to Kingston by the mail route in twenty-four hours, a distance of 180 miles; a small portion, between the Cascades Rapids and the Coteau being traversed in a coach, on a planked road as smooth as a billiard-table.

From Kingston to Toronto, or nearly the whole length of Lake Ontario, takes sixteen

hours, the boat leaving at seven, and arriving about or before noon next day; performing the passage at the rate of eleven miles an hour, exclusively of stoppages.

The transit between Montreal and Kingston is at the rate, including stoppage for daylight, the river being dangerous, of eight miles an hour; thus, in forty hours, the passenger passes from the seat of government to the largest city of Western Canada most comfortably, a journey which twenty years ago it always took a fortnight, and often a month, to accomplish, in the most precarious and uncomfortable manner—on board small, roasting steamers, crowded like a cattle-pen—in lumbering leathern conveniences, miscalled coaches, over roads which enter not into the dreams of Britons—by canoes—by bateaux, (a sort of coal barges,)—by schooners, where the cabin could never permit you to display either your length, your breadth, or your thickness, and thus reducing you to a point in creation, according to Euclid and his commentators.

Your *compagnons de voyage*, on board a bateau or Durham boat, which was a *monstre* bateau, were French Canadian voyageurs, always drunk and always gay, who poled you along up the rapids, or rushed down them with what will be will be.

These happy people had a knack of examining your goods and chattels, which they were conveying in the most admirable manner, and with the utmost *sang-froid*; but still they were above stealing—they only tapped the rum cask or the whiskey barrel, and appropriated any cordage wherewith you bound your chests and packages. I never had a chest, box, or bale sent up by bateau or Durham boat that escaped this rope mail.

By the by, the Durham boat, a long decked barge, square ahead, and square astern, has vanished; Ericson's screw-propellers have crushed it. It was neither invented by nor named after Lord Durham, but was as ancient as Lambton House itself.

The way the conductors of these boats found out vinous liquors was, as brother Jonathan so playfully observes, a *caution*.

I have known an instance of a cask of wine, which, for security from climate, had an outer case or cask strongly secured over it, with an interior space for neutralizing frost or heat, bored so carefully that you could never discover how it had been effected, and a very considerable quantum of beverage extracted.

I once had a small barrel, perhaps twenty gallons of commissariat West India ration rum, the best of all rum for liqueurs, sucked dry. Of course, it had leaked, but I never could discover the leak, and it held any liquid very well afterwards.

I know the reader likes a story, and as this is not by any means an historical or scientific work, excepting always the geological portion thereof, I will tell him or her, as the case may be, a story about ration rum.

There was a funny fellow, an Irish auctioneer at Kingston, some years ago, called Paddy Moran, whom all the world, priest and parson, minister and methodist, soldier and sailor, tinker and tailor, went to hear when he mounted his rostrum.

He was selling the goods of a quarter-master-general who was leaving the place. At last he came to the cellar and the rum. "Now, gintlemin," says Moran, "I advise you to buy this rum, 7s. 6d. a gallon! going, going! Gintlemin, I was once a sojer—don't laugh, you officers there, for I was—and a sirjeant into the bargain. It wasn't in the Irish militia—bad luck to you, liftenant, for laughing that way, it will spoil the rum! I was the tip-top of the sirjeants of the regiment—long life to it! Yes, I was quarter-master-sirjeant, and hadn't I the sarving out of the rations; and didn't I know what good ration rum was; and didn't I help meself to the prime of it! Well, then, gintlemin and ladies—I mane, Lord save yees, ladies and gintlemin—if a quarter-master-sirjeant in the army had good rum, what the devil do you think a quarter-master-general gets?"

The rum rose to fifteen shillings per gallon at the next bid.

You can have every convenience on board a Lake Ontario mail-packet, which is about as

large as a small frigate, and has the usual sea equipment of masts, sails, and iron rigging. The fare is five dollars in the cabin, or about £1 sterling ; and two dollars in the steerage. In the former you have tea and breakfast, in the latter nothing but what is bought at the bar. By paying a dollar extra you may have a state-room on deck, or rather on the half-deck, where you find a good bed, a large looking-glass, washing-stand and towels, and a night-lamp, if required. The captains are generally part owners, and are kind, obliging, and communicative, sitting at the head of their table, where places for females and families are always reserved. The stewards and waiters are coloured people, clean, neat, and active ; and you may give sevenpence-halfpenny or a quarter-dollar to the man who cleans your boots, or an attentive waiter, if you like ; if not, you can keep it, as they are well paid.

The ladies' cabin has generally a large cheval glass and a piano, with a white lady to wait, who is always decked out in flounces

and furbelows, and usually good-looking. All you have got to do on embarking or on disembarking is to see personally to your luggage; for leaving it to a servant unacquainted with the country will not do. At Kingston, matters are pretty well arranged, and the carters are not so very impudent, and so ready to push you over the wharf; but at Toronto they are very so so, and want regulating by the police; and in the States, at Buffalo particularly, the porters and carters are the most presuming and insolent serviles I ever met with; they rush in a body on board the boat, and respect neither persons nor things.

I knew an American family composed chiefly of females, travelling to the Falls; and these ladies had their baggage taken to a train going inland, whilst they were embarking on board the British boat which was to convey them to Chippewa in Canada.

The comfort of some of these boats, as they call them, but which ought to be called ships, is very great. There is a regular drawing-room on board one called the Chief Justice

where I saw, just after the horticultural show at Toronto, pots of the most rare and beautiful flowers, arranged very tastefully, with a piano, highly-coloured nautical paintings and portraits, and a *tout ensemble*, which, when the lamps were lit, and conversation going on between the ladies and gentlemen then and there assembled, made one quite forget we were at sea on Lake Ontario, the “Beautiful Lake,” which, like other beautiful creations, can be very angry if vexed.

The Americans have very fine steam vessels on their side of the lake, but they are flimsily constructed, painted glaringly, white, and green, and yellow, without comfort or good attendance, and with a devil-may-care sort of captain, who seems really scarcely to know or to care whether he has passengers or has not, a scrambling hurried meal, and divers other unmentionables.

The American gentry always prefer the British boats, for two good reasons; they see Queen Victoria’s people, and they meet with the utmost civility, attention, and comfort.

They sit down to dinner, or breakfast, or tea, like Christian men and women, where there is no railway eating and drinking; where due time is spent in refreshing the body and spirits; and where people help each other, or the waiters help them, at table, without a scramble, like hogs, for the best and the most—a custom which all travelled Americans detest and abominate as much as the most fastidious Englishman.

It is not unusual at hotel dinners, or on board steamers, to see a man, I cannot call him a gentleman, sitting next a female, totally neglect her, and heap his plate with fish, with flesh, with pie, with pudding, with potato, with cranberry jam, with pickles, with salad, with all and every thing then within his reach, swallow in a trice all this jumble of edibles, jump up and vanish.

Can such a being have a stomach, or a digestion, and must he not necessarily, about thirty-five years of age, be yellow, spare, and parchment-skinned, with angular projections, and a prodigious tendency to tobacco?

An American gentleman—mind, I lay a stress upon the second word—never bolts his victuals, never picks his teeth at table, never spits upon the carpet, or guesses; he knows not gin-sling, and he eschews mint-julep; but he does, I am ashamed to say, admire a sherry cobbler, particularly if he does not get a second-hand piece of vermicelli to suck it through. Reader, do you know what a sherry cobbler is? I will enlighten you. Let the sun shine at about 80° Fahrenheit. Then take a lump of ice; fix it at the edge of a board; rasp it with a tool made like a drawing knife or carpenter's plane, set face upwards. Collect the raspings, the fine raspings, mind, in a capacious tumbler; pour thereon two glasses of good sherry, and a good spoonful of powdered white sugar, with a few small bits, not slices, but bits of lemon, about as big as a gooseberry. Stir with a wooden macerator. Drink through a tube of macaroni or vermicelli. *C'est l'eau benite*, as the English lord said to the *garçon* at the Milles Colonnes, when he first tasted real *parfait amour*.—*C'est beaucoup mieux*,

Milor, answered the waiter with a profound reverence.

Gin-sling, cock-tail, mint-julep, are about as vulgar as blue ruin and old tom at home; but sherry cobbler is an affair of consideration—only never pound your ice, always rasp it.

It is a custom on board the Canadian steamers for gentlemen to call for a pint of wine at dinner, or for a bottle, according to the strength of the party; but it is a custom more honoured in the breach than the observance; for sherry and port are the usual stock, both fiery as brandy, and costing the moderate price of seven shillings and sixpence a bottle, the steward having laid the same in at about one shilling and eight pence, or at most two shillings. Why this imposition, the only one you meet with in travelling in Canada at hotels or steamboats, is perpetrated and perpetuated, I could never learn.

Many American gentlemen, however, encourage it, and have told me that they do so because they get no good port in the States. Ale and porter are charged two shillings and

sixpence a bottle, which is double their worth. Be careful also not to drink freely of the iced water, which is always supplied *ad libitum*. Few Europeans escape the effects of water-drinking when they land at Quebec, Montreal, Kingston, Toronto, &c. There is something peculiar, which has never yet been satisfactorily explained by medical men, in the sudden attack upon the system produced by the waters of Canada: this is sometimes slight, but more often lasts several days, and reduces the strength a good deal. Iced water is worse, and produces country cholera. The Americans use ice profusely, and drink such draughts of iced water, that I have been astonished at the impunity with which they did so.

Perhaps the change from a moist sea atmosphere to the dry and desiccating air of Canada, where iron does not rust, may be one cause of the malady alluded to, and another, in addition to the water, the difference of cookery; for here, at public tables and on board the boats generally, where black cooks prevail, all is butter and grease.

But the change of climate is undoubtedly great. I had been long an inhabitant of Upper Canada, and fancied myself seasoned ; but, having returned to England, and spending afterwards two or three years in the excessively humid air of the sea-coast of Newfoundland at St. Johns, where I became somewhat stout, on my return to Upper Canada, for want of a little preparatory caution in medicine, although naturally of a spare habit, I was seized with a violent bleeding at the nose, which baffled all remedies for several months, until artificial mineral water and a copious use of solutions of iron stopped it. No doubt this prevented the fever of the lakes, and was owing to the dryness of the air. I mention this to caution all new-comers, young and old, to take timely advice and medicine.

There is another complaint in Upper Canada, which attacks the settler very soon after his arrival, especially if young, and that is worms ; a disorder very prevalent at all times in Canada, particularly among the poorer classes, and probably owing to food.

These, with ague and colic, or country cholera, are the chief evils of the clime; few are, however, fatal, excepting the lake fever, and that principally among children.

The sportsman should recollect, in so marshy and woody a country, subject as it is to the most surprising alternations of temperature, that instead of minding that celebrated rule, "Keep your powder dry," he should read, "Keep your feet dry." Dry feet and the avoidance of sitting in wet or damp clothes, or drinking iced water when hot, or of cooling yourself in a delicious draught of air when in a perspiration, are the best precautions against ague, fever, colic, or cholera—in a country where the thermometer reaches 90° in the shade, and sometimes 110° , as it did last summer, and 27° below zero in the winter, with rapid alternations embracing such a range of the scale as is unknown elsewhere.

In the country places, in travelling, you will invariably find that windows are very little attended to, and that the head of your

bed, or the side of it, is placed against a loosely-fitting broken sash. The night-fogs and damps are highly dangerous to newcomers ; so act accordingly.

Fleas and bugs, and “such small deer,” you must expect in every inn you stop at, even in the cities ; for it appears—and indeed I did not know the fact until this year—that bugs are indigenous, *native to the soil*, and breed in the bark of old trees ; so that if you build a new house, you bring the enemy into your camp. Nothing but cleanliness and frequent whitewash, colouring, paint, and soft soap, will get rid of them. If it were not for the strong smell of red cedar and its extreme brittleness, I would have my bedstead of that material ; for even the iron bedsteads, in the soldiers’ barracks, become infested with them if not painted often. Red cedar they happily eschew.

Travellers may talk as they please of mosquitoes being the scourge of new countries ; the bugs in Canada are worse, and the black fly and sand-fly superlatively superior in an-

noyance. The black fly exists in the neighbourhood of rivers or swamps, and attacks you behind the ear, drawing a pretty copious supply of blood at each bite. The sand-fly, as its name imports, exists in sandy soil, and is so small that it cannot be seen without close inspection ; its bite is sharp and fiery.

Then the farmer has the wheat-fly and the turnip-fly to contend against ; the former has actually devoured Lower Canada, and the latter has obliged me in a garden to sow several successive crops. The melon-bug is another nuisance ; it is a small winged animal, of a bright yellow colour, striped with black bars, and takes up its abode in the flower of the melon and pumpkin, breeding fast, and destroying wherever it settles, for young plants are literally eaten up by it.

The grub, living under ground in the daytime, and sallying forth at night, is a ferocious enemy to cabbage-plants, lettuce, and most of the young, tender vegetables ; but, by taking a lantern and a pan after dark, the gentlemen can be collected whilst on their

tour, and poultry are very fond of them. Last year, the potato crop failed throughout Canada. What a singular dispensation!—for it alike suffered in Europe, and no doubt the malady was atmospheric. The hay crop, too, suffered severely; but still, by a merciful Providence, the wheat and corn harvest was ample, and gathered in a month before the customary time.

By the word corn I mean oats, rye, and barley; but in the Canadas and in the United States that word means maize or Indian-corn only, which in Canada, last summer, was not, I should think, even an average crop. It is extensively used here for food, as well as buckwheat, and for feeding poultry.

But to our journey westward. I arrived at Toronto on the 27th of June, and found the weather had changed to variable and fine.

On steaming up the harbour, I was greatly surprised and very much pleased to see such an alteration as Toronto has undergone for the better since 1837. Then, although a flourishing village, be-citied, to be sure, it

was not one third of its present size. Now it is a city in earnest, with upwards of twenty thousand inhabitants — gas-lit, with good plank side-walks and macadamized streets, and with vast sewers, and fine houses, of brick or stone. The main street, King Street, is two miles and more in length, and would not do shame to any town, and has a much more English look than most Canadian places have.

Toronto is still the seat of the Courts of Law for Western Canada, of the University of King's College, of the Bishopric of Toronto, and of the Indian Office. Kingston has retained the militia head-quarter office, and the Principal Emigrant Agency, with the Naval and Military grand depôts; so that the removal of the seat of Government to Montreal has done no injury to Toronto, and will do very little to Kingston: in fact, I believe firmly that, instead of being injurious, it will be very beneficial. The présence of Government at Kingston gave an unnatural stimulus to speculation among a population very far from wealthy; and buildings of the most

frail construction were run up in hundreds, for the sake of the rent which they yielded temporarily.

The plan upon which these houses were erected was that of mortgage; thus almost all are now in possession of one person who became suddenly possessed of the requisite means by the sale of a large tract required for military purposes. But this species of property seldom does the owner good in his lifetime; and, if he does reclaim it, there is no tenant to be had now; so that the building decays, and in a very short time becomes an incumbrance. Mortgages only thrive where the demand is superior and certain to the investment; and then, if all goes smoothly, mortgager and mortgagee may benefit; but where a mechanic or a storekeeper, with little or no capital, undertakes to run up an extensive range of houses to meet an equivocal demand, the result is obvious. If the houses he builds are of stone or brick, and well finished, the man who loans the money is the gainer; if they are of

wood, indifferently constructed and of green materials, both must suffer. So it is a speculation, and, like all speculations, a good deal of repudiation mixes up with it.

There are two good houses of entertainment for the gentleman traveller in Toronto; the Club House in Chewett's Buildings and Macdonald's Hotel. In the former, a bachelor will find himself quite at home; in the latter, a family man will have no reason to regret his stay.

But servants at Toronto—by which I mean *attendants*—are about on a par with the same race all over Canada. The coloured people are the best, but never make yourself dependent on either; for, if you are to start by the stage or the steamer, depend on your watch, instead of upon your boots being cleaned or your shaving-water being ready. In the latter case, shave with cold water by the light of your candle, lit by your own lucifer match. They are civil, however, and attentive, as far as the very free and easy style of their acquirements will permit them;

for a cook will leave at a moment's notice, if she can better herself; and any trivial occurrence will call off the waiter and the boots. The only punctual people are the porters; and, as they wear glazed hats, with the name of the hotel emblazoned thereon, frigate-fashion, you can always find them.

An excellent arrangement is the omnibus attached to the hotels in Canada West, which conveys you cost-free to and from the steamboat, and a very comfortable wooden convenience it is, resembling very much the vans which, in days of yore, plied near London.

My first start from Toronto was to Ultima Thule, Penetanguishene, a locality scarcely to be found in the maps, and yet one of much importance, situate and being north-north-west of the city some hundred and eight miles, on Lake Huron.

The route is per coach to St. Alban's, thirty and three miles, along Yonge Street, of which about one-third is macadamized from granite boulders; the rest mud and etceteras, too numerous to mention. Yonge Street is a continuous settlement, with an occasional

sprinkling of the original forest. The land on each side is fertile, and supplies Toronto market.

It rises gradually by those singular steps, or ridges, formerly banks or shores of antediluvian oceans, till it reaches the vicinity of the Holland river, a tortuous, sluggish, marshy, natural canal, flowing or lazily creeping into Lake Simcoe, at an elevation of upwards of seven hundred and fifty feet above Lake Ontario, and emptying itself into Lake Huron by a series of rapids, called the Matchedash or Severn River.

The first quarter of the route to St. Alban's is a series of country-houses, gentlemen's seats, half-pay officers' farms, prettily fenced, and pleasant to the sight: the next third embraces Thornhill, a nice village in a hollow; Richmond Hill, with a beautiful prospect and detached settlements: the ultimate third is a rich, undulating country, inhabited by well-to-do Quakers, with Newmarket on their right, and looking for all the world very like "dear home," with orchards, and as rich corn-fields and pastures as may be

seen any where, backed, however, by the eternal forest. It is peculiarly and particularly beautiful.

A short distance before reaching St. Alban's, which is quite a new village, the road descends rapidly, and the ground is broken into hummocks.

But I must not forget Bond's Lake, a most singular feature of this part of the road, which, perhaps, I shall treat of in returning from Penetanguishene, as I am now in a hurry to get to St. Alban's.

Here, where all was scrub forest in 1837, are a little street, a house of some pretension occupied by Mr. Laughton, the enterprising owner of the Beaver steamboat, plying on Lake Simcoe, and two inns.

I stopped for the night, for Yonge Street is still a tiresome journey, although only a stage of thirty three miles, at Winch's Tavern. This is a very good road-side house, and the landlord and landlady are civil and attentive. Before you go to roost, for stopping by the way-side is pretty much like

roosting, as you must be up with Chanticleer, you can just look over Mr. Laughton's paling, and you will see as pretty a florist's display as may be imagined. The owner is fond of flowers, and he has lots of them, and, when you make his acquaintance afterwards in the Beaver, you will find that he has lots of information also. But I did not go in the Beaver, which ship "wharfs" some two or three miles further ahead, at Holland River Landing, commonly called "the Landing," par excellence. Here flies, mosquitoes, ague, and other plagues, are so rife, that all attempts at settlement are vanity and vexation of spirit.

So, being willing to see what had happened in Gwillimbury since 1837, I took a waggon and the land road, and went off as day broke, or rather before it broke, about four a.m., in a deep gray mist. The waggon should be described, as it is the best *voiture* in Western Canada.

Four wheels, of a narrow tire, are attached without any springs to a long body, formed

of straight boards, like a piano-case, only more clumsy; in which, resting on inside rims or battens, are two seats, with or without backs, generally without, on which, perhaps, a hay-cushion, or a buffalo-skin, or both, are placed. Two horses, good, bad, or indifferent, as the case may be, the positive and comparative degrees being the commonest, drag you along with a clever driver, who can turn his hand to chopping, carpentering, wheelwright's work, playing the fiddle, drinking, or any other sort of thing, and is usually an Irishman or an Irishman's son. For two dollars and a half a day he will drive you to Melville Island, or Parry's Sound, if you will only stick by him; and he jogs along, smoking his *dudeen*, over corduroy roads, through mud holes that would astonish a cockney, and over sand and swamp, rocks and rough places enough to dislocate every joint in your body, all his own being ankylosed or used to it, which is the same thing, in the dictionary.

He will keep you *au courant*, at the same

time, tell the name of every settler and settlement, and some good stories to boot. He is a capital fellow, is "Paddy the driver," generally a small farmer, and always has a contract with the commissariat.

The first place of any note we came to, as day broke out of the blue fog which rose from the swampy forest, was Holland River Bridge, an extraordinary structure, half bridge, half road, over a swamp created by that river in times long gone by; a level tract of marsh and wild rice as far as the eye can reach, full of ducks and deer, with the Holland River in the midst, winding about like a serpentine canal, and looking as if it had been fast asleep since its last shake of the ague.

Crossing this bridge-road, now in good order, but in 1837 requiring great dexterity and agility to pass, you come to a slight elevation of the land, and a little village in West Gwillimbury, which, I should think, is a capital place to catch lake-fever in.

The road to it is good, but, after passing

it and turning northwards, is but little improved, being very primitive through the township of Innisfil. However, we jogged along in mist and rain, on the 29th of June, and saw the smoke, ay, and smelt it too, of numerous clearings or forest burnings, indicating settlement, till we reached Wilson's Tavern, where, every body having the ague, it was somewhat difficult to get breakfast. This is thirteen miles from St. Alban's.

Having refreshed, however, with such as it was, we visited Mr. Wilson's stable, and saw a splendid stud horse which he was rearing, and as handsome a thorough-bred black as you could wish to see in the backwoods.

Proceeding in rain, we drove, by what in England would be called an execrable road, through the townships of Innisfil and Vespra to Barrie, the capital hamlet of the district of Simcoe.

On emerging from the woods three or four miles from Barrie, Kempenfeldt Bay suddenly appears before you, and if the road was better, a more beautiful ride there is not

in all broad Canada. Fancy, however, that, without any Hibernicism, the best road is in the water of the lake. This is owing to the swampy nature of the land, and to the circumstance that a belt of hard sand lines the edge of the bay; so Paddy drove smack into the water of Kempenfeldt, and, as he said, sure we were travelling by water every way, for we had a deluge of rain above, and Lake Simcoe under us.

But nathless we arrived at Barrie by midday, a very fair journey of twenty-eight miles in eight hours, over roads, as the French say, *inconceivable*; and alighted like river gods at the Queen's Arms, J. Bingham, Barrie.

Barrie, named after the late commodore, Sir Robert Barrie, is no common village, nor is the Queen's Arms a common hostel. It is a good, substantial, stone edifice, fitted up and kept in a style which neither Toronto nor Kingston, nay, nor Montreal can rival, as far as its extent goes. I do assure you, it is a perfect paradise after the road from St.

Alban's; and, as the culinary department is unexceptionable, and the beds free from bugs, and all neatness and no noise, I will award Mrs. Bingham a place in these pages, which must of course immortalize her. They are English people; and, when I last visited their house, in 1837, had only a log-hut: now they are well to do, and have built themselves a neat country-house.

When I first saw Barrie, or rather before Barrie was, as I passed over its present site, in 1831, there was but one building and a little clearance. In 1846, it is fast approaching to be a town, and will be a city, as it is admirably placed at the bottom of an immense inlet of Lake Simcoe, with every capability of opening a communication with the new settlements of Owen Sound and St. Vincent, and the south shore of Lake Huron.

It has been objected, to this opinion respecting Barrie, that the Narrows of Lake Simcoe is the proper site for "The City of the North," as the communication by land, instead of being thirty-six miles to Penetanguish-

shene, the best harbour on Lake Huron, is only fourteen, or at most nineteen miles, the former taking to Cold Water Creek, and the latter to Sturgeon Bay; but then there is a long and somewhat dangerous transit in the shallowest part of the Georgian Bay of Lake Huron to Penetanguishene.

If a railroad was established between Barrie and the naval station, this would be not only the shortest but the safest route to Lake Huron; for, if Sturgeon Bay is chosen, in war-time the transit trade and the despatch of stores for the government would be subjected to continual hindrance and depredation from the multitude of islands and hiding-places between Sturgeon Bay and Penetanguishene; whilst, on the other hand, no sagacious enemy would penetrate the country from Sturgeon Bay and leave such a stronghold as Penetanguishene in his rear, whereby all his vessels and supplies might be suddenly cut off, and his return rendered impracticable.

Barrie is, therefore, well chosen, both as a transit town and as the site of naval opera-

tions on Lake Simcoe, whenever they may be necessary.

For this reason, government commenced the military road between Barrie and Penetanguishene, and settled it with pensioned soldiers, and also settled naval and military retired or half-pay officers all round Lake Simcoe. But, as we shall have to talk a good deal about this part of the country, and I must return by the road, let us hasten on to our night's lodging at the Ordnance Arms, kept by the ancient widow of J. Bruce, an old artilleryman.

Since 1837, the road, then impassable for anything but horses or very small light wag-gons, has been much improved, and Paddy drove us on, after dinner at Bingham's, through the heavy rain *à merveille* !

When I passed this road before, what a road it was ! or, in the words of the eulogist of the great Highland road-maker, General Wade,

“ Had you seen this road, before it was made,
You would have lift up your eyes and blessed”
General somebody.

It was necessary, as late as 1837, to take a horse; and, placing your valise on another, mount the second with a guide. My guide was always a French Canadian named François; and many an adventure in the interminable forest have we experienced together; for if François had lost his way, we should have perhaps reached the Copper-mine River, or the Northern Frozen Ocean, and have solved the question of the passage from the Atlantic to the Pacific, or else we should have had a certain convocation of politic wolves or bears, busy in rendering us and our horses invisible; for, after all, they have the true receipt of fern seed, and you can walk about, after having suffered transmigration into their substance, without its ever being suspected that you were either an officer of engineers or a Franco-Canadian guide.

An old and respected officer, once travelling this bridle road with François and myself, and mounted on a better horse than either of ours, which was lent to him by the Assistant Commissary-General stationed at Penetan-

guishene, got ahead of us considerably, and, by some accident, wandered into the gloomy pine forest. Missing him for a quarter of an hour, I rode as fast as my horse, which was not encumbered with baggage, would go ahead, and, observing fresh tracks of a horse's shoes in the mud, followed them until I heard in the depths of the endless and solemn woods faint shouts, which, as I came nearer to them, resolved themselves into the syllables of my name. I found my chief, and begged him never again, as he had never been there before, to think of leaving us. Had he gone out of sound, his fate would have been sealed, unless the horse, used as it was to the path, had wandered into it again; but horses and cattle are frequently lost in these solitudes, and, perhaps being frightened by the smell of the wild beasts, or, as man always does when lost, they wander in a circle, and thus frequently come near the place from which they started, but not sufficiently so to hit the almost invisible path.

But although the road, excepting in the

middle of summer, is still indifferent, it is perfectly safe, and a lady may now go to Penetanguishene comparatively comfortably.

Bruce's tavern is a respectable log-house, twelve miles from Barrie; and here you can get the usual fare of ham, eggs, and chickens, with occasionally fresh meat from Barrie, and perhaps as good a bed as can be had in Canada. We started from Barrie at half-past two, and arrived at half-past five.

Whiskey, be it known, with very atrocious brandy, is the only beverage, excepting water, along the country roads of Canada.

From Bruce's we drove to Dawson's, also kept by the widow of an old soldier, where every thing is equally clean, respectable, and comfortable. It is seven miles distant.

Beyond this is Nicoll's, near a corduroy swamp road; and three miles further (which place eschew), seven years ago, I heard the landlady's voice chiding a little girl, who had been sent a quarter of a mile for a jug of water. I heard the same voice again in action, and for the same cause, and a very

dirty urchin again brought some very dirty water. In fact, whiskey was too plentiful and water too scarce.

From Nicoll's to Jeff's Corner is ten long and weary miles, five or six of which are through the forest. Jeff's is not a tavern, so that you must go to bait the horses to Des Hommes, about two miles further, where there is no inducement to stay, it being kept by an old French Canadian, who has a large family of half-breeds. Therefore, on to the village of Penetanguishene, which is twenty miles from Bruce's, or some say twenty-four. We started from Bruce's at half-past three in the morning, and reached "The Village," as it is always called, at half-past twelve, on the 30th of June, and the rain still continuing ever since we left Toronto. Thus, with great expedition, it took the best portion of three days for a transit of only 108 miles. This has been done in twenty-four hours by another route, as I shall explain on my return.

Penetanguishene is a small village which has not progressed in the same ratio as the

military road to it has done. It is peopled by French Canadians, Indians, and half-breeds, and is very prettily situated at the bottom of the harbour. Lieutenant-Colonel Phillpotts, of the Royal Engineers, selected this site after the peace of 1815, when Drummond's Island on Lake Huron was resigned to the Americans, for an asylum for such of the Canadian French settled there as would not transfer their allegiance. They migrated in a body.

This is the nearest point of Western Canada at which the traveller from Europe can observe the unmixed Indian, the real wild man of the woods, with medals hanging in his ears, as large as the bottom of a silver saucepan, rings in his nose, the single tuft of hair on the scalp, eagle's plumes, a row of human scalps about his neck, and the other amiable etceteras of a painted and greased *sauvage*.

Here also you first see the half-breed, the offspring of the white and red, who has all the bad qualities of both with very few of the good of either, except in rare instances.

CHAPTER IV.

The French Canadian.

At Penetanguishene you see the original pioneer of the West, that unmistakeable French Canadian, a goodnatured, indolent man, who is never active but in his canoe singing, or *à la chasse*, a true *voyageur*, of which type of human society the marks are wearing out fast, and the imprint will ere long be illegible. It makes me serious, indeed, to contemplate the Canadian of the old dominant race, and I shall enter a little into his history.

Res ardua vetustis novitatem dare ; and never could an author impose upon himself a greater task than that of endeavouring succinctly to trace such a history, in this age of railroads and steam-vessels, or to bring before

the mind's eye events which have long slumbered in oblivion, but which it behoves thinking minds not to lose sight of.

Man is now a locomotive animal, both as regards the faculties of mind and of motion ; unless in the schools, in the cabinet, or in amusing fictions founded on fact, he rarely finds leisure to think about a forgotten people.

Canada and Canadian affairs have, however, succeeded in interesting the public of America and the public of Europe — the “go-ahead” English reader in the New World — because Canada would be a very desirable addition to the already overgrown Republic founded by the Pilgrim Fathers and Europeans ; because French interest looks with a somewhat wistful eye to the race which at one time peopled and governed so large a portion of the Columbian continent. Regrets, mingling with desires, are powerful stimulants. An unconquerable and natural jealousy exists in France that England should have succeeded in laying the founda-

tions of an empire, which bids fair to perpetuate the glories of the Anglo-Saxon race in its Transatlantic dominion; whilst the true Briton, on the other hand, regards Canada as the apple of his eye, and sees with pleasure and with pride that his beloved country, forewarned by the grand error committed at Boston, and so prophetically denounced by Chatham, has obtained a fairer and more fertile field for British legitimate ambition.

Tocqueville, a sensible and somewhat impartial writer, is the only political foreign reasoner who has done justice to Canada; but it is *par parenthèse* only; and even his powers of mind and of reasoning, nurtured as they have been in republicanism, fail to convince fearless hearts that democracy is a human necessity.

That the American nation will endeavour to put a wet blanket over the nascent fires of Spanish ambition in the miserable new States of the Northern Continent, and to absorb them in the stars of Columbia, there can be

no doubt. California, the most distant of the old American settlements of Spain, has felt already the bald eagle's claw ; Texas is annexed ; and unless European interests prevent it, which they must do, Mexico, Guatemala, Yucatan, and all the petty priest-ridden republics of the Isthmus, must follow, and that too very soon.

But what do the people of the United States, (for the government is not a particeps, save by force,) pretend to effect by their enormous sovereignty ? The control probably of the Atlantic and Pacific seaboards is the grand object, and, to effect this, Canada and Nova Scotia stand in the way, and Canada and Nova Scotia are therefore marked down as other Stars in the American galaxy.

The Russian empire is cited, as a case in point, for immense extension being no obstacle to central coercion, or government, if the term be more pleasing.

We forget that each individual State of the present Union repudiates centralization, and acts independently. Little Maine wanted to

go to war with mighty England on its own bottom ; and there was a rebellion in Lesser Rhode Island, which puzzled all the diplomats very considerably. Now let us sketch a military picture, and bring out the lights and shades boldly.

Suppose that the United States determines upon a war with Great Britain, let us look to the consequences. Firstly, an immense reaction has taken place in Canada, and a mass of growlers, who two years ago would perhaps have been neutral, would readily take arms now in favour of British institutions, simply because "impartiality" has been evinced in governing them.

Next, the French Canadians have no idea of surrendering their homes, their laws, their language, their altars, to the restless and destructive people whose motto is "Liberty !" but whose mind is "Submission," without reservation of creed or colour.

Then, on the boundless West, innumerable Indians, disgusted by the uncereemonious manner in which the Big Knife has driven

them out, are ready, at the call of another Tecumseh, to hoist the red-cross flag.

In the South, the negro, already taught very carefully by the North a lesson of emancipation, only waits the hour to commence a servile and horrible war, worse than that exercised by the poor Cherokees and Creeks in Florida, which, miserable as were the numbers, scanty the resources, and indomitable the courage, defied the united means and skill of the American armies to quell.

A person who ponders on these matters deplores the infatuation of the mob, or of the western backwoodsmen, who advocate war to the knife with England; for, should it unhappily occur and continue, war to the knife it must be.

American orators have asserted that England, base as she is, dare not, in this enlightened age, let loose the blacks. I fear that, self-defence being the first law of Nature, rather than lose Canada, and rather than not gain it, both England and the United States will have recourse to every expedient

likely to bring the matter to an issue, and will abide by that Machiavelian axiom—the end sanctifies the means.

An abominable outcry was raised during the last war against the employment of the savage Indians with our armies; but the loudest in this vituperation forgot that the Americans did the same, as far as their scanty control over the Red Man permitted, and that, where it failed, the barbarous backwoodsman completed the tragedy.

Making razor-strops of Tecumseh's skin was not a very Christian employment, in retaliation for a scalp found wrapped up in paper in the writing-desk of a clerk, when the public offices were sacked at Little York. The poor man most likely thought it a very great curiosity; and I dare say there are some in the British Museum, as well as preserved heads of the South Sea islanders.

A war between England and the United States is a calamity affecting the whole world, and, excepting for political interest, or that devouring fire burning in the breasts of so

many for change, I am persuaded that the intelligence of the Union is opposed to it. America cannot sweep England from the seas, or blot out its escutcheon from The Temple of Fame. It is child's play even to dream of it. England is as vitally essential to the prosperity of America as America is to the prosperity of England ; and, although American feelings are gaining ground in England, by which I do not mean that the President of the United States will ever govern our island, but independent notions and axioms similar to those practised in the Union ; yet the time has not, nor ever will, arrive, that Britain will succumb to the United States, either from policy or fear, any more than that her grandchildren, on this side of the Atlantic, could pull down the Stars and Stripes, and run the meteor flag up to the mast-head again.

The United States is a wonderful confederation, and Nature seems, in creating that people, to have given them constitutions resembling the summers of the northern portion

of the New World, where she makes things grow ten times as fast as elsewhere. A grain of wheat takes a decent time to ripen in England, and requires the sweat of the brow and the labour of the hands to bring it to perfection; but in North America it becomes flour and food almost before it is in ear in the old country. Nature marches quick in America, but is soon exhausted; so her people there think and act ten times as fast as elsewhere, and die before they are aged. The women are old at thirty, and boys of fifteen are men; and so they ripe and ripe, and so they rot and rot.

Everything in the States goes at a railroad pace; every carter or teamster is a Solon, in his own idea; and every citizen is a king *de facto*, for he rules the powers that be. They think in America too fast for genius to expand to purpose; and as their digestion is impaired by a Napoleonic style of eating, so very powerful and very highly cultivated minds are comparatively rare in the Union. There is no time for study, and they take a democratic road to learning.

And yet, *ceteris paribus*, the Union produces great men and great minds; and if any thing but dollars was paid attention to, the literature of America would soon be upon a par with that of the Old World; as it is, it pays better to reprint French and English authors than to tax the brains of the natives.

For this reason, the agricultural population of the States are more reasonable, more amiable, and more original than those engaged in incessant trade. I have seen an American farmer in my travels this year, who was the perfect image of the English franklin, before his daughters wore parasols and thrummed the piano. Oh, railways, ye have much to answer for! for, although the prosperity of the mass may be increased by you, the happiness and contentment of the million is deteriorating every day.

I am not about to write a history of Canada at present, for that is already done, as far as its military annals are concerned, during the three years since I last addressed the public; but it shall yet slumber awhile in its box of pine wood, until the time is ripe

for development : I merely intend here to put together some reminiscences which strike me as to the part the French Canadian has played, and to show that we should neither forget nor neglect him.

Canada, as it is well known, was French, both by claim of discovery and by the more powerful right of possession.

Stimulated by the fame of Cabot, and ambitious to be pilots of the *Meta Incognita*, that visionary channel which was to conduct European valour to the golden Cathay and to the rich Spice Islands of the East, French adventurers eagerly sought the coveted honours which such a voyage could not fail to yield them, and to combine overflowing wealth with chivalric renown. France, England, Spain, Portugal, and Italy, sent forth those daring spirits whose hopes were uniformly crushed, either by encountering the unbroken line of continental coast, or dashed to pieces amidst the terrors of that truly Cimmerian region, where ice and fog, cold and darkness, contend for empire.

Of all those heroic navigators, who would have rivalled Columbus under happier circumstances, none were successful, even in a limited sense, in attempting to reach China by the northern Atlantic, excepting the French alone, who may fairly be allowed the merit of having traversed nearly one half of the broadest portion of the New World in the discovery of the St. Lawrence and its connecting streams, and in having afterwards reached Mexico by the Mississippi.

Even in our own days, nearly four centuries after the Columbian era, the idea of reaching China by the North Pole has not been abandoned, and is actively pursuing by the most enlightened naval government in the world, and, very possibly, will be achieved ; and, as coal exists on the northern frozen coasts, we shall have ports established, where the British ensign will fly, in the realms of eternal frost — nay, more, we shall yet place an iron belt from the Atlantic to the Pacific, a railroad from Halifax to Nootka Sound, and thus reach China in a pleasure voyage.

I recollect that, about twelve years ago, a person of very strong mind, who edited the "Patriot," a newspaper published at Toronto, Mr. Thomas Dalton, was looked upon as a mere enthusiast, because one of his favourite ideas, frequently expressed, was, that much time would not elapse before the teas and silks of China would be transported direct from the shores of the Pacific to Toronto, by canal, by river, by railroad, and by steam.

Twelve years have scarcely passed since he first broached such an apparently preposterous notion, as people of limited views universally esteemed it; and yet he nearly lived to see an uninterrupted steamboat communication from England to Lake Superior—a consummation which those who laughed at him then never even dreamt of—and now a railroad all the way to the Pacific is in progress of discussion.

Mac Taggart, a lively Scotch civil engineer, who wrote, in 1829, an amusing work, entitled "Three Years in Canada," was even

more sanguine on this subject ; and, as he was a clerk of works on the Rideau Canal, naturally turned his attention to the practicability of opening a road by water, by the lakes and rivers, to Nootka Sound.

Two thousand miles of water road by the Ottawa, the St. Lawrence, and the Welland, has been opened in 1845, and a future generation will see the white and bearded stranger toiling over the rocky barriers that alone remain to repel his advances between the great Superior and the Pacific. A New Simplon and a peaceful Napoleonic mind will accomplish this.

The China trade will receive an impulse ; and, as the arms of England have overcome those of the Celestial Empire, and we are colonizing the outer Barbarian, so shall we colonize the shores of the Pacific, south of Russian America, in order to retain the supremacy of British influence both in India and in China. The vast and splendid forests north of the Columbia River will, ere long, furnish

the dockyards of the Pacific coast with the inexhaustible means of extending our commercial and our military marine.

And who were the pioneers? who cleared the way for this enterprise? Frenchmen! The hardy, the enduring, the chivalrous Gaul, penetrated from the Atlantic, in frail vessels, as far as these frail barks could carry him; and where their service ceased, with ready courage adopted the still more fragile transport afforded by the canoe of the Indian, in which, singing merrily, he traversed the greater part of the northern continent, and actually discovered all that we now know, and much more, since lapsed into oblivion.

But his genius was that of conquest, and not of permanent colonization; and, trammelled by feudal laws and observances, although he extended the national domain and the glory of France beyond his most ardent desire, yet he took no steps to insure its duration, and thus left the Saxon and the Anglo-Norman to consolidate the structure of which he had merely laid the extensive foundation.

But, even now, amidst all the enlightenment of the Christian nations, the descendants of the French in Canada shake off the dust of feudality with painful difficulty; and, instead of quietly yielding to a better order of things, prefer to dwell, from sire to son, the willing slaves of customs derived from the obsolete decrees of a despotic monarchy.

Whether they individually are gainers or losers by thus adhering to the rules which guided their ancestors, is another question, too difficult for discussion to grapple with here. As far as worldly happiness and simple contentment are concerned, I believe they would lose by the change, which, however, must take place. The restless and enterprising American is too close a neighbour to let them slumber long in contented ignorance.

The Frenchman was, however, adapted, by his nature, to win his way, either by friendship or by force, among the warlike and untutored sons of the forest. Accommodating himself with ease to the nomadic life of the tribes; contrasting his gay and lively tem-

perament with the solemn taciturnity and immoveable phlegm of the savage ; dazzling him with the splendour of his religious ceremonies ; abstemious in his diet, and coinciding in his recklessness of life ; equally a warrior and equally a hunter ; unmoved by the dangers of canoe navigation, for which he seemed as well adapted as the Red Man himself ; the enterprising Gaul was everywhere feared and everywhere welcome.

The Briton, on the contrary, cold as the Indian, but not so cunning ; accustomed to comparative luxury and ease ; despising the child of the woods as an inferior caste ; accompanied in his wars or wanderings by no outward and visible sign of the religion he would fain implant ; unaccustomed to yield even to his equals in opinion ; unprepared for alternate seasons of severe fasting or riotous plenty ; and wholly without that sanguine temper which causes mirth and song to break forth spontaneously amidst the most painful toil and privations ; was not the best of pioneers in the wilderness, and was, therefore,

not received with open arms by the American aboriginal nations, until experience had taught the sterling value of his character, or, rather, until it became thoroughly apparent.

To this day, where, in the interminable wilderness, all trace of French influence is buried, the Indian reveres the recollections of his forefathers respecting that gallant race; and, wherever the canoe now penetrates, the solemn and silent shades of the vast West, the Bois Brulé, or mixed offspring of the Indian and the Frenchman, may be heard awakening the slumber of ages with carols derived from the olden France, as he paddles swiftly and merrily along.

Such was the Frenchman, such the French Canadian; let us therefore give due honour to their descendants, and let not any feeling of distrust or dislike enter our minds against a race of men, who, from my long acquaintance with them, are, I am fully persuaded, the most innocent, the most contented, and the most happy yeomanry and peasantry of the whole civilized world.

I have observed already, in a former work, that, as far as my experience of travelling in the wilds of Canada goes, and it is rather extensive, I should always in future journeys prefer to provide myself with the true French Canadian boatmen, or voyageurs, or, in default of them, with Indians. With either I should feel perfectly at ease; and, having crossed the mountain waves of Huron in a Canada trading birch canoe with both, should have the less hesitation in trusting myself in the trackless forest, under their sole guidance and protection.

Honneur à Jean Baptiste !
C'est un si bon enfant !

CHAPTER V.

Penetanguishene—The Nipissang Cannibals, and a Friendly Brother in the Wilderness.

Penetanguishene, pronounced by the Indians Pen-et-awn-gu-shene, “the Bay of the White Rolling Sand,” is a magnificent harbour, about three miles in length, narrow and land-locked completely by hills on each side. Here is always a steam-vessel of war, of a small class, with others in ordinary, stores and appliances, a small military force, hospital and commissariat, an Indian interpreter, and a surgeon.

But the presents are no longer given out here, as in 1837 and previously, to the wild tribes; so that, to see the Indian in perfection, you must take the annual government trader, and sail to the Grand Manitoulin Island, about a hundred miles on the northern

shore of Lake Huron, where, at Manitou-awanning, there is a large settlement of Indian people, removed thither by the government to keep them from being plundered of their presents by the Whites, who were in the habit of giving whiskey and tobacco for their blankets, rifles, clothing, axes, knives, and other useful articles, with which, by treaty, they are annually supplied.

The Great Manitoulin, or Island of the Great Spirit, is an immense island, and, being good land, it is hoped that the benevolent intentions of the government will be successful. An Indian agent, or superintendent, resides with them; and a steamboat, called the Goderich, has made one or two trips to it, and up to the head of Lake Huron, last summer.

I went to Penetanguishene with the intention of meeting this vessel and going with her, but fear that her enterprise will be a failure. She was chartered to run from Sturgeon Bay, about nineteen miles beyond the narrows of Lake Simcoe, in connection

with the mail or stage from Toronto, and the Beaver steamboat, plying on Lake Simcoe.

From Sturgeon Bay she went to Penetanguishene, and then to St. Vincent Settlement, and Owen's Sound, on Lake Huron, where a vast body of emigrants are locating. From Owen's Sound, she coasted and doubled Cabot's Head, and then ran down three hundred miles of the shore of Lake Huron to Goderich, Sarnia, Fort Gratiot, Windsor, and Detroit, with an occasional pleasure-trip to Manitoulin, St. Joseph's, and St. Mary's; so that all the north shore of Lake Huron could be seen, and the passengers might take a peep at Lake Superior, by going up the rapids of St. Mary to Gros Cap. But a variety of obstacles occurred in this immense voyage, although ultimately they will no doubt be overcome.

By starting in the Toronto stage early in the morning, the traveller slept on board the Goderich at Sturgeon Bay, a good road having been formed from the Narrows, although, by some strange oversight, this road

terminates in a marsh six hundred feet from the bank to the island, on which the wharf and storehouse built for the steamer are erected. This caused much inconvenience to the passengers.

The stage went, or goes, once a week, on Monday, to Holland Landing, thirty six miles, meets the Beaver, which then crosses Lake Simcoe to the Narrows, a small village, thriving very fast since it is no longer a government Indian station, fifty miles, and there lands the travellers, who proceed by stage to Sturgeon Bay, nineteen more, and sleep on board the Goderich, arriving about eight p.m. The vessel gets under weigh, and reaches Penetanguishene by six in the morning: thus the whole route from Toronto, which takes three days by the land road, is performed in twenty-four hours.

But there are drawbacks: the Georgian Bay, between Sturgeon Bay and Penetanguishene, is, as I have already observed, dangerous at night, or in a fog. At Owen's Sound, the population is not far enough

advanced to build the extensive wharf requisite, or to lay in sufficient supplies of fuel, and thus great detention was experienced there. At Penetanguishene, the wharf is not taken far enough into deep water for the vessel to lie at, and thus she usually grounded in the mud, and detention again arose. Then again, after rounding Cabot's Head and getting into the open lake, the coast is very dangerous, having not one harbour, until we arrive at the artificial one of Goderich, which is a pier-harbour; for the Saugeen is a roadstead full of rocks, and cannot be approached by a large vessel.

If, therefore, any thing happens to the machinery, and a steamer has to trust to her sails, the westerly winds which prevail on Lake Huron and blow tremendously, raising a sea that must be seen to be conceived of in a fresh-water lake, she has only to keep off the shore out into the main lake, and avoid Goderich altogether, by making for the St. Clair River.

However, the vessel did perform the voyage

successfully seven times ; and in summer it may do, and, if it does do, will be of incalculable benefit to the Huron tract, and the new settlements of the far west of Canada.

I am, however, afraid that the railroad schemes for opening the country to the south of this tract will for some time prevent a profitable steamboat speculation, although vast quantities of very superior fish are caught and cured now on the shores of Huron, such as salmon-trout and white fish, which, when properly salted or dried, are equal to any salt sea-fish whatever.

The Canadian French, the half-breeds, and the Indians, are chiefly engaged in this trade, which promises to become one of great importance to the country, and is already much encroached upon by adventurers from the United States.

The herring, as far as I can learn, ascends the St. Lawrence no higher than the Niagara River, but Ontario abounds with them and with salmon ; a smaller species of white fish also has of late years spread itself over that

lake, and is now sold plentifully in the Kingston market, where it was never seen only seven years ago. It is a beautiful fish, firm and well tasted, but rather too fat.

A farmer on the Penetanguishene road has introduced English breeds of cattle and sheep of the best kind. He was, and perhaps still is, contractor for the troops, and his stock is well worth seeing; he lives a few miles from Barrie. Thus the garrison is constantly supplied with finer meat than any other station in Canada, although more out of the world and in the wilderness than any other; and, as fish is plentiful, the soldiers and sailors of Queen Victoria in the Bay of the White Rolling Sand live well.

I was agreeably surprised to find at this remote post that only one soldier drank anything stronger than beer or water; and of course very little of the former, owing to the expense of transport, was to be had. The soldier that did drink spirits did not drink to excess.

How did all this happen in a place where drunkenness had been proverbial? The soldiers, who were of the 82nd regiment, had been selected for the station as married men. Their young commanding officer patronized gardening, cricketing, boating, and every manly amusement, but permitted no gambling. He formed a school for the soldiers and their families, and, in short, he knew how to manage them, and to keep their minds engaged; for they worked and played, read and reasoned; and so whiskey, which is as cheap as dirt there, was not a temptation which they could not resist. In winter, he had sleighing, snowshoeing, and every exercise compatible with the severe weather and the very deep snow incident to the station.

I feel persuaded that, now government has provided such handsome garrison libraries of choice and well selected books for the soldiers, if a ball alley, or racket court, and a cricket ground were attached to every large barrack, there would not only be less drinking in the army, but that vice would ulti-

mately be scorned, as it has been within the last twenty years by the officers. A hard-drinking officer will scarcely be tolerated in a regiment now, simply because excessive drinking is a low, mean vice, being the indulgence of self for unworthy motives, and beneath the character of a gentleman. To be brought to a court-martial for drunkenness is now as disgraceful and injurious to the reputation of an officer as it was to be tried for cowardice, and therefore seldom occurs in the British army.

The vice of Canada is, however, drink ; and Temperance Societies will not mend it. Their good is very equivocal, unless combined with religion, as there is only one Father Matthew in the world, nor is it probable that there will be another.

Penetanguishene is at present the *ultima Thule* of the British military posts in North America. It borders on the great wilderness of the North, and on that backbone of primary rocks running from the Alleghanies, across the thousand islands of the St. Lawrence, to the

unknown interior of the northern verge of Lake Superior.

Penetanguishene will not, however, be long the *ultima Thule* of British military posts in Western Canada, as a large and most important settlement is making at Owen's Sound, on Lake Huron, connected by a long road through the wilderness with Saugeen river, another settlement on the shores of that lake, to prevent the necessity of the difficult water-passage round Cabot's Head; and a steam-boat has been put on the route by the Canada Company, to connect Saugeen with Goderich.

The government, up to the 31st of December, 1845, had sold or granted 54,056 acres of land at Owen's Sound, of which 1,168 acres had been chopped or cleared of the forest last year alone; and 1,787 acres of wheat and 1,414 acres of oats had been harvested in 1845. There were 483 oxen, 596 cows, 433 young cattle, and 26 horses; and the population was 1,950, of which 759 were males above sixteen, and 399 males under sixteen,

with 395 females above, and 399 under, the same age.

In this new colony there were 1,005 Presbyterians, 195 Roman Catholics, 173 Methodists, 167 of the Church of England, 67 Baptists, 8 Quakers. The other sects or divisions were not enumerated with sufficient accuracy to detail; and Owen's Sound, being as yet buried in the Bush, cannot be visited by casual travellers, unless when an occasional steamer plies from Penetanguishene. There is yet no post-office; but 1,500 newspapers and letters were received or sent in 1845; and two flour-mills and two saw-mills are erected and in use. Three schooners of a small class ply in summer to Penetanguishene. The village is at the head of Owen's Sound, fifteen miles from Cape Croker, and is named Sydenham, containing already thirty-six houses. Government gives 50 acres free, on condition of actual settlement, and that one third is cleared and cropped in four years, when a deed is obtained: another fifty is granted by paying 8s. an acre within three years, 9s. within six

years, 10s. an acre within nine years. The soil is good and climate healthy.

North-north-west and north-east of Penetanguishene, all is wood, rock, lake, river, and desert, in which, towards the French river, the Nipissang Indian, the most degraded and helpless of the Red Men, wanders, and obtains scanty food, for game is rare, although fish is more plentiful.

An exploring expedition into this country was sent by Sir John Colborne, in 1835, with a view of ascertaining its capabilities for settlement. An officer of engineers, Captain Baddely, was the astronomer and geologist; a naval officer the pilot; with surveyors and a hardy suite.

They left Lake Simcoe in the township of Rama from the Severn river, and, going a short journey eastward, struck the division line of the Home and the Newcastle districts, which commences between the townships of Whitby and Darlington, on the shore of Lake Ontario, and runs a little to the westward of north in a straight course, until it strikes the

south-east borders of Lake Nipissang, embracing more than two degrees of latitude, not one half of which has ever been fully explored.

The plan adopted was to cut out this line, and diverge occasionally from it to the right and left, until a great extent of unknown land on the east, and the distance between it and Lake Huron, which contained a large portion of the Chippewa Indian hunting-grounds, was thoroughly surveyed.

In performing so very arduous a task, much privation and many obstacles occurred—forests, swamps, rivers, lakes, rocky ridges—all had to be passed.

To the eastward of the main line, and for some distance to the westward, good land appeared ; and, as the agricultural probe was freely used, chance was not permitted to sway. The agricultural probe is an instrument which I first saw slung over my friend Bad-dely's shoulders, and of his invention. It is a sort of huge screw gimblet, or auger, which readily penetrates the ground by being worked

with a long cross-handle, and brings up the subsoil in a groove to a considerable depth. Specimens of the soil and of rocks and minerals were collected, and a plan was adopted which is a useful lesson to future explorers. A small piece of linen or cotton, about four inches square, had two pieces of twine sewed on opposite corners, and the cloth was marked in printers' ink, from stamps, with figures from 1 to 500. A knapsack was provided, and the specimens were reduced to a size small enough to be carefully tied up in one of these numbered square cloths; and, as the specimens were collected, they were entered in the journal as to number and locality, strata, dip, and appearance. Thus a vast number of small specimens could be brought on a man's back, and examined at leisure.

The toils, however, of such a journey in the vast and untrodden wilderness are very severe, and the privations greater. For, in this tract, on the side next to Lake Huron, there was an absence of game which scarcely ever occurs in the forest near the great lakes. With

ice forming and snow commencing, and with every prospect of being frozen in, a portion of the explorers missed their supplies, and subsisted for three whole days and nights on almost nothing; a putrid deer's liver, hanging on a bush near a recent Indian trail, was all the animal food they had found; but this even hunger could scarcely tempt them to cook. I was exploring in a more civilized country near them; but even there our Indian guide was at fault, and, from want of proper precaution, our provision failed. A small fish amongst four or five persons was one day's luxury.

The Nipissang Indians, a very degraded and wretched tribe, live in this desolate region, and, it is said, have sometimes been so reduced for want of game as to resort to cannibalism. We heard that they had recently been obliged to resort to this practice. I was directed, with my friends, to conciliate these people, and to assure them that the British government, so far from intending to injure them by

an examination of their country, desired only to ameliorate their sad condition.¹

We had a council. The astronomer royal, who was also the geologist, was a fine, portly fellow, whose bodily proportions would make three such carcasses as that which I rejoice in. The nation sat in council and the Talk was held. Grim old savages, filthy and forbidding, half-starved warriors, hideous to the eye, sat in large circle, with the two great Red Fathers, as they called my friend and myself, on account of our scarlet jackets. The pipe passed from hand to hand and from mouth to mouth, and many a solemn whiff ascended in curling clouds : all was solemn and sad.

¹ Some time afterwards, during the period in which Lord Glenelg held the Colonial Office, I was appointed to report upon the state and condition of the Indians of Canada, by his lordship, without my knowledge or solicitation ; this was never communicated to me by the then Lieut.-Governor of Upper Canada, and I only knew of it last year, by accidentally reading a report on the subject made by order of the House of Assembly, after I left Canada. I do not know if his lordship will ever read this work, or the gentleman to whom I believe I was indebted for the intended kindness ; and, if either should, I beg to tender my thanks thus publicly.

The speech was made and answered with an acuteness which we were not prepared for. But our explanation and mission were at length received, and the pledge of peace, the wampum-belts, were accepted and worn by the aged chiefs. My friend jogged my elbow once or twice, and thought they were eyeing him suspiciously, for he was to proceed into their country. He looked so fat and so healthy, that he thought their greasy mouths watered for a roasted slice of so fine a subject!

But the wampum pledge is never broken, and we had smoked the calumet of friendship. Thus, although he luxuriated, after a total abstinence of three days, on the sight of a decayed deer's liver, which he could not be prevailed upon to partake of, yet the Nipissang, starving as he must also have been, never fried my friend, nor feasted on his fatness.

This is not the only good story to be told of Penetanguishene; for the American press of the frontier, with its accustomed adherence

to truth, discovered a mare's nest there lately, and stated that the British government kept enormous supplies of naval stores, several steam-vessels, a depôt of coal, and everything necessary for the equipment of a large war fleet on Lake Huron, at this little outpost of the West, and that a tremendous force of mounted cavaliers were always ready to embark on board of it at all times.

There are now certainly a good many horses at the village, whereas, in 1837, perhaps one might have found out a dozen by great research there: as for cavalry, unless Brother Jonathan can manufacture it as cheaply and as lucratively as he does wooden clocks or nutmegs, it would be somewhat difficult to *raise* it at Penetanguishene.

The village is a small, rambling place, with a little Roman Catholic church and a storehouse or general shop or two, about which, in summer, you always see idle Indians playing at some game or other, or else smoking with as idle villagers.

The garrison is three miles from the village,

and is always called "The Establishment;" and in the forest between the two places is a new church, built of wood, very small, but sufficient for the Established Church, as it is sometimes called, of that portion of Canada. A clergyman is constantly stationed here for the army, navy, and civilians, and near the church is a collection of log huts, which I placed there some years ago by order of Lord Seaton, with small plots of ground attached to each as a refuge for destitute soldiers who had commuted their pensions.

This Chelsea in miniature flourished for a time, and drained the streets of the large towns of Canada of the miserable objects; but, such was the improvidence of most of these settlers and such their broken constitutions, that, on my present visit, I found but one old serjeant left, and he was on the point of moving.

The commutation of pensions was an experiment of the most benevolent intention. It was thought that the married pensioner would purchase stock for a small farm, and set himself down to provide for his children with a

sum of money in hand which he could never have obtained in any other way. Many did so, and are now independent; but the majority, helpless in their habits, and giving way to drink, soon got cheated of their dollars and became beggars; so that the government was actually obliged at length to restore a small portion of the pension to keep them from starvation. They died out, would not work at the Penetanguishene settlement, and have vanished from the things that be. Poor fellows! many a tale have they told me of flood and field, of being sabred by the cuirassiers at Waterloo, of being impaled on a Polish lance, and of their wanderings and sufferings.

The military settlement, however, of the Penetanguishene road is a different affair. It was effected by pensioned non-commissioned officers and soldiers, who had grants of a hundred acres and sometimes more; and it will please the benevolent founder, should these pages meet his eye, to know that many of them are now prosperous, and almost all well to do in the world.

But we must retrace our steps, and waggon back again by their doors to Barrie.

I left the village at half-past six in the morning, raining still, with the wind in the south-east, and very cold. We arrived at the Widow Marlow's, nineteen miles, at mid-day; the weather having changed to fine and blowing hard—certainly not pleasant in the forest-road, on account of the danger of falling trees, to which this pass is so liable that a party of axemen have sometimes to go ahead to cut out a way for the horses.

We passed through the twelve mile woods by a new road, which reduces the extent of actual forest to five, and avoids altogether the Trees of the Two Brothers, noted in Penetanguishene history for the fatal accident, narrated in a former volume, by which one soldier died, and his brother was, it is supposed, frightened to death, in the solemn depths of the primeval and then endless woods.

Near the end of the five mile Bush, about a mile from the first clearance, Jeffrey, the

landlord of the inn at the village, has built a small cottage for the refreshment of the traveller, and in it he intends to place his son. In the mean time, until quite completed, for money is scarce and things not to be done at railroad pace so near the North Pole, he has located here an old well known black gentleman, called Mr. Davenport, who was once better to do in the world, and kept a tavern himself.

Having had the honour of his acquaintance for many years, I stopped to see how my old friend was getting on, particularly as I heard that he was now very old, and that his white consort had left him alone in the narrow world of the house in the woods. He received me with grinning delight, and told me that he had just left the new jail at Barrie for selling liquor without a license, which, I opine, is rather hard law against a poor old nigger, who had literally no other means of support, and was most usefully stationed, like the monks of St. Bernard, in a dangerous pass.

But the wind is tempered to the shorn lamb, and the woolly head of old Davenport had matter of satisfaction in it from a source that he never dreamed of.

Alone — far away from the whole human world, in the depth of a hideous forest, with a road nearly impassable one half of the year, —he found an unexpected friend.

For fear of the visits of two-footed and four-footed brutes during the long nights of his Robinson Crusoe solitude, old Davenport always shut up his log castle early, and retired to rest as soon as daylight departed; for it did so very early in the evening there, as the solemn pines, with their gray trunks and far-spreading moss-grown arms and dismal evergreen foliage, if it can be called foliage, stood close to his dwelling — nay, brushed with the breath of the wind his very roof.

Recollect, reader, that this lonely dweller in the Bush resided near the spot where the two soldier brothers perished; and you may imagine his thoughts, after his castle was

closed at night by the lone warder. No one could come to his assistance, if he had the bugle that roused the echoes of Fontarabia.

He had retired to rest early one night in the young spring-time, when he heard a singular noise on the outside of his house, like somebody moaning, and rubbing forcibly under his window, which was close to the head of his pallet-bed. Quivering with fear, he lay, with these sounds continuing at short intervals, through the whole night, and did not rise until the sun was well up. He then peeped cautiously about, but neither heard nor saw any thing; and, axe in hand and gun loaded, he went forth, but could not perceive aught more than that the ground had been slightly disturbed. This went on for some time, until at last, one fine moonlight night, the old man ventured to open a part of his narrow window; and there he saw rubbing himself, very composedly, a fine large he bear, who looked up very affectionately at him, and whined in a decent melancholy growl.

Davenport had, it seems, thrown some useless article of food out of this window; and Bruin supposed, no doubt, that Blackey did it out of compassionate feeling for a fellow denizen of the forest, and repeated his visits to obtain something more substantial, rubbing himself, to get rid of the mosquitoes, as it was his custom of an afternoon, against the rough logs of the dwelling. He had, moreover, become a little impatient at not being noticed, and scratched like a dog to make the lord of the mansion aware of his presence. This usually occurred about nine o'clock.

Davenport, at last, threw some salt pork to Bruin, which was most gratefully received; and every night after that, for the whole summer and autumn, at nine o'clock or thereabouts, the bear came to receive bread, meat, milk, or potatoes, or whatever could be spared from the larder, which was left on the ground under the window for him. In fact, they soon came to be upon very friendly terms, and spent many hours in each other's com-

pany, with a stout log-wall between Davenport and his brother, as he always calls the bear.

When the snows of winter, the long, severe winter of these northern woods, at last came, Bruin ceased his nocturnal visitations, and has never been seen since, the old man thinking that he has been shot or trapped by the Indian hunters.

I asked Davenport if he ever ventured out to look for his brother, but he shook his head and replied, "My brudder might have hugged me too hard, perhaps." The poor old fellow is very cheerful, and regrets his brother's absence daily. The bailiffs most likely would not have put him in jail for selling whiskey to a tired traveller, but would have avoided the castle in the woods, if they thought there was any chance of meeting Bruin.

CHAPTER VI.

Barrie and Big Trees—A new Capital of a new District—Nature's Canal—The Devil's Elbow—Macadamization and Mud—Richmond Hill without the Lass—The Rebellion and the Radicals—Blue Hill and Bricks.

We reached Barrie safely that night, and slept at the Queen's Arms. Next morning, I had an excellent opportunity of seeing this thriving village.

It is very well situated on the shore of Kempenfeldt Bay, on ground rising gradually to a considerable height, and is neatly laid out, containing already about five hundred people.

On the high ground overlooking the place are a church, a court-house, and a jail, all standing at a small distance from each other, nearly on a line, and adding very much indeed to the appearance of the place. The

deep woods now form a background, but are gradually disappearing. I went about a mile into them, and saw several new clearances, with some nice houses building or built; and particularly one by Bingham, our landlord, a very comfortable, English-looking, large cottage, with outhouses and an immense barn, round which the rascally ground squirrels were playing at hide-and-seek very fearlessly.

The Court House contains the district school, which appears very respectable, and is conducted by a young Irishman; it also contains all the district offices, and is two stories high, massively and well built, the lower story being of stone and the upper of brick, both from materials on the spot.

The church is of wood, plain and neat. The jail is worth a visit, and shows what may be done in the forest and in a bran-new district, as the district of Simcoe is, although I believe about half the money it cost would have been better employed on the roads; for it has never been used, except as a place of confinement for an unfortunate lunatic.

It is formed in the castellated style, of a handsome octagonal tower, of very white, shelly limestone, with a square turreted stone enclosure, on the top of which is an iron *chevaux de frize*, and which enclosure is subdivided into separate day-yards for prisoners. The entrance is under a Gothic archway; and in the centre of the tower is an internal space, open from top to bottom, and preventing all access to the stairs from the cells, which are very neat, clean, and commodious, with a good supply of water, and excellent ventilation. It is, in short, as pretty a toy penitentiary as you could see anywhere, and looks more like an Isle of Wight gentleman's fortress, copied after the most approved Wyattville pattern of baronial mansion, with a little touch of the card-house. In short, it is as fine as you can conceive, and sets off the village wonderfully well.

The red pine, near Barrie and through all the Penetanguishene country, grows to an enormous size. I measured one near Barrie no less than twenty-six feet, in

girth, and this was merely a chance one by the path-side. Its height, I think, must have been at least two hundred feet, and it was vigorously healthy. What was its age? It would have made a plank eight feet broad, after the bark was stripped off.

But the woods generally disappoint travellers, as they never penetrate them; and the lumberers have cut down all available pines and oaks within reach of the settlements, excepting where they were not worth the expence of transport. The pines, moreover, take no deep root; and, as soon as the underbrush or thicket is cleared, they fall before the storm. Provident settlers, therefore, rarely leave large and lofty trees near their dwellings for fear of accident.

The pine, in the Penetanguishene country, has a strange fancy to start out of the earth in three, five, or more trunks, all joined at the base, and each trunk an enormous tree. I have an idea that this has arisen from the stony, loose soil they grow in, which has caused this strange freak of Nature, by

making it difficult for the young plant to rear its head out of the ground. Whatever is the reason, however, all the masts of some "great Amiral" might be truly provided out of a single pine-tree.

But we must leave Barrie, after just mentioning Kempenfeldt, about a mile or so distant, which was the original village; and, although at the actual terminus of the land road, has never flourished, and still consists of some half dozen houses. The newer Admiral superseded the more ancient one; for Barrie did deeds of renown, which it suited the Canadians to commemorate much more than the unfortunate Kempenfeldt and his melancholy end.

If ever there was an infamous road between two villages so close together, it is the road between these two places; I hope it will be mended, for it is both dark and dangerous.

I always wondered not a little how it happened that Bingham of Barrie kept such a good table, where fresh meat was as plentiful as at Toronto. I looked for the market-place

of the capital of Simcoe : there was none. But the mystery was solved the moment I put my foot on board the Beaver steamer to go back by the water road.

What will the reader think of Leadenhall Market being condensed and floating? Such, however, was the case; there was a regular travelling butcher's-shop, for the supply of the settlers around Lake Simcoe; and meat, clean and enticing as at the finest stall in the market aforesaid, where upon regular hooks were regularly displayed the fine roasting and boiling joints of the season. And a very fair speculation no doubt it is, this pedlar butchery.

On the 3rd of July, at half-past twelve, I left the capital of the Simcoe district, and am particular as to dates and seasons, because it tells the traveller for pleasure what are the times and the tides he should choose.

We embarked on board the good ship Beaver, a large steam-vessel, for the Holland Landing, distant twenty-eight miles—twenty-one of them by the lake, and seven by the river. The vessel stops by the way at several

settlements, where half-pay officers generally have pitched their tents ; and twice a week she makes the grand tour of the whole lake, at an altitude of upwards of seven hundred and fifty feet above Lake Ontario, and not forty miles from it.

This navigation of the Holland river is very well worth seeing, as it is a natural canal flowing through a vast marsh, and very narrow, with most serpentine convolutions, often doubling upon itself.—Conceive the difficulty of steering a large steamboat in such a course ; yet it is done every day in summer and autumn, by means of long poles, slackening the steam, backing, &c., though very rarely without running a little way into the soft mud of the swamp. The motion of the paddles has, however, in the course of years, widened the channel and prevented the growth of flags and weeds.

There is one place called the Devil's Elbow, a common name in Canada for a difficult river pass, where the sluggish water fairly makes a double, and great care is necessary. Here the

enterprising owner and master of the vessel tried to cut a channel; but, after getting a straight course through the mud for two-thirds of the way, he found it too expensive to proceed, but declares that he will persevere. Why does not the Board of Works, which has literally the expenditure of more than a million, take the business in hand, and complete it? One or two hundred pounds would finish the affair. But perhaps it is too trifling, and, like the cut at the Long Point, Lake Erie, to which we shall come presently, is overlooked in the magnitude of greater things.

Of all the unformed, unfinished public establishments in Canada, it has always appeared to me that the Crown Lands department, and the Board of Works, are pre-eminent. One costs more to manage the funds it raises than the funds amount to; and the other was for several years a mere political job. No very eminent civil engineer could have afforded to devote his time and talents to it, as he must have been constantly exposed to be

turned out of office by caprice or cupidity. I do not know how it is now managed, but the political jobbing is, I believe, at an end, as the same person presides over the office who held it when it was in very bad odour. This gentleman must, however, be quite adequate to the office, as some of the public works are magnificent ; but I cannot go so far as to say that one must approve of all. The St. Lawrence Canal has cost the best part of a million, is useless in time of war, and a mere foil at all times to the Rideau navigation, which the British government constructed free of any provincial funds. The timber slides on the Trent are so much money put into the timber-merchants' pockets, to the extreme detriment of the neighbouring settlers, whose lands have been swept of every available stick by the lawless hordes of woodcutters engaged to furnish this work ; and who, living in the forest, were beyond the reach of justice or of reason, destroying more trees than they could carry away, and defying, gun and axe in hand, the peaceable proprietors.

It was intended, before the rebellion broke out, to render the river Trent navigable by a splendid canal, which would have opened the finest lands in Canada for hundreds of miles, and eventually to have connected Lake Huron with Lake Ontario. A large sum of money was expended on it before the Board of Works was constituted, and an experienced clerk of works, fresh from the Rideau Canal, was chosen to superintend; but the troubles commenced, and the money was wanted elsewhere.

When money became again plentiful, and the country so loudly demanded the Trent Canal, why was it not finished? I shall give by and by an account of a recent excursion to the Trent, and then we shall perhaps learn more about it, and why perishing timber slides were substituted for a magnificent canal.

But the Devil's Elbow should be straightened by the Board of Works at all events, otherwise it may stick in the mud, and then nobody can help it; for the marsh is very extensive, and there would be no Jupiter to cry out to.

Well, however, in spite of all obstacles, Captain Laughton piloted us safe to Ague and Fever Landing, where, depend upon it, we did not stay a moment longer than sufficed to jump into a coloured gentleman's waggon, which was in waiting, and in which we were driven off as a coloured gentleman always drives, that is to say, in a hand-gallop, to Winch's tavern, our old accustomed inn at St. Alban's, where we arrived in due time, and there hired another Jehu, who was an American Irishman (a sad compound), to take us as far towards Yonge Street as practicable. We reached Richmond Hill, seventeen miles from the Landing, at about eight o'clock, having made a better day's journey than is usually accomplished on a road which will be macadamized some fine day; for the Board of Works have a Polish engineer hard at work surveying it—of course no Canadian was to be found equal to this intricate piece of engineering—and I saw a variety of sticks stuck up, but what they meant I cannot guess at. I suppose they were going to *grade* it, which is the favourite American term—a

term, by the by, by no manner or method meaning *gradus ad Parnassum*, or even laying it out in steps and stairs, like the Scotch military road near Loch Ness ; but which, as far as my limited information in Webster's Dictionary of the Anglo-Saxon tongue goes, signifies levelling. I may, however, be mistaken ; and this puts me in mind of another tale to beguile the way.

A character set out from England to try his fortune in Canada. He was conversing about prospects in that country, on board the vessel, with a person who knew him, but whom he knew not. "I have not quite made up my mind," said the character, "as to what pursuit I shall follow in Canada ; but that which brings most grist to the mill will answer best ; and I hear a man may turn his hand to anything there, without the folly of an apprenticeship being necessary ; for, if he has only brains, bread will come—now, what do you think would be the best business for my market ?"

"Why," said the gentleman, after ponder-

ing a little, "I should advise you to try civil engineering; for they are getting up a Board of Works there, and want that branch of industry very much, for they won't take natives; nothing but foreigners or strangers will go down."

"What is a civil engineer?" said the character.

"A man always measuring and calculating," responded his adviser, "and that will just suit you."

"So it will," rejoined Character; and a civil engineer he became accordingly, and a very good one into the bargain; for he had brains, and had used a yard measure all his lifetime.

I was told this story by a person of veracity, who heard the conversation, but it is by no means a wonderful one; for such is the versatility of talent which the climate of Northern America engenders, that I knew a leading member of parliament provincial, who was a preacher, a shopkeeper, a doctor, a lawyer, a banker, a militia colonel, and who

undertook to build a suspension bridge across the cataracted river Niagara, to connect the United States with Canada for £8,000, lawful money of the colony; an undertaking which Rennie would perchance have valued at about £100,000; but *n'importe*, the bill was passed, and a banking shop set up instead of a bridge, which answered every purpose, for the notes passed freely on both sides until they were worn out.

Behold us, however, at Richmond Hill, having safely passed the Slough of Despond, which the vaunted Yonge Street mud road presents, between the celebrated hamlet of St. Alban's and the aforesaid hill, one of the greatest curiosities of which road, near St. Alban's, is the vicinity of a sort of Mormon establishment, where a fellow of the name of David Wilson, commonly called David, has set up a Temple of the Davidites, with Virgins of the Sun, dressed in white, and all the tomfooleries of a long beard and exclusive sanctity. But America is a fine country for such knavery. Another curiosity is less

pitiable and more natural. It is Bond Lake, a large narrow sheet of water, on the summit between Lake Simcoe and Lake Ontario, which has no visible outlet or inlet, and is therefore, like David Wilson, mysterious, although common sense soon lays the mystery in both cases bare ; one is a freak of Nature concealing the source and exitus, the other a fraud of man.

The oak ridges, and the stair-like descents of plateau after plateau to Ontario, are also remarkable enough, showing even to the most thoughtless that here ancient shores of ancient seas once bounded the forest, gradually becoming lower and lower as the water subsided. Lyell visited these with the late Mr. Roy, a person little appreciated and less understood by the great ones of the earth at Toronto, who made an excellent geological survey of this part of the province, and whose widow had infinite difficulty in obtaining a paltry recompense for his labours in developing the resources of the country. The honey which this industrious bee manu-

factured was sucked by drones, and no one has done him even a shadow of justice, but Mr. Lyell, who, having no colonial dependence, had no fears in so doing.

But of Richmond Hill, why so called I never could discover, for it is neither very highly picturesque, nor very highly poetical, although Dolby's Tavern is a most comfortable resting-place for a wearied traveller, at which prose writer or poetaster may find a haven. Attention, good fare, and neatness prevail. It is English.

I have observed two things in journeying through Upper Canada. If you find neatness at an hostel, it is kept by old-country people. If you meet with indifference and greasy meats, they are Americans. If you see the best parlour hung round with bad prints of presidents, looking like Mormon preachers, they are radicals of the worst leaven. If prints from the New York Albion, neatly framed and glazed, hang on each side of a wooden clock, over a sideboard in the centre of the room, opposite to the

windows, the said prints representing Queen Victoria, Lord Nelson, Windsor Castle, or the New Houses of Parliament, be assured that loyalty and John Bullism reign there; and, although you meet with no servility, you will not be disgusted with vulgar assumption, such as cocking up dirty legs in dirty boots on a dirty stove, wearing the hat, and not deigning to answer a civil question.

Personally, no man cares less for the mode of reception, when I take mine ease at mine inn, than I do, for old soldiers are not very fastidious, and old travellers still less so; but give me sturdy John Bull, with his blunt plainness and true independence, before the silly insolence of a fellow, who thinks he shows his equality, by lowering the character of a man to that of a brute, in coarse exhibitions of assumed importance, which his vocation of extracting money from his unwilling guests renders only more hateful.

We departed from Richmond Hill at half-past five, and waggoned on to Finch's Inn, seven miles, where we breakfasted. This is

another excellent resting-place, and the country between the two is thickly settled. I forgot to mention that we have now been travelling through scenes celebrated in the rebellion of Mackenzie. About five miles from Holland Landing is the Blacksmith's Shop, which was the head-quarters of Lount, the smith, who, like Jack Cade, set himself up to reform abuses, and suffered the penalty of the outraged laws.

Lount was a misled person, who, imbued with strong republican feelings, and forgetting the favours of the government he lived under, which had made him what he was, took up arms at Mackenzie's instigation, and thought he had a call—a call to be a great general. He passed to his account, so '*requiescas in pace*,' Lount! for many a villain yet lives, to whose vile advices you owed your untimely end, and who ought to have met with your fate instead of you. Lount had the mind of an honest man in some things, for it is well known that his counsels curbed the bloody and incendiary spirit of

Mackenzie in many instances. The government has not sequestered his property, although his sons were equally guilty with himself.

We also pass, in going to Toronto, two other remarkable places. Finch's Tavern, where we breakfasted at seven o'clock, was formerly the Old Stand, as it was so called, of the notorious Montgomery, another general, a tavern general of Mackenzie's, who moved to a place about four miles from the city, where the rebels were attacked in 1837 by Sir Francis Head, and near which the battle of Gallows Hill was fought.

Montgomery was taken prisoner, sent to Kingston, and escaped by connivance, with several others, from the fortress there on a dark night, fell into a ditch, broke his leg, and afterwards was hauled by his comrades over a high wall, and got across the St. Lawrence into the United States, where he was run over afterwards by a waggon and much injured. His tavern was burnt to the ground by the militia during the action, on

account of the barbarous murder there of Colonel Moodie, a very old retired officer, who was killed by Mackenzie's orders in cold blood. It is now rebuilt on a very extensive scale; and he is again there, having been permitted to return, and his property, which was confiscated, has been restored to his creditors.

Such were Mackenzie's intended government and the tools he was to govern by! Such is the British government! The Upper Canadians wisely preferred the latter.

Next to Richmond Hill is Thornhill, all on the macadamized portion of the road to Toronto. Thornhill is a very pretty place, with a neat church and a dell, in which a river must formerly have meandered, but where now a streamlet runs to join Lake Ontario. Here are extensive mills, owned by Mr. Thorne, a wealthy merchant, who exports flour largely, the Yonge Street settlement being a grain country of vast extent, which not only supplies his mills, but the Red Mills, near Holland Landing, and many others.

From Montgomery's Tavern to Toronto is almost a continued series for four miles of gentlemen's seats and cottages, and, being a straight road, you see the great lake for miles before its shores are reached. Large sums have been expended on this road, which is carried through a brick-clay soil, in which the Don has cut deep ravines, so that immense embankments and deep excavations for the level have been requisite.

Near Toronto, at Blue Hill, large brick yards are in operation, and here white brick is now made, of which a handsome specimen of church architecture has been lately erected in the west end of the city. Tiles, elsewhere not seen in Canada, are also manufactured near Blue Hill; but they are not extensively used, the snow and high winds being unfavourable to their adoption, shingles or split wood being cheaper, and tinned iron plates more durable and less liable to accident.

In most parts of Upper Canada, near the shores of the great lakes, you can build a house either of stone or brick, as it suits

your fancy, for both these materials are plentiful, particularly clay ; but at Toronto there is no suitable building-stone ; plenty of clay, however, is found, for there you may build your house out of the very excavations for your cellars ; and I confess that I prefer a brick house in Canada to one of limestone, for the latter material imbibes moisture ; and if a brick house has a good projecting roof, it lasts very long, and is always warm.

It is surprising to observe the effects of the climate on buildings in this country. A good stone house, not ten years old, carefully built, and pointed between the joints of the masonry with the best cement, requires a total repair after that period, and often before. The window-sills and lintels of limestone break and crack, and the chimneys soon become disjointed and unsafe. Although it may seem paradoxical, yet it is true that the woodwork of a house lasts good much longer than the stone, or rather the cement, which joins the stone ; but wood decays also

very rapidly. A bridge becomes rotten in ten years, and a shingled roof lasts only fifteen; but then wood is never seasoned in America; it would not pay.

CHAPTER VII.

Toronto and the Transit — The ice and its innovations—
Siege and storm of a Fortalice by the Ice-king—Newark,
or Niagara—Flags, big and little—Views of American and
of English institutions—Blacklegs and Races—Colonial high
life—Youth very young.

Behold us again in Toronto at Macdonald's
Hotel; and, as we shall have to visit this
rising city frequently, we shall say very little
more about it at present, but embark as
speedily as possible on board the Transit,
and steam over to Niagara.

The Transit, a celebrated packet, now get-
ting old, and commanded by a son of its
well-known owner, Captain Richardson, starts
always in summer at eight a. m. punctually,
and makes her voyage by half-past eleven, at
which hour, on the 5th day of July, we once

more touched the shore of Newark, or Niagara Town, at the Dock Company's wharf, which we found had been greatly damaged in the spring of the year by a most extraordinary ice phenomenon.

At the breaking-up of the frost, the ice in the river Niagara, which came down the river, packed near its mouth, and dammed it up so high at Queenston, seven miles above and close to the narrows, that the upper surface of the fields of ice was thirty feet above the level of the river, there a quarter of a mile broad or more. The consequence was, that every wharf and every building under this level was destroyed and crushed. Every edifice on the banks, and among others a strong stone barrack, full of soldiers, was stormed by the frost-king, during the darkness of an awful night, and the front wall fairly breached and borne down by the advancing masses of ice. The soldiers had barely time to escape from the crashing and rending walls; and their cooking-house, a detached building, some yards from the bar-

rack and higher up the bank, was turned over, as if it had been a small boat.

In the memory of man, such a scene had never occurred before, and probably never will again; and I have been told, by those who beheld it, that a more solemn display of natural power and irresistible might has seldom been witnessed than that of the gradual grinding, heaving passage of one great floe, or field, of thick-ribbed ice over the other, until that summit was gained which could not be exceeded.

Then came the disruption, the roar, the rush, the fury, the foam, the groaning thunder, and the river flood; the plunge and the struggle between the solid and the liquid waters.

Truly, the thundering water was well named by the Indian of old—NE AW GAR AW is very Greek sounding.

Newark, or, as it is now called, Niagara, but, as it should be named, Simcoe, is still a pretty, well laid-out town; and, although it has scarcely had a new house built in it for

many years past, is on the whole a very respectable place, and the capital of the district of Niagara, celebrated for its apple, peach, and cherry orchards.

It has a good-looking church, and the living is a rectory. A Roman Catholic church stands close to the English, and a handsome Scots church is at the other end of the town. There is an ugly jail and Court-House about a mile in the country, and an excellent market, where every thing is cheap and good.

Barracks for the Royal Canadian Rifle regiment stand on a large plain. Old Fort George, the scene of former battling, is in total ruin; and Fort Mississagua, with its square tower, looks frowningly at Fort Niagara, on the American side of the estuary of the Great River. I never see these rival batteries, for it is too magniloquent to style them fortresses, but they picture to my mind England and the United States.

Mississagua looks careless and confident, with a little bit of a flag—the flag, however,

of a thousand years, displayed, only on Sundays and holidays, on a staff which looks something like that which the king-making Warwick tied his heraldic bear to.

The antiquity and warlike renown of England sit equally and visibly impressed on the crest of the miserable Mississagua as on that of Gibraltar.

Fort Niagara, an old French Indian stockade, modernized by the American engineers from time to time, half-lighthouse, half-fortification, glaring with whitewashed walls, that may be seen almost at Toronto, with a flag-staff towering to the skies, and a flag which would cover the deck of a first-rate, displayed from morn to night, speaks of the new nation, whose pretensions must ever be put in plain view, and constantly tell the tale that America is a second edition of the best work of English industry and of British valour—a second edition interwoven, however, with foreign matter, with French *fierté* without French *politesse*, with German mysticism without German learning, with the

restless and rabid democracy of the whole world without the salutary check of venerable laws, and with that strange mixture of freedom and slavery, of tolerance and intolerance, which distinguishes America of the nineteenth century.

But it is, nevertheless, a most extraordinary spectacle, to contemplate the rise and progress of the union in so short a period since the declaration of independence.

An Irish gentleman, apparently a clergyman, last year favoured the public with the result of an extensive tour in Canada and the United States, in "Letters from America."

He starts in his preface with these remarkable expressions, which must be well considered and analyzed, because they are the deliberate convictions of an observant and well-informed man, who had, moreover, singular opportunities of reflecting upon the people he had so long travelled amongst.

He says that "In energy, perseverance, enterprise, sagacity, activity, and varied re-

sources " the Americans infinitely surpass the British; that he never met with "a stupid American." That our "American children" surpass us not only in our good, but "in our evil peculiarities." This I cannot understand; for, surely, if we have *peculiarities*, which there is no denying, they must by all the rules of logic be limited to ourselves.

But the writer observes, in a paragraph too long for quotation, that they exceed us in materialism and in utilitarianism; that we, a nation of shopkeepers, as Napoleon styled the English, were outdone in the worship of Mammon by them; that we have rejected too much the higher branches of art and science, and the cultivation of the æsthetic faculty — what an abominable word æsthetic is! it always puts me in mind of asthmatic, for it is broken-winded learning.

"Is it not common," says he, "in modern England to reject authorities both in Church and State, to look with contempt on the humbler and more peculiarly christian virtues of contentment and submission, and to cul-

tivate the intellectual at the expense of the moral part of our nature? If these and other dangerous tendencies of a similar nature are at work among ourselves, as they undoubtedly are, it is useful and interesting to observe them in fuller operation and more unchecked luxuriance in America."

Now, it is very satisfactory, that the Americans, a race of yesterday, who have had no opportunity as yet of coping with the deep research and master-minds of Europe, should in half a century have leaped into such a position in the civilized world as to have exceeded the Englishman in all the most useful relations of life, as well as in all its darker and more dangerous features; very satisfactory indeed that the mixed race peopling the United States should be better and worse than that nation to which the world, by universal consent, has yielded the palm of superiority in all the arts and in all the sciences of modern acquirement.

Wherein do the Americans exceed the sons of Britain? In history, in policy, in poetry,

in mathematics, in music, in painting, or in any of the gifts of the Muses? Are they more renowned in the dreadful art of war? or in the mild virtues of peace? Is the fame of America a wonder and a terror to the four quarters of the globe?—We may fearlessly reply in the negative. The outer barbarian knows the American but as another kind of Englishman. It will yet take him some centuries to distinguish between the original and the offspring.

It is, in short, as untenable as an axiom in policy or history, that the American exceeds the Briton in the development of mind, as it is that the American exceeds the Briton in the development of the baser qualities of our nature.

When the insatiate thirst for dollars, dollars, dollars, has subsided, then the American may justly rear his head as an aspirant for historic fame. His land has never yet produced a Shakespeare, a Johnson, a Milton, a Spenser, a Newton, a Bacon, a Locke, a Coke, or a Rennie. The utmost America has yet achieved

is a very faint imitation of the least renowned of our great writers, Walter Scott.

In diplomacy I deny also the palm. For although India is a case in point, like as Texas, yet even there we have never first planted a population with the express purpose of ejecting the lawful government, but have conquered where conquest was not only hailed by the enslaved people but was a positive benefit, by the introduction of mild and equitable laws instead of brutal and bloody despotisms. We have not snatched from a weak republic, whose principles had been expressly formed on our own model, that which poverty alone obliged it to relinquish. If the writer, who appears to be an excellent man and a good christian, had lived for several years on the borders of the eagerly desired Canada, I very much doubt whether he would have seen such a *couleur de rose* in the transactions of the mighty commonwealth, where the rulers are the ruled, and where education, intellect, integrity, innocence, and wealth must all alike bow before the Juggernaut of an unattainable perfection of equality.

If Bill Johnson, the mail robber and smuggler, is as good as William Pitt or any other William of superior mind, why then the sooner the millennium of democracy arrives the better. It is unfortunate for the present generation—what it will be for the next no man can pretend to say—that this debasing principle is gaining ground not only in Canada but in England. A reflecting mind has no objection to the creed that all men were created equal; but history, sacred and profane, plainly shows that mind as well as matter is afterwards, for the wisest of purposes, very differently developed.

Does the meanest white American, the sweeper of Broadway, if there be such a citizen, believe in this perfection of equality amongst men as a fundamental axiom of the rights of man? Place a black sweeper of crossings in juxtaposition, and the question will very soon solve itself. Why, the free and enlightened citizens will not even permit their black or coloured brethren to worship their common Creator in the same pew with

themselves—it is horror, it is degradation! And yet there is a universal outcry about sacred liberty and equality all over the Union. The angels weep to witness the tricks of men placed in a little brief authority. Can such a state of things last as that, where the Irish labourer is treated as an inferior being in the scale of creation, and the Negro, or the offspring of the Negro and the white, is branded with the stigma of servile? It cannot—it will not. Either let democracy assume its true and legitimate features, or let it cease—for the re-action will be a fearful one, as dread and as horribly diabolical as that which the folly of the aristocracy of old France brought on that devoted land.

I have said, and I repeat it, that a residence on the borders of Canada and the United States for some time will cure a reflecting mind of many long cherished notions concerning the relative merits of a limited monarchy and of a crude democracy.

The man who views the border people of the United States with calm observation will

soon come to the conclusion that a state of government, if it may be so called, where the commonest ruffian asserts privileges which the most educated and refined mind never dreams of, is not an enviable order of things.

In the first fury of a war with England, who were the promoters? the mob on the borders. Who hoped for a new sympathy demonstration, in order to annex Canada? the people of the Western States, who, far removed from the possibility of invasion, valiantly resolve to carry fire and sword among their unoffending brethren.

The intelligence and the wealth of the United States are passive ; they are physically weak, and therefore succumb to the dictation of the rude masses. And what keeps up this singular action, but the constantly-recurring elections, the incessant balloting and voting, the necessity which every man feels hourly of saving his substance or his life from the devouring rapacity of those who think that all should be equal !

If the government, acutely sensible that war

is an evil which must cripple its resources, is unwilling to engage in it, both from principle and from patriotism, it must yield if the mob wills it, or forfeit the sweets of office and of power. Hence, few men enter upon the cares of public life in the States now-a-days who are of that frame of mind which considers personal expediency as worthy of deep reflection. What would Washington have said to such a system ?

The batteries or fortalices of Niagara and of Mississagua have led to a digression quite unintentional and unforeseen, which must terminate for the present with a different view from that of the author of the Letters above-mentioned : and let us hope fervently that the New World has not yet arrived at such a consummation as that of surpassing the vices and crimes of the Old, as we are certain it has not yet achieved such a moral victory as that of outrunning it in the race of scientific or mechanic fame. England is no more in her dotage than America is in her nonage. The former, without vanity or want

of verity be it spoken, is as pre-eminent as the latter is honestly and creditably aspiring.

The writer above quoted says their ships sail better, and are manned with fewer hands. We grant that no nation excels the United States in ship-building, and that they build vessels expressly for sailing ; but for one English ship lost on the ocean, there are three of the venturous Americans ; for one steam-vessel that explodes, and hurls its hundreds to destruction, in England or Canada, there are twenty Americans.

In England, the cautious, the slow and the sure plan prevails ; in America, the go-ahead, reckless, dollar-making principle prevails ; and so it is through every other concern of life. A hundred ways of worshipping the Creator, after the christian form, exist in America, where half a dozen suffice in England.

Time is money in America ; the meals are hurried over, relaxations necessary to the enjoyment of existence forbidden—and what

for? to make money. To what end? to spend it faster than it is made, and then to begin again. You have only a faint shadow of the immense wealth realized in England by that of the merchant or the shopkeeper in the States. Capital there is constantly in a rapid consumption; and as the people engaged in the feverish excitement of acquiring it are in the latter country, from their habits, short-lived, so the opposite fact exhibits itself in England. There are no Rothschilds, no railway kings in America. Time and the man will not admit of it. John Jacob Astor is an exception to this fact.

On landing at Niagara, the difference of climate between it and Toronto is at once perceived. Here you are on sandy, there on clayey soil. Here all is heat, there moisture. I tried hard for several seasons to bring the peach to perfection at Toronto, only thirty-six miles from Niagara, without success; at Niagara it grows freely, and almost spontaneously, as well as the quince. The fields and the gardens of Niagara are a fortnight or

more in advance of those of Toronto. Strange that the passage of the westerly winds across Ontario should make such a difference !

Niagara is a grand racing-stand, where all the loafers of the neighbouring republic congregate in the autumn ; I was unfortunately present at the last races, and never desire to repeat my visit at that season. Blacklegs and whitelegs prevail ; and the next morning the course was strewed with the bodies of drunken vagabonds. It appears to me very strange that the gentry of the neighbourhood suffer a very small modicum of ephemeral newspaper notoriety to get the better of their good sense. The patronage of such a race-course as that of Niagara, so far from being an honour, is the reverse. It is too near the frontier to be even decently respectable ; nor is the course itself a good one, for the sand is too deep. Many a young gentleman of Toronto, who thinks that he copies the aristocracy of England by patronizing the turf, finds out to his own loss and sorrow that it would have been much better to have had his

racing qualifications exhibited nearer his own door; and there cannot possibly be a greater colonial mistake committed than to fancy that grooms, stable - boys, and blacklegs, are now the advisers and companions of our juvenile nobility.—That day has passed!

It is very unfortunate that very false ideas exist in some of the colonies of the manners and customs of high life in England. The grown-up people often fancy that cold reserve, and an assumption of great state, indicate high birth and breeding. The younger branches seem frequently to think that there is no such thing at home as the period of adolescence; consequently, you often see a pert young master deliver his unasked opinion and behave before his seniors and superiors as though he wanted to intimate that he was wiser in his generation than they.

In crossing to Niagara, we had a specimen of the precocious colonist of 1845. The table of the captain of the boat, like that of his respected father, was good and decorously conducted, and there were several ladies and some

most respectable travelled Americans at dinner. A very young gentleman, who boasted how much he had lost at the races, how much they had gambled, and how much they drank of champagne the night before—champagne, by the by, is thought a very aristocratic drink among psuedo-great men, although it is common as ditch-water in the United States—engrossed the whole conversation of the dinner-table, picked his teeth, took up the room of two, called the waiter fifty times, and ended by ordering the cheese to be placed on the table before the pies and puddings were removed. The company present rose before the dessert appeared, thoroughly disgusted ; and I afterwards saw this would-be man peeping into the windows of the ladies'-cabin, and performing a thousand other antic tricks, cigar in mouth, for which he would in England have met with his deserts.

The precociousness of Transatlantic children is not confined to the United States—it is equally and unpleasantly visible in Canada.

The Americans who travel, I can safely say, are not guilty of these monstrous absurdities. I have crossed the Atlantic more than once with boys of from seventeen to twenty, who have left college to make the grand tour, without ever observing any thing to find fault with. The American youth is observant, and soon discovers that attempting to do the character of men before his time in the society of English strangers invariably lowers instead of raising an interest.

There is a good caricature of this in an American book, I forget its title, written some time ago, to show the simplicity, gullibility, and vindictiveness of our Trollopean travellers. It is a boy of sixteen, or thereabouts, cigar in the corner of his mouth, hat cocked on three curls, and all the modern etceteras of a complete youth, saying to his father, "Here, take my boots, old fellow, and clean them." The father looks a little amazed, upon which the manikin ejaculates, "Why don't you take them? what's the use of having a father?"

There will be a railway smash in this, as

as well as in the locomotive mania. Republicanism towards elders and parents is unnatural; the child and the man were not born equal.

I remember reading in a voluminous account of the terrors of the French revolution a remarkable passage:—servants denounced masters, debtors denounced creditors, women denounced husbands, children denounced parents, youth denounced protecting age; gratitude was unknown; a favour conferred led to the guillotine: but never, never in that awful period, in that reign of the vilest passions of our nature over reason, was there one instance, one single instance, of a parent denouncing its child.

It is not a good sign when extreme youth pretends to have discovered the true laws of the universe, when the son is wiser than the father, or when immature reason usurps the functions of the ripened faculties.

I have put this together because I hear hourly parents deprecating the system of education in the greatest city of Western Canada;

because I hear and see children of fourteen swaggering about the streets with all the consequence of unfledged men, smoking cigars, frequenting tavern-bars and billiard-rooms, and no doubt led by such unbridled license into deeper mysteries and excesses ; because I hear clergymen lament that boys of that age lose their health by excesses too difficult of belief to fancy true. Surely a salutary check in time may be applied to such an evil.

But liberty and equality, as I said before, are extending on both sides of the Atlantic : and in their train come these evils, simply because liberty and equality are as much misunderstood as real republicanism and limited monarchy are.

CHAPTER VIII.

The old Canadian Coach—Jonathan and John Bull passengers—"That Gentleman"—Beautiful River, beautiful drive—Brock's Monument—Queenston—Bar and Pulpit—Trotting horse Railroad—Awful accident—The Falls once more—Speculation—Water privilege—Barbarism—Museum—Loafers—Tulip-trees—Rattlesnakes—The Burning Spring—Setting fire to Niagara—A charitable Woman—The Nigger's Parrot—John Bull is a Yankee—Political Courtship—Lundy's Lane—Heroine—Welland Canal.

I can make no stay at Niagara for the present; but, after resting awhile at Howard's Inn, which is the most respectable one in the town, proceed in his coach to Queenston.

The old Canadian coach has not yet quite vanished before modern improvement. It is a mighty heavy, clumsy conveniency, hung on leather springs, and looking for all the world as if elephants alone could move it along; and, if it should upset, like Falstaff, it may ask for levers to lift it up again.

We had on board the coach an American, of the species Yankee, a thorough bluff, rosy, herculean, Yorkshire farmer, and several highly respectable females.

I will not say Jonathan did not spit before them, for he is to the manner born; but, although of inferior grade, if there can be such a thing mentioned respecting a citizen of the United States, and particularly of "the Empire State," of which he was, to his credit be it said, he treated the females with that courtesy, rough as it is, which seems innate with all Americans.

A stormy discussion arose on the part of John Bull, who hated slavery, disliked spitting, got angry about Brock's monument, and, in short, looked down with no small share of contempt upon the man of yesterday, whose ideas of right and wrong were so diametrically opposed to his own, and who very sententiously expressed them.

John told him that the only thing he had never heard in his travels through the Northern and Western States—where he had been to

look at the land with a view to purchase, either there or in Canada, as might be most advisable—the only thing he had never heard was that all the citizens of the United States were all “gentlemen.”

“I guess you didn’t hear with both ears, then, for you always must have remarked that whenever one citizen spoke of another, he said ‘that gentleman.’ ”

John laughed outright. “No, friend, I never did hear your white gentlemen call a nigger ‘that gentleman;’ so, you see, all your folks ain’t equal, and all ain’t gentlemen. Here, in Canada, I have heard a blacky called ‘that gentleman;’ and, by George, if many more of your runaway slaves cross the border, they will soon be the only gentlemen in Canada, for they are getting very impudent and very numerous.”

This is, in a measure, true ; such troops of escaped negroes are annually forwarded to Canada by the abolitionists that the Western frontier is overrun already, and the impudence of these newly free knows no bounds. But

they cordially hate both the Southern slaveholders and the abolitionists.

Talking of slavery, pray read an account of it from an American of the Northern States.

“ New Orleans, January 26, 1846.

“ A man may be no abolitionist — I am not one; he may think but little on the subject of slavery—it has never troubled me one way or the other : but let him mark the records of the glorious battles of the Revolution; let him notice the Eagle of Liberty, and all the emblems of Independence, Freedom, and the rights of man; let him muse on the thoughts they awaken, and then behold the actualities of life around him. Suddenly the sharp rap of an auctioneer’s hammer startles him, and the loud striking of the hour of twelve will divert his attention to the throng of men around him, and the appearance of three or four men on raised stands in different parts of the Rotunda, who are calling the attention of those around him, at the same time unrolling a hand-bill that the stranger

has noticed in the most conspicuous places in the city, printed in French and English, announcing the sale of a lot of fine, likely slaves; at the same time, he observes maps of real estates spread out—everything in fact around him denoting a ‘busy mart where men do congregate,’ as it really is.

The auctioneer, making the most noise, attracts his attention first; joining the crowd in front of the stand, he observes twelve or fifteen negroes of all ages and both sexes standing in a line to the left of the auctioneer; they are comfortably, and some of them neatly dressed, particularly the women, with their yellow Madras handkerchiefs tied around their heads, and their bright, showy dresses; but they have a look that irresistibly causes him to think back for a comparison to the objects before him, and it seems strange that it should bring to mind some market or field where he has sometimes seen cattle offered for sale, whose saddened look seemed to forbode some evil to them; but the animal look is somewhat redeemed by the smiles and plays

of the little *piccaninies*, who seem to wonder why they are there, with so many men looking at them.—Now for business.

“ ‘ Maria, step up here. There, gentlemen, is a fine, likely wench, aged twenty-five ; she is warranted healthy and sound, with the exception of a slight lameness in the left leg, which does not damage her at all. Step down, Maria, and walk.’ The woman gets down, and steps off eight or ten paces, and returns with a slight limp, evidently with some pain, but doing her best to conceal her defect of gait. The auctioneer is a Frenchman, and announces everything alternately in French and English. ‘ Now, gentlemen, what is bid ? she is warranted, elle est gurantie, and sold by a very respectable citizen. 250 dollars, deux cent et cinquante dollars : why, gentlemen, what do you mean ! Get down, Maria, and walk a little more. 275, deux cent soixante et quinze, 300, trois cents !—go on, gentlemen—325, trois cents et vingt cinq ! once, twice, ah ! 350, trois cents et cinquante : une fois ! deux fois !

going, gone, for 350 dollars. A great bargain, gentlemen.'

"My attention is called to the opposite side of the room: 'Here, gentlemen, is a likely little orphan yellow girl, six years old—what is bid? combien? thirty-five dollars, trente cinq, fifty dollars, cinquante dollars, thank you.' Finally, she is knocked down at seventy-five dollars.

"Why, there is a whole family on that other stand; let us see them. 'There, gentlemen, is a fine lot: Willy, aged thirty-five, an expert boy, a good carpenter, brickmaker, driver, in fact, can do anything, il sait faire tout. His wife, Betty, is thirty-three, can wash, cook, wait on the table, and make herself generally useful; also their boy George, five years old; you will observe, gentlemen, that Betty est enceinte. Now what is bid for this valuable family?' After a lively competition, they are bid off at 1,550 dollars, the whole family.

"As I have before remarked, everything is done in French and English; even the negroes speak both languages. I saw one poor old

negro, about sixty, put up, but withdrawn, as only 270 dollars were bid for him. While waiting to be sold, they are examined and questioned by the purchasers. One young girl, about sixteen or eighteen, was being inspected by an elderly, stern, sharp-eyed, horse-jockey looking man, who sported his gold chains, diamond pin, ruffles, and cane: 'How old are you?' 'I don't know, sir.' 'Do you know how to eat?' 'Everybody does that,' she said sullenly.

"Passing up the Esplanade next morning, (Sunday) I saw some forty or fifty very fine-looking negroes and negresses, all neatly dressed, standing on a bench directly in front of a building, which I took to be a meeting or school house: walking by, a genteel-looking man stepped up and asked me if I wished to buy a likely boy or girl. Telling him I was a stranger, and asking for information, he told me it was one of the slave-markets; that they stood there for examination, and that he had sold 500,000 dollars worth and sent them off that morning.

“The above facts are some of the singular features (to a Northerner) of this remarkable place, and I assure you that I ‘nothing extenuate, or set down aught in malice;’ but may the time come when even a black man may say, ‘I am a man!’

“NORTHROP.”

I once relieved a poor black wretch who was starving in the streets of Kingston, and told him where to go to get proper advice and protection: all the thanks I received were that he was sorry he ran away, for he had been a waiter somewhere in the South, and got a good many dollars by his situation; whereas, he said, Canada was a poor country, and he had no hope of thriving in it.

The lower class of negroes in Canada, for there are several classes among even runaways, are very frequently dissolute, idle, impudent, and assuming—so difficult is it for poor uneducated human nature to bear a little freedom.

The coloured people, if they get at all up

in the world, assume vast airs, but there are very many well-conducted people among them. As yet neither coloured people nor negroes have made much advance in Canada.

John Bull had visited almost every portion of the Northern and Western States, was a shrewd, observing character, and had come to the conclusion, which he very plainly expressed, that the state of society in the Union was not to his taste, that he could procure lands as cheap and as good for his gold in Canada, and that to Canada he would bring his old woman and his children.

“For,” said he, “in the London or Western districts of Upper Canada, the land is equal to any in the United States, the climate better, and by and by it will supply all Europe with grain. Settling there, an Englishman will not always be put in mind of the inferiority of the British to the Americans, will not always be told that kings and queens are childish humbugs, and will not have his work hindered and his mind poisoned by

It is the restless rage for politics, the ever present desire for dollars, which has brought about this state of things ; the young husband seeks the bar-room as a merchant does the Change ; and thus, except in the wealthy class, or among the contemplative and retired, there is no such thing as private life in the northern cities and towns. Huge taverns, real wooden gin palaces, tower over the tops of all other buildings, in every border village, town, and city ; and a good bar is a better business than any other. Thus in Lewiston, in Buffalo, in short, in every American border town, the best building is the tavern, and the next best the meeting-house ; both are fashionable, and both are anything but what they should be ; for he who keeps the best liquors, and he who preaches most pointedly to the prevailing taste, makes the most of his trade. The voluntary system is a capital speculation to the publican as well as to the parson ; but, unfortunately, it is more general with the former than with the latter.

The Niagara frontier is a rich and a fertile

portion of Canada, surrounded almost by water, and intersected by rivers, and the Welland Canal, with an undulating surface in the interior. It grows wheat, Indian corn, and all the cereal gramina to perfection, whilst Pomona lavishes favours on it; nor are its woods less prolific and luxuriant. Here the chestnut, with its deep green foliage and its white flowers, forms a pleasing variety to the sylvan scenery of Canada.

It would be, from its healthiness alone, the pleasantest part of Canada to live in, but it is too near the borders where sympathizers, more keen and infinitely more barbarous than those on the ancient Tweed, render property and life rather precarious; and, therefore, in war or in rebellion, the Niagara frontier is not an enviable abode for the peaceable farmer or the timid female.

The ascent to the plateau above Queenston is grand, and the view from the summit very extensive and magnificent; embracing such a stretch of cultivated land, of forest, of the habitations of men, and of the apparently

boundless Ontario, the Beautiful Lake, that it can scarcely be rivalled.

The railroad has, however, spoiled a good deal of this; it runs from the summit of the mountain, along its side or flank, inland to Chippewa, beyond the Falls; and you are whirled along, not by steam, but by three trotting horses, at a rapid rate, through a wood road, until you reach the Falls, where you obtain just a glimpse and no more of the Cataract.

On the top of the mountain, as a hill four or five hundred feet above the river is called, is a place which was the scene of an awful accident. The precipice wall of the gorge of the Niagara is very close to the road, but hidden from it by stunted firs and bushes. Colonel Nichols, an officer well known and distinguished in the last American war, was returning one winter's night, when the fresh snow rendered all tracks on the road imperceptible, in his sleigh with a gallant horse. Merrily on they went; the night was dark, and the road makes a sudden turn just

at the brink, to descend by a circuitous sweep the face of the hill into Queenston. Either the driver or the horse mistook the path, and, instead of turning to the left, went on edging to the right.

The next day search was made: the marks of struggling were observed on the snow; the horse had evidently observed his danger; he had floundered and dashed wildly about; but horse, sleigh, and driver, went down, down, down, at least two hundred feet into the abyss below; and sufficient only remained to bear witness to the terrific result.

The railroad (three horse power) takes you to the Falls or to Chippewa. If you intend visiting the former, and desire to go to the Clifton House, the best hotel there, you are dropped at Mr. Lanty Mac Gilly's, where the four roads meet, one going to the Ferry, one to Drummondville, a village at Lundy's Lane, now cut off from the main road; the other you came by, and the continuation of which goes to Chippewa, where a steamer, called the Emerald, is ready to take you to the city of

Buffalo in the United States. As I shall return by way of Buffalo from the extreme west of Canada, we will say not a word about any thing further on this route at present than the Falls, and perhaps the reader may think the less that is said about them the better.

But, gentle reader, although it be a well-worn tale, I had not seen the Falls for five years, and I wish to tell you whether they are altered or improved ; and most likely you will take some little interest in so old a friend as the Falls of Niagara ; for you must have read about those before you read Robinson Crusoe, and have had them thrust under your notice by every tourist, from Trollope to Dickens. They say, *on dit*, I mean, which is not translatable into English, that this is the age of Materialism and Utilitarianism. By George, you would think so indeed, if you had the chance of seeing the Falls of Niagara twice in ten years. They are materially injured by the Utilitarian mania. The Yankees put an ugly shot tower on the brink of the Horseshoe at the beginning of that era, and

they are about to consummate the barbarism, by throwing a wire bridge, if the British government is consenting, over the river, just below the American Fall. But Niagara is a splendid "Water Privilege," and so thought the Company of the City of the Falls—a most enlightened body of British subjects, who first disfigured the Table Rock, by putting a water-mill on it, and now are adding the horror of gin-palaces, with sundry ornamental booths for the sale of juleps and sling, all along the venerable edge of the precipice, so that trees of unequalled beauty on the bank above, trees which grow no where else in Canada, are daily falling before the monster of gain.

What they will do next in their freaks it is difficult to surmise; but it requires very little more to show that patriotism, taste, and self-esteem, are not the leading features in the character of the inhabitants of this part of the world.

If the Colossus of Rhodes could be remodelled and brought to the Falls, one leg

standing in Canada, and the other in the United States, there would be a company immediately formed for hydraulic purposes, to convey a waste pipe from the tips of the fingers as far as Buffalo; and another to light the paltry village of Manchester, all mills and mint-juleps, with the natural gas which would be made to feed the lamp. A grog-shop would be set up in his head; telescopes would be poked out of his eyes, and philosophers would seat themselves on his toes, to calculate whether the waters of the British Fall could not be dammed out, so as to turn a few cotton mills more in Manchester, as it is called, which scheme some Canadian worthy would upset, by resorting to Mr. Lyell's proof that the whole river might once have flowed, and may again be made to flow, down to St. David's—thus, by expending a few millions, cutting off Jonathan's chance.

But it is of no use to joke on this subject; Niagara is, both to the United States and to England, but especially to Canada, a public property. It is the greatest wonder of the

visible world here below, and should be protected from the rapacity of private speculations, and not made a Greenwich fair of; where pedlars and thimble-riggers, niggers and barkers, the lowest trulls and the vilest scum of society, congregate to disgust and annoy the visitors from all parts of the world, plundering and pestering them without control.

The only really pretty thing on the British side is the Museum, the result of the indefatigable labours of Mr. Barnett, a person who, by his own unassisted industry, has gathered together a most interesting collection of animals, shells, coins, &c., and has added a garden, in which all the choicest plants and flowers of North America and of Britain grow, watered by the incessant spray of the Great Fall. In this garden I saw, for the first time in Canada, the English holly, the box, the heath, and the ivy; and there is a willow from the St. Helena stock.

It requires unremitting watchfulness, however, to keep all this together, for *loafers* are

rife in these parts. He had gathered a very choice collection of coins, which was placed in a glass case in the Museum. A loafer cast his eye upon them, visited the Museum frequently, until he fully comprehended the whereabouts, and then, by the help of a comrade or two, broke a window-pane, passed through a glazed division of stuffed snakes, &c., and bore off his prize in the dead of the night. By advertising in time, and by dint of much exertion, the greater part was recovered, but the proprietor has not dared publicly to exhibit them since.

He is now forming a menagerie, and also has a collection of fossils and minerals from the neighbourhood, with a camera obscura. He is, in short, a specimen of what untiring industry can accomplish, even when unassisted.

There are some tulip-trees near the Falls, but this plant does not grow to any size so far north ; and, although native to the soil, it is, perhaps, the extreme limit of its range. The snake-wood, a sort of slender bush, is

found here, with very many other rare Canadian plants, which are no doubt fostered by the continual humidity of the place; and, if you wish to sup full of horrors,¹ Mr. Barnett has plenty of live rattlesnakes.

To wind up all, the Americans are going to put up another immense gin-palace on the opposite shore; and, as a climax to the excellent taste of the vicinage, they are about to place a huge steamboat to cross the rapids at the foot of the Manchester Falls. The next speculation, as I hinted above, must be to turn the Niagara into the Erie, or into the Welland Canal, and make it carry flour, grind wheat, and do the duty which the political economists of this thriving place consider all rivers as alone created for.

One traveller of the Utilitarian school has recorded, in the traveller's album at the Falls,

¹ This puts me in mind of the vulgar received opinion that my godfather Fuseli supped on pork-steaks, to have horrid dreams. Originally said in joke, this absurd story has been repeated even by persons affecting respectability as writers. His Greek learning alone should have saved his memory from this.

the number of gallons of water running over to waste per minute; and another writes, "What an almighty splash!"

I went once more to see the Burning Spring, and have no doubt whatever that the City of the Falls, that great pre-eminent humbug, if it had been built, might have easily been lit by natural gas, as it abounds every where in the neighbourhood, the rock under the superior Silurian limestone being a shale containing it, as may be evidenced by those visitors, who are persuaded to go under "the Sheet of Water," as the place is called where the Table Rock projects, and part of the cataract slides over it; for, on reaching the angle next to the spiral stair, a strong smell is plainly perceptible, something between rotten eggs and sulphur; and there you find a little trickling spring oozing out of the precipice tasting of those delectable compounds.

A Yankee, with the soaring imagination of that imaginative race, proposes to set fire to the Horse-shoe Fall, and thus get up a grand nocturnal exhibition, to which the Surrey

Zoological pyrotechny would bear the same ratio as a sky-rocket to Vesuvius.

There is no great impossibility in this fact, if it was "not a fact" that the rush of the Fall disturbs the superincumbent gases too much to permit it; for there can be but little doubt that there is plenty of *materiel* at hand, and, some day or other, a lighthouse will be lit with it to guide sleepy loons and other negligent water-fowl over the Falls. I wonder they do not get up a Carburetted Hydrogen Gas Company there, with a suitable engineer and railway, so that visitors might cross over to Goat Island on an atmospheric line. There are plenty of railway stags on both shores, if you will only buy their stock to establish it; and, at all events, it would improve the City of the Falls, which now exhibits the deplorable aspect of three stuccoed cottages turned seedy, and a bare common, in place of a magnificent grove of chestnut trees, which formerly almost rivalled Greenwich Park:

But the crowning glory of "the City" is

the Reflecting Pagoda, a thing perched over Table Rock bank, very like a huge pile engine, with a ten-shilling mirror, where the monkey should be. Blessings on Time! though he is a very thoughtless rogue, he has touched this grand effort of human genius in the wooden line slightly, and it will soon follow the horrid water-mill which stood on that most singular and indescribable freak of Nature, the Table Rock. I would have forgiven Lett, the sympathizer, if, instead of assassination and the blowing-up of Brock's Monument, he had confined his attentions to a little serious Guy Fauxing at the Mill and the Reflecting Pagoda.

Niagara—Ne-aw-gaw-rah, thou thundering water! thy glories are departing; the abominable Railway Times has driven along thy borders; and, if I should live to see thee again ten years hence, verily I should not be astounded to find thee locked-up, and a station-house staring me in the visage, from that emerald bower, in thy most mysterious recess, where the vapour is rose-coloured, and

the bright rainbow alone now forms the bridge from the Iris Rock !

I was so disgusted to see the spirit of pelf, that concentration of self, hovering over one of the last of the wonders of the world, that I rushed to the Three Horse Railway, and soon forgot all my misery in scrambling for a place ; for there was no alternative. There were only three carriages and one open cart on the rail ; the three aristocratic conveniences were full ; and the coal-box — for it looked very like one — was full also, of loafers and luggage ; so I despaired of quitting the Falls almost as much, by way of balance, as I rejoiced when they once again met my ken.

But women are women all the world over ; a black lady nursed Mungo Park, when he was abandoned by the world ; and a charitable she-Samaritan crowdged to make room for a disconsolate wayfarer.

I felt very much as the nigger's parrot at New York did.

Blacky was selling a parrot, and a gentleman asked him what the bird could do. Could

he speak well? “No, massa; no peaky at all.” “Can he sing?” — “No, massa; no peaky, no singy.” “Why, what can he do, then, that you ask twenty dollars for him?” “Oh! massa, golly, he thinky dreadful much.” So, when the daughter of Eve made way for me in the rail-car, why I thinky very much, that, wherever a stranger meets unexpected kindness, it is sure to be a woman that offers it.

There were the usual host of American travellers in the cars; and as one generally gets a fund of anecdote and amusement on these occasions, from their habits of communicativeness, I shall put the English reader in possession of the meaning of words he often sees in the perusal of American newspapers and novels which I gathered.

New York is the Empire State, and with the following comprises Yankee land, which word Yankee is most properly a corruption of Yengeese, the old Indian word for English; so that, by parity of reasoning, John Bull is, after all, a Yankee.

Massachusetts . . .	The Bay State, Steady Habits.
Rhode Island . . .	Plantation State.
Vermont	Banner State, or Green Mountain Boys.
New Hampshire .	The Granite State.
Connecticut	Freestone State.
Maine	Lumber State.

These are the Yankees, *par excellence* ; and it is not polite or even civil for a traveller to consider or mention any of the other States as labouring under the idea that they ever could, by any possibility, be considered as Yankees ; for, in the South, the word Yankee is almost equivalent to a tin pedlar, a sharp, Sam Slick.

Pennsylvania	is	The Keystone State.
New Jersey	The Jersey (pronounced Jar-say) Blues.
Delaware	Little Delaware.
Maryland	Monumental.
Virginia	The Old Dominion, and sometimes the Cavaliers.
North Carolina	.	Rip Van Winckle.
South Carolina	.	The Palmetto State.
Georgia	Pine State.
Ohio	The Buckeyes.
Kentucky	The Corncrackers.
Alabama	Alabama.
Tennessee	The Lion's Den.

Missouri The Pukes.
Illinois The Suckers.
Indiana The Hoosiers.
Michigan The Wolverines.
Arkansas The Toothpickers.
Louisiana The Creole State.
Mississippi The Border Beagles.

I do not know what elegant names have been given to the Floridas, the Iowa, or any of the other territories, but no doubt they are equally significant. Texas, I suppose, will be called Annexation State.

This information, although it appears frivolous, is very useful, as without it much of the perpetual war of politics in the States cannot be understood. Yankee in Europe is a sort of byword, denoting repudiation and all sorts of chicanery ; but the Yankee States are more English, more intellectual, and more enterprising than all the rest put together ; and Pennsylvania should be enrolled among them.

In short, in the north-east you have the cool, calculating, confident, and persevering Yankee ; in the south, the fiery, somewhat

aristocratic, bold, and uncompromising American, full of talent, but with his energies a little slackened by his proximity to the equator and his habitual use of slave assistance.

In the central States, all is progressive; a more agricultural population of mixed races, as energetic as the Yankee, but not possessing his advantages of a seaboard. The Western States are the pioneers of civilization, and have a dauntless, less educated, and more turbulent character, approaching, as you draw towards the setting sun, very much to the half-horse, half-alligator, and paving the way for the arts and sciences of Europe with the rifle and the axe.

It is these Western States and the vast labouring population of the seaboard, who have only their manual labour to maintain them, without property or without possessions of any kind, that control the legislature, their numerical strength beating and bearing down mind, matter, and wealth.

Doubtless it is the bane of the republican institution, as now settled in North America,

that every man, woman, and child, in order to assert their equality, must meddle with matters far above the comprehension of a great majority; for, although the people of the United States can, as George the Third so piously wished for the people of England, read their bible, whenever they are inclined to do so, yet it is beyond possibility, as human nature is constituted, that all can be endowed with the same, or any thing like the same, faculties. Too much learning makes them mad; and hence the constant danger of disruption, from opposing interests, which the masses—for the word mob is not applicable here—must always enforce. The north and the south, the east and the west, are as dissimilar in habits, in thought, in action, and in interests, as Young Russia is from Old England, or as republican France was from the monarchy of Louis the Great.

Hence is it that a Canadian, residing, as it were, on the Neutral Ground, can so much better appreciate the tone of feeling in America, as the United States' people love to call

their country, than an Englishman, Scotchman, or Irishman can ; for here are visible the very springs that regulate the machinery, which are covered and hidden by the vast space of the Atlantic. You can form no idea of the American character by the merchants, travelling gentry, or diplomatists, who visit London and the seaports. You must have lengthened and daily opportunities of observing the people of a new country, where a new principle is working, before you can venture safely to pronounce an attempt even at judgment.

Monsieur Tocqueville, who is always lauded to the skies for his philosophic and truly extraordinary view of American policy and institutions, has perhaps been as impartial as most republican writers since the days of the enthusiast Volney, on the merits or demerits of the monarchical and democratic systems ; yet his opinions are to be listened to very cautiously, for the leaven was well mixed in his own cake before it was matured for consumption by the public.

Weak and prejudiced minds receive the doctrines of a philosopher like Tocqueville as dictations: he pronounced *ex cathedra* his doctrines, and it is heresy to gainsay them. Yet, as an able writer in that universal book, "The Times," says, reason and history read a different sermon.

That democracy is an essential principle, and must sooner or later prevail amongst all people, is very analogous to the prophecy of Miller, that the material world is to be rolled up as a garment, and shrivelled in the fire on the thirteenth day of some month next year, *or* the year after.

These fulminations are very semblable to those of the popes—harmless corruscations—a sort of aurora borealis, erratic and splendid, but very unreal and very unsearchable as to cause and effect.

There can be, however, very little doubt in the mind of a person whose intellects have been carefully developed, and who has used them quietly to reason on apparent conclusions, that the form of government in the

United States has answered a purpose hitherto, and that a wise one ; for the impatience of control which every new-comer from the Old World naturally feels, when he discovers that he has only escaped the dominion of long-established custom to fall under the more despotic dominion of new opinions, prompts him, if he differs, and he always naturally does, where so many opinions are suddenly brought to light and forced on his acquiescence, to move out of their sphere. Hence emigration westward is the result ; and hence, for the same reasons, the old seaboard States, where the force of the laws operates more strongly than in the central regions, annually pour out to the western forests their masses of discontented citizens.

The feeling of old Daniel Boone and of Leather Stockings is a very natural one to a half-educated or a wholly uneducated man, and no doubt also many quiet and respectable people get harassed and tired of the caucusing and canvassing for political power, which is incessantly going on under the modern system

of things in America, and take up their household gods to seek out the land flowing with milk and honey beyond the wilderness.

No person can imagine the constant turmoil of politics in the Northern States. The writer already quoted says, that there is “one singular proof of the general energy and capacity for business, which early habits of self-dependence have produced;—almost every American understands politics, takes a lively interest in them (though many abstain under discouragement or disgust from taking a practical part), and is familiar, not only with the affairs of his own township or county, but with those of the State or of the Union; almost every man reads about a dozen newspapers every day, and will talk to you for hours, (*tant bien que mal*) if you will listen to him, about the tariff and the Ashburton treaty.”

And he continues by stating that this by no means interferes with his private affairs; on the contrary, he appears to have time for both, and can reconcile “the pursuits of a

bustling politician and a steady man of business. Such a union is rarely found in England, and never on the Continent.”

But what is the result of such a union of versatile talent? Politics and dollars absorb all the time which might be used to advantage for the mental aggrandizement of the nation; and every petty pelting quidnunc considers himself as able as the President and all his cabinet, and not only plainly tells them so every hour, but forces them to act as *he* wills, not as *wisdom* wills. There is a Senate, it is true, where some of this popular fervour gets a little cooling occasionally: but, although there are doubtless many acute minds in power, and many great men in public situations, yet the majority of the people of intellect and of wealth in the United States keep aloof whilst this order of things remains: for, from the penny-postman and the city scavenger to the very President himself, the qualification for office is popular subservency.

Thus, when Mr. Polk thunders from the

Capitol, it is most likely not Mr. Polk's heart that utters such warlike notes of preparation, but Mr. Polk would never be re-elected, if he did not do as his rulers bid him do.

It may seem absurd enough, it is nevertheless true, that this political furor is carried into the most obscure walks of life, and the Americans themselves tell some good stories about it; while, at the same time, they constantly din your ears with "the destinies of the Great Republic," the absolute certainty of universal American dominion over the New World, and the rapid decay and downfall of the Old, which does not appear fitted to receive pure Democracy.¹

• They tell a good story of a political courtship in the "New York Mercury," as decidedly one of the best things introduced in a late political campaign :—

¹ One of the speakers against time, in a late debate on the Oregon question, quoted those fine lines about "The flag that braved a thousand years the battle and the breeze," and said its glory was departing before the Stars and Stripes, which were to occupy its place in the event of war, from this time forth and for ever.

“ Inasmuch,” says the editor, “ as all the States hereabouts have concluded their labours in the presidential contest, we think we run no risk of upsetting the constitution, or treading upon the most fastidious toe in the universe, by affording our readers the same hearty laugh into which we were betrayed.

“ Jonathan walks in, takes a seat and looks at Sukey ; Sukey rakes up the fire, blows out the candle, and don’t look at Jonathan. Jonathan hitches and wriggles about in his chair, and Sukey sits perfectly still. At length he musters courage and speaks—

“ ‘ Sewkey ?’

“ ‘ Wall, Jon-nathan ?’

“ ‘ I love you like pizan and sweetmeats ?’

“ ‘ Dew tell.’

“ ‘ It’s a fact and no mistake—wi—will—now—will you have me—Sew—ky ?’

“ ‘ Jon—nathan Hig—gins, what am your politics ?’

“ ‘ I’m for Polk, straight.’

“ Wall, sir, yew can walk straight to

hum, cos I won't have nobody that ain't for Clay ! that's a fact.'

" ' Three cheers for the Mill Boy of the Slashes !' sung out Jonathan.

" ' That's your sort,' says Sukey. ' When shall we be married, Jon—nathan ?'

" ' Soon's Clay's e—lect—ed.'

" ' Ahem, ahem !'

" ' What's the matter, Sukey ?'

" ' Sposing he ain't e—lect—ed ?'

" We came away."

Verily, Monsieur De Tocqueville, you are in the right—democracy is an inherent principle.

But the train is progressing, and we are passing Lundy's Lane, or, as the Americans call it, "The Battle Ground," where a bloody fight between Democracy and Monarchy took place some thirty years ago, and where

" The bones, unburied on the naked plain,"

still are picked up by the grubbers after curiosities, and the very trees have the balls still sticking in them.

Here woman, that ministering angel in the

hour of woe, performed a part in the drama which is worth relating, as the source from which I had the history is from the person who owed so much to her, and whose gallantry was so conspicuous.

Colonel Fitzgibbon, then in the 49th regiment, having inadvertently got into a position where his sword, peeping from under his great coat, immediately pointed him out as a British officer, was seized by two American soldiers, who had been drinking in the village public-house, and would either have been made prisoner or killed had not Mrs. Defield come to his rescue.

Mr. Fitzgibbon was a tall, powerful, muscular person, and his captors were a rifleman and an infantry soldier, each armed with the rifle and musket peculiar to their service. By a sudden effort, he seized the rifle of one and the musket of the other, and turned their muzzles from him; and so firm was his grasp, that, although unable to wrest the weapon from either of them, they could not change the position.

The rifleman, retaining his hold of his rifle with one hand, drew Mr. Fitzgibbon's sword with the other, and attempted to stab him in the side. Whilst watching his uplifted arm, with the intent, if possible, of receiving the thrust in his own arm, Mr. Fitzgibbon perceived the two hands of a woman suddenly clasp the rifleman's wrist, and carry it behind his back, when she and her sister wrenched the sword from him, and ran and hid it in the cellar.

Mrs. Defield was the wife of the keeper of the tavern where this officer happened to have arrived; an old man, named Johnson, then came forward, and with his assistance Mr. Fitzgibbon took the two soldiers prisoners, and carried them to the nearest guard, although at that moment an American detachment of 150 men was within a hundred yards of the place, hidden however from view by a few young pine-trees.

I am sure it will please the British reader to learn that the government granted 400 acres of the best land in the Talbot settle-

ment to Edward Defield, for his wife's and sister-in-law's heroic conduct.

Yet, such is the influence of example upon unreflecting minds dwelling on the frontiers of Upper Canada, that although in most instances the settlers are in possession of farms originally free gifts from the Crown, yet many of their sons were in arms against that Crown in 1837. Among these misguided youths was a son of Defield's, who surrendered, with the brigands commanded by Von Schultz, in the windmill, near Prescott, in the winter of 1838. He had crossed over from Ogdensburgh, and was condemned to a traitor's death.

From Colonel Fitzgibbon's statement to the executive, this lad, in consideration of his mother's heroism, was pardoned. Mrs. Defield is still living.

The three horses *en licorne* trot us on, and we pass Lundy's Lane, Bloody Run, a little streamlet, whose waters were once dyed with gore, and so back to Niagara, where I shall take the liberty of saying a few words concerning the Welland Canal.

The Welland Canal, the most important in a commercial point of view of any on the American continent—until that of Tehuantesegue, in Mexico, which I was once, in 1825, deputed to survey and cut, is formed, or that other projected through San Juan de Nicaragua—was originally a mere job, or, as it was called, a job at both ends and a failure in the middle, until it passed into the hands of the local government. If there has been any job since, it has not been made public, and it is now a most efficient and well conducted work, through which a very great portion of the western trade finds its way, in despite of that magnificent vision of De Witt Clinton's, the Erie Canal; and when the Welland is navigable for the schooners and steamers of the great lakes, it will absorb the transit trade, as its mouth in Lake Erie is free from ice several weeks sooner than the harbour of Buffalo.

The old miserable wooden locks and barge-way have been converted into splendid stone walls and a ship navigation; and, to give some

idea of the rising importance of the Welland Canal, I shall briefly state that the tolls in 1832 amounted to £2,432, in 1841 had risen to £20,210, and in 1843 to £25,573 3s. 10 $\frac{1}{4}$ d. : and when the works are fairly finished, which they nearly are, this will be trebled in the first year ; for it has been carefully calculated that the gross amount which would have passed of tonnage of large sailing craft only on the lakes, in 1844, was 26,400 tons, out of which only 7,000 had before been able to use the locks.

All the sailing vessels now, with the exception of three or four, can pass freely ; and three large steam propellers were built in 1844, whose aggregate tonnage amounted to 1,900 tons ; they have commenced their regular trips as freight-vessels, for which they were constructed, and have been followed by the almost incredible use of Ericson's propeller.

To show the British reader the importance of this work, connecting, as it does, with the St. Lawrence and Rideau Canals, the Atlantic Ocean, and Lakes Superior and Michigan, I

shall, although contrary to a determination made to give nothing in this work but the results of personal inspection or observation, use the scissors and paste for once, and thus place under view a table of all the articles which are carried through this main artery of Canada, by which both import and export trade may be viewed as in a mirror, and this too before the canal is fairly finished.

CHAPTER IX.

The Great Fresh-water Seas of Canada.

A sentimental journey in Canada is not like Sterne's, all about corking-pins and *remises*, monks and Marias, nor is it likely, in this utilitarian age, even if Sterne could be revived to write it, to be as immortal; nevertheless, let us ramble.

The Welland Canal naturally leads one to reflect on the great sources of power spread before the Canadian nation; for, although it will never, never be *la nation Canadienne*, yet it will inevitably some day or other be the Canadian nation, and its limits the Atlantic and the Pacific Oceans.

President Polk—they say his name is an abbreviation of Pollok—can no more dive into “the course of time” than that poet

could do, and it is about as vain for him to predict that the American bald eagle shall claw all the fish on the continent of the New World, as it is to fancy that the time is never to come when the Canadian races, Norman-Saxon as they are, shall not assert some claim to the spoils.

Canada is now happier under the dominion of Victoria than she could possibly be under that of the people of the States, and she knows and feels it. The natural resources of Canada are enormous, and developing themselves every day; and it needs neither Lyell, nor the yet unheard-of geologists of Canada to predict that the day is not far distant when her iron mines, her lead ores, her copper, and perhaps her silver, will come into the market.¹

I see, in a paper lying before me, that Colonel Prince, a person who has already flourished before the public as an enterprising

¹ Since I penned this, a company is forming to work valuable argentiferous copper-mines lately discovered on Lake Superior. The Americans are actually working rich mines of silver, copper, &c.

English farming gentleman, who combines the long robe with the red coat, has, with a worthy patriotism, obtained a very large grant of lands from the government to explore the shore of Lake Superior, in order to find whether the Yankees are to have all the copper to themselves ; and that, in searching a little to the eastward of St. Mary's Rapids, a very valuable deposit has been discovered, which has stimulated other adventurers, who have found another mine nearer the outlet of the lake and still more valuable, the copper of which, lying near the surface, yields somewhere about seventy-five per cent.¹

¹ A recent number of "The Scientific American," published in New York, contains the following: — Some of the British officers in Canada have lately made an important discovery of some of the richest copper-mines in the world. This discovery has created great excitement. Some of the officers, *en route* to England, are now in the city, and will carry with them some specimens of the ore, and among them one piece weighing 2,200 lbs. The ore is very rich, yielding, as we learn, seventy-two per cent. of pure copper. Some of the copper was taken from the bed of a river, and some broken off from a cliff on the banks. The latter is six feet long, four broad, and six inches thick.

We know that rich iron mines exist, and are steadily worked in Lower Canada; we know that a vast deposit of iron, one of the finest in the world, has lately been discovered on the Ottawa, a river in the township of M'Nab; and we know that nothing prevents the Marmora and Madoc iron from being used but the finishing of the Trent navigation. Lead abounds on the Sananoqui river, and at Clinton, in the Niagara district; whilst plumbago, now so useful, is abundant throughout the line, where the primary and secondary rocks intersect each other. Mr. Logan, employed by the government, *ex cathedra*, says there is no coal in Canada; but still it appears that in the Ottawa country it is very possible it may be found, and that, if it is not, Cape Breton and the Gaspé lands will furnish it in abundance; and, as Canada may now fairly be said to be all the North American territory, embraced between the Pacific somewhere about the Columbia river, Nova Scotia and New Brunswick, for a political union exists between all these provinces,

if an acknowledged one does not, coal will yet be plentiful in Canada.

Canada, thus limited, is now, *de facto*, ay, and *de jure*, British North America ; and a fair field and a fertile one it is, peopled by a race neither to be frightened nor coaxed out of its birthright.

The advantages of Canada are enormous, much greater, in fact, than they are usually thought to be at home.

The ports of St. John's and of Halifax, without mentioning fifty others, are open all the year round to steamers and sea-going vessels ; and when railroads can at all seasons bring their cargoes into Canada proper, then shall we live six months more than during the present torpidity of our long winters. John Bull, transported to interior Canada, is very like a Canadian black bear : he sleeps six months, and growls during the remaining six for his food.

Then, in summer, there is the St. Lawrence covered with ships of all nations, the canals carrying their burthens to the far West and

the great mediterraneans of fresh water, opening a country of unknown resources and extent.

These great seas of Canada have often engaged my thoughts. Tideless, they flow ever onward, to keep up the level of the vast Atlantic, and in themselves are oceans. How is it that the moon, that enormous blister-plaster, does not raise them? Simply because there is some little error in the very accurate computations which give all the regulations of tidal waters to lunar influences.

Barlow, one of the mathematical master-spirits of the age, was bold enough once to doubt this vast power of suction on the part of the ruler of the night; and there were certain wiseacres who, as in the case of Galileo, thought it very religiously dangerous indeed, to attempt to interfere with her privileges.

But, in fact, the phenomenon of the tides is just as easy of explanation by the motion of the earth as it is by the moon's presumed

drinking propensities, and, as she is a lady, let us hope she has been belied. The motion of the earth would not affect such narrow bodies of water as the Canadian lakes, but the moon's power of attraction would, if it existed to the extent supposed, be under the necessity of doing it, unless she prefers salt to fresh liquors.

One may venture, now-a-days, to express such a doubt, particularly as Madam Moon is a Pagan deity.

The great lakes are, however, very extraordinary in their way. Let us recollect what I have seen and thought of them.

We will commence with Lake Superior, which is 400 miles in length, 100 miles wide, and 900 feet deep, where it has been sounded. It contains 32,000 square miles of water, and it is 628 feet above the level of the sea.

Lake Michigan is 220 miles long, 60 miles wide, and 1,000 deep, as far as it has been sounded; contains 22,400 square miles, and is 584 feet above tide-water; but it is, in

fact, only a large bay of Lake Huron, the grand lake, which is 240 miles long, without it averaging 86 miles in width, also averaging 1,000 feet deep, as far as soundings have been tried, contains 20,400 square miles, and is also about 584 feet above the tidal waters.

Off Saginaw Bay, in this lake, leads have been sunk 1,800 feet, or 1,200 feet below the level of the Atlantic, without finding bottom.

Green Bay, an arm of Michigan, is in itself 106 miles long, 20 miles wide, and contains 2,000 square miles.

Lake St. Clair, 6 feet above Lake Erie, follows Lake Huron; but it is a mere enlargement of the St. Lawrence, of immense size, however, and shallow: it is 20 miles long, 14 wide, 20 feet deep, and contains 360 square miles.

Then comes Lake Erie, the Stormy Lake, which is 240 miles long, 40 miles wide, 408 feet in its deepest part, and contains 9,600 square miles. Lake Erie is 565 feet above

tide-water. Its average depth is 85 feet only.

Lake Ontario, the Beautiful Lake, is 180 miles long, 45 miles wide, 500 feet average depth, where sounded successfully, but said to be fathomless in some places, and contains 6,300 square miles. It is 232 feet above the tide of the St. Lawrence.

The Canadian lakes have been computed to contain 1,700 cubic miles of water, or more than half the fresh water on the globe, covering a space of about 93,000 square miles. They extend from west to east over nearly 15 degrees and a half of longitude, with a difference of latitude of about eight and a half degrees, draining a country of not less surface than 400,000 square miles.

The greatest difference is observable between the waters of all these lakes, arising from soil, depth, and shores. Ontario is pure and blue, Erie pure and green, the southern part of Michigan nothing particular. The northern part of Michigan and all Huron are clear, transparent, and full of carbonic

gas, so that its water sparkles. But the extraordinary transparency of the waters of all these lakes is very surprising. Those of Huron transmit the rays of light to a great depth, and consequently, having no preponderating solid matters in suspension, an equalization of heat occurs. Dr. Drake ascertained that, at the surface in summer, and at two hundred feet below it, the temperature of the water was 56°.

One of the most curious things on the shallow parts of Huron is to sail or row over the submarine or sublacune mountains, and to feel giddy from fancy, for it is like being in a balloon, so pure and tintless is the water. It is, like Dolland's best telescopes, achromatic.

The lakes are subject in the latter portion of summer to a phenomenon, which long puzzled the settlers; their surface near the shores of bays and inlets are covered by a bright yellow dust, which passed until lately for sulphur, but is now known to be the farina of the pine forests. The atmosphere is so

impregnated with it at these seasons, that water-barrels, and vessels holding water in the open air, are covered with a thick scum of bright yellow powder.

A curious oily substance also pervades the waters in autumn, which agglutinates the sand blown over it by the winds, and floats it about in patches. I have never been able to discover the cause of this; perhaps, it is petroleum, or the sand is magnetic iron. Singular currents and differently coloured streams also appear, as on the ocean; but, as all the lakes have a fall, no weed gathers, except in the stagnant bays.

The bottom of Ontario is unquestionably salt, and no wonder that it should be so, for all the Canadian lakes were once a sea, and the geological formation of the bed of Ontario is the saliferous rock.

I have often enjoyed on Ontario's shores, where I have usually resided, the grand spectacle which takes place after intense frost. The early morning then exhibits columns of white vapour, like millions of Geysers spout-

ing up to the sky, curling, twisting, shooting upwards, gracefully forming spirals and pyramids, amid the dark ground of the sombre heavens, and occasionally giving a peep of little lanes of the dark waters, all else being shrouded in dense mist.

People at home are very apt to despise lakes, perhaps from the usual insipidity of lake poetry, and to imagine that they can exhibit nothing but very placid and tranquil scenery. Lake Erie, the shallowest of the great Canadian freshwater seas, very soon convinces a traveller to the contrary; for it is the most turbulent and the most troublesome sea I ever embarked upon — a region of vexed waters, to which the Bermoothes of Shakespeare is a trifle; for that is bad enough, but not half so treacherous and so thunderstormy as Erie.

Huron is an ocean, when in its might; its waves and swells rival those of the Atlantic; and the beautiful Ontario, like many a lovely dame, is not always in a good temper. I once crossed this lake from Niagara to To-

ronto late in November, in the Great Britain, a steamer capable of holding a thousand men with ease, and during this voyage of thirty-six miles we often wished ourselves anywhere else: the engine, at least one of them, got deranged; the sea was running mountains high; the cargo on deck was washed overboard; gingerbread-work, as the sailors call the ornamental parts of a vessel, went to smash; and, if the remaining engine had failed in getting us under the shelter of the windward shore, it would have been pretty much with us as it was with the poor fellow who went down into one of the deepest shafts of a Swedish mine.

A curious traveller, one of "the inquisitive class," must needs see how the miners descended into these awful depths. He was put into a large bucket, attached to the huge rope, with a guide, and gradually lowered down. When he had got some hundred fathoms or so, he began to feel queer, and look down, down, down. Nothing could he see but darkness visible. He questioned his guide as to how

far they were from the bottom, cautiously and nervously. “Oh,” said the Swede, “about a mile.” “A mile!” replied the Cockney: “shall we ever get there?”—“I don’t know,” said the guide. “Why, does any accident ever happen?”—“Yes, often.”—“How long ago was the last accident, and what was it?”—“Last week, one of our women went down, and when she had got just where we are now, the rope broke.”—“Oh, Heaven!” ejaculated the inquisitive traveller, “what happened to her?” The Swede, who did not speak very good English, put the palm of his right hand over that of his left, lifted the upper hand, slapped them together with a clap, and said, most phlegmatically—“Flat as a pankakka.”

I once crossed Ontario, in the same direction as that just mentioned, in another steamer, when the beautiful Ontario was in a towering passion. We had a poor fellow in the cabin, who had been a Roman Catholic priest, but who had changed his form of faith. The whole vessel was in commotion; it was impossible for the best sea-legs to hold on; so

two or three who were not subject to seasickness got into the cabin, or saloon, as it is called, and grasped any thing in the way. The long dinner-table, at which fifty people could sit down, gave a lee-lurch, and jammed our poor *religioner*, as Southey so affectingly calls ministers of the word, into a corner, where chairs innumerable were soon piled over him. He abandoned himself to despair; and long and loud were his confessions. On the first lull, we extricated him, and put him into a birth. Every now and then, he would call for the steward, the mate, the captain, the waiters, all in vain, all were busy. At last his cries brought down the good-natured captain. He asked if we were in danger. "Not entirely," was the reply. "What is it does it, captain?"—"Oh, said the skipper, gruffly enough, "we are in the trough of the sea, and something has happened to the engine." "The trough of the *say*?"—my friend was an Irishman—"the trough of the say? is it that does it, captain?" But the captain was gone.

During the whole storm and the remainder

of the voyage, the poor ex-priest asked every body that passed his refuge if we were out of the trough of the say. "I know," said he, "it is the trough of the say does it." No cooking could be performed, and we should have gone dinnerless and supperless to bed, if we had not, by force of steam, got into the mouth of the Niagara river. All became then comparatively tranquil; she moored, and the old Niagara, for that was her name, became steady and at rest. Soon the cooks, stewards, and waiters, were at work, and dinner, tea, and supper, in one meal, gladdened our hearts. The greatest eater, the greatest drinker, and the most confident of us all, was our old friend and companion of the voyage, "the Trough of the Say," as he was ever after called.

Such is tranquil Ontario. I remember a man-of-war, called the Bullfrog, being once very nearly lost in the voyage I have been describing; and never a November passes without several schooners being lost or wrecked upon Lakes Huron, Erie, and On-

tario ; whilst the largest American steamers on Erie sometimes suffer the same fate. Whenever Superior is much navigated, it will be worse, as the seasons are shorter and more severe there, and the shores iron-bound and mountainous.

Through the Welland Canal there is now a continuous navigation of those lakes for 844 miles ; and the St. Lawrence Canal being completed, and the La Chine Locks enlarged at Montreal, there will be a continuous line of shipping from London to the extremity of Lake Superior, embracing an inland voyage on fresh water of upwards of two thousand miles. Very little is required to accomplish an end so desirable.

It has been estimated by the Topographical Board of Washington, that during 1843 the value of the capital of the United States afloat on the four lakes was sixty-five millions of dollars, or about sixteen millions, two hundred thousand pounds sterling ; and this did not of course include the British Canadian capital, an idea of which may be formed from

the confident assertion that the Lakes have a greater tonnage entering the Canadian ports than that of the whole commerce of Britain with her North American colonies. This is, however, *un peu fort*. It is now not at all uncommon to see three-masted vessels on Lake Ontario; and one alone, in November last, brought to Kingston a freight of flour which before would have required three of the ordinary schooners to carry, namely, 1500 barrels.

A vessel is also now at Toronto, which is going to try the experiment of sailing from that port to the West Indies and back again; and, as she has been properly constructed to pass the canals, there is no doubt of her success.

Some idea of the immense exertions made by the government to render the Welland Canal available may be formed by the size of the locks at Port Dalhousie, which is the entrance on Lake Ontario. Two of the largest class, in masonry, and of the best quality, have been constructed: they are 200 feet long by 45 wide; the lift of the upper lock

is 11, and of the lower, 12, which varies with the level of Lake Ontario, the mitre sill being 12 feet below its ordinary surface. Steamers of the largest class can therefore go to the thriving village of St. Catherine's, in the midst of the granary of Canada.

The La Chine Canal must be enlarged for ship navigation more effectually than it has been. I subjoin a list of colonial shipping for 1844 from Simmonds' "Colonial Magazine."

It will be seen, from the foregoing statement, that the tonnage of the vessels belonging to our colonies is about equal to that of the whole of the French mercantile marine, which in 1841 consisted of 592,266 tons—1842, 589,517—1843, 599,707.

The tonnage of the three principal ports of Great Britain in 1844 was:—

London	.	.	.	598,552
Liverpool	.	.	.	307,852
Newcastle	.	.	.	259,571
Total				<hr/> 1,165,975

On Lake Erie, the Canadians have a splendid steamer, the London, Captain Van Allen, and another still larger is building at Chipewewa, which is partly owned by government, and so constructed as to carry the mail and to become fitted speedily for warlike purposes.

Lake Ontario swarms with splendid British steam-vessels; but on Lake Huron there is only at present one, called the Waterloo, in the employment of the Canada Company, which runs from Goderich to the new settlements of Owen's Sound.

Propellers now go all the way to St. Jo-

seph's, at the western extremity of Lake Huron; and the trade on this lake and on Michigan is becoming absolutely astonishing. Last year, a return of American and foreign vessels at Chicago, from the commencement of navigation on the 1st of April to the 1st of November only, shows that there arrived 151 steamers, 80 propellers, 10 brigs, and 142 schooners, making a total of 1,078 lake-going vessels, and a like number of departures, not including numerous small craft, engaged in the carrying of wood, staves, ashes, &c., and yet, such was the glut of wheat, that at the latter date 300,000 bushels remained unshipped.

Upwards of a million of money will be expended by the Canadian Government in protecting and securing the transit trade of the lakes; and the Canadians have literally gone ahead of Brother Jonathan, for they have made a ship-canal round the Falls of Niagara, whilst "the most enterprising people on the face of the earth," who are so much in advance of us according to the ideas of some writers, have been dreaming about it.—So much for

the welfare of the earth being co-equal with democratic institutions, *à la mode Française !*

The American government up to 1844 had spent only 2,100,000 dollars on the same objects, or about half a million sterling, according to the statement of Mr. Whittlesey of Ohio. But that government is actually stirring in another matter, which is of immense future importance, although it appears trivial at this moment, and that is the opening up of Lake Superior, where a new world offers itself.

They have projected a ship-canal round, or rather by the side of the rapids of St. Marie. The length of this canal is said to be only, in actual cutting, three-quarters of a mile, and the whole expense necessary not more than 230,000 dollars, or about £55,000 sterling.

The British government should look in time to this; it owns the other side of the Sault St. Marie, and the Superior country is so rich in timber and minerals that it is called the Denmark of America, whilst a direct access

hereafter to the Oregon territory and the Pacific must be opened through the vast chain of lakes towards the Rocky Mountains by way of Selkirk Colony, on the Red River.

The lakes of Canada have not engaged that attention at home which they ought to have had; and there is much interesting information about them which is a dead letter in England.

Their rise and fall is a subject of great interest. The great sinking of the levels of late years, which has become so visible and so injurious to commerce, deserves the most attentive investigation. The American writers attribute it to various causes, and there are as many theories about it as there are upon all hidden mysteries. Evaporation and condensation, woods and glaciers, have all been brought into play.

If the lakes are supplied by their own rivers, and by the drainage streams of the surrounding forests, and all this is again and again returned into them from the clouds, whence arises the sudden elevation or the

sudden depression of such enormous bodies of water, which have no tides?

The Pacific and the Atlantic cannot be the cause; we must seek it elsewhere. To the westward of Huron, on the borders of Superior, the land is rocky and elevated; but it attains only enormous altitudes at such a distance on the rocky Andean chain as to render it improbable that those mountains exert immediate influences on the lakes. The Atlantic also is too far distant, and very elevated land intervenes to intercept the rising vapours. On the north, high lands also exist; and the snows scarcely account for it, as the whole of North America near these inland seas is alike covered every year in winter.

The north-east and the south-west winds are the prevalent ones, and a slight inspection of the maps will suffice to show that those compass bearings are the lines which the lakes and valleys of Northern America assume.

In 1845, the lakes began suddenly to diminish, and to such a degree was this con-

tinued from June to December, when the hard frosts begin, that, at the commencement of the latter month, Lake Ontario, at Kingston, was three feet below its customary level, and consequently, in the country places, many wells and streams dried up, and there was during the autumn distress for water both for cattle and man, although the rains were frequent and very heavy.

Whence, then, do the lakes receive that enormous supply which will restore them to their usual flow?—or are they permanently diminishing? I am inclined to believe that the latter is the case, as cultivation and the clearing of the forest proceed; for I have observed within fifteen years the total drying up of streamlets by the removal of the forest, and these streamlets had evidently once been rivulets and even rivers of some size, as their banks, cut through alluvial soils, plainly indicated.

The lakes also exhibit on their borders, particularly Ontario, as Lyell describes from the information of the late Mr. Roy, who had

carefully investigated the subject, very visible remains of many terraces which had consecutively been their boundaries.

It is evident to observers who have recorded facts respecting the lakes, that but a small amount of vapour water is deposited by north-easterly winds from the Gulf of St. Lawrence, the great estuary of that river, of which the lakes are only enlargements, as the wind from that region carries the cloud-masses from the lakes themselves direct to the valley of the Mississippi. For it meets with no obstacle from high lands on the western littorale, which is low. A north-east gale continues usually from three to six days, and generally without much rain; but all the other winds from south to westerly afford a plentiful supply of moisture. Thus a shift of wind from north-east to north and to north-west perhaps brings back the vapour of the great valley of the gulf, reduced in temperature by the chilly air of the north and west. If then an easterly gale continues for an unusual time, the basin of the Canadian lakes is robbed of much of its

water, which passes to the rivers of the west, and is lost in the gulf of Mexico, or in the forest lakes of the wild West.

Perhaps, therefore, whenever a cycle occurs in which north-east winds prevail during a year or a series of years, the lakes lose their level, for, their direction being north-east and south-west, such is the usual current of the air; and therefore either north-east or south-westerly winds are the usual ones which pass over their surface.

The parts of the great inland navigation which suffer most in these periodical depressions are the St. Clair River and the shallow parts of those extensions of the St. Lawrence called Lakes St. Francis and St. Peter, which in the course of time will cause, and indeed in the latter already do cause, some trouble and some anxiety.

The north winds, keen and cold, do not deposit much in the valley of the lakes, whose southern borders are usually too low also to prevent the passage of rain-bearing clouds.

From that portion of the dividing ridge between the valleys of the St. Lawrence and Mississippi, only seven miles from Lake Erie, says an American writer, there is to Fort Wayne, at the head of the Maumee river, one hundred miles from the same lake, a gradual subsidence of the land from 700 to less than 200 feet.

From Fort Wayne westward this dividing ridge rises only one hundred and fifty feet, and then gradually subsides to the neighbourhood of the south-west of Lake Michigan, where it is but some twenty feet above the level of that water.

The basin of the Mississippi, including its great tributary streams, receives therefore a very great portion of the falling vapour, from all the winds blowing from north to north-east.

The same reasoner agrees with the views which I have expressed respecting the probability of the supply to raise the level, which must be the great feeder derived from the south and south-westward invariably rainy

winds, when of long continuance, in the basin of the St. Lawrence, and generated by the gulf stream in its gyration through the Mexican Bay, being heaped up from the trade wind which causes the oceanic current, and forces its heated atmosphere north and north-east, by the rebound which it takes from the vast Cordilleras of Anahuac and Panama ; thus depositing its cooling showers on the chain of the fresh water seas of Canada, condensed as they are by the natural air-currents from the icy regions of the western Andes of Oregon, and the cold breezes from the still more gelid countries of the north-west.

The American topographical engineers, as well as our own civil engineers and savans, have accurately measured the heights and levels of the lakes, which I have already given ; but one very curious fact remains to be noticed, and will prove that it is by no means a visionary idea that, from the great island of Cuba, which must be an English outpost, if much further annexation occurs, voyages will be made to bring the produce

of the West Indies and Spanish America into the heart of the United States and Canada by the Mississippi and the rivers flowing into it, and by the great lakes ; so that a vessel, loading at Cuba, might perform a circuit inland for many thousand miles, and return to her port *via* Quebec.

From the Gulf of Mexico to the lowest summits of the ridge separating the basin of the Mississippi from that of the St. Lawrence or great lakes, the rise does not exceed six hundred feet, and the graduation of the land has an average of not more than six inches to a mile in an almost continuous inclined plane of six thousand miles. The Americans have not lost sight of this natural assistance to form a communication between the lakes and the Mississippi.

My attention has been drawn to the subsidence of the waters of the lakes of Canada by the unusual lowness of Ontario, on the banks of which I lived last year, and by reading the statement of the American writer above quoted, as well as by the fact that in the Travels

of Carver, one of the first English navigators on these mediterraneans, who states that a small ship of forty tons, in sailing from the head of Lake Michigan to Detroit, was unable to pass over the St. Clair flats for want of water, and that the usual way of passing them eighty years ago was in small boats. What a useful thing it would have been, if any scientific navigators or resident observers had registered the rise and fall of the lakes in the years since Upper Canada came into our possession ! An old naval officer told me that it was really periodical ; and it occurred usually, that the greatest depression and elevation had intervals of seven years. Lake Erie is evidently becoming more shallow constantly, but not to any great or alarming degree ; and shoals form, even in the splendid roadstead of Kingston, within the memory of young inhabitants. An American revenue vessel, pierced for, I believe, twenty-four guns, and carrying an enormous Paixhan, grounded in the autumn of last year on a shoal in that harbour, which was not known to the oldest pilot.

By the bye, talking of this vessel, which is a steamer built of iron, and fitted with masts and sails, the same as any other sea-going vessel, can it be requisite, in order to protect a commerce which she cannot control beyond the line drawn through the centre of the lakes, to have such a vessel for revenue purposes? or is she not a regular man-of-war, ready to throw her shells into Kingston, if ever it should be required? At least, such is the opinion which the good folks of that town entertained when they saw the beautiful craft enter their harbour.

The worst, however, of these iron boats is that two can play at shelling and long shots; and gunnery-practice is now brought to such perfection, that an iron steamer might very possibly soon get the worst of it from a heavy battery on the level of the sea; for a single accident to the machinery, protected as it is in that vessel, would, if there was no wind, put her entirely at the mercy of the gunners. The old wooden walls, after all, are better adapted to attack a fortress, as

they can stand a good deal of hammering from both shot and shells.

But to revert to matters more germane to the lakes.

Volney, the first expounder of the system of the warm wind of the south supplying the great lakes, has received ample corroboration of his data from observation. The fact that the deflection of the great trade-wind from the west to a northern direction by the Mexican Andes Popocatepetl, Istaccihuetl Naucampatepetl, &c., whose snowy summits have a frigid atmosphere of their own, is proved by daily experience.

Whenever southerly winds prevail—and, in the cycle of the gyration of atmospherical currents, this is certain, and will be reduced to calculation—the great lakes are filled to the edge; and whenever northern and north-easterly winds take their appointed course, then these mediterraneans sink, and the valley of the Mississippi is filled to overflowing.

But the most curious facts are, that the different lakes exhibit different phenomena.

The Board of Public Works of Ohio states that, in 1837-38, the quantity of water descending from the atmosphere did not exceed one-third of that which was the minimum quantity of several preceding years.

Ontario, from the reports of professional persons, has varied not less than eight feet, and Erie about five. Huron and Superior being comparatively unknown, no data are afforded to judge from; but what vast atmospheric agencies must be at work when such wonderful results in the smaller lakes have been made evident!

People who live at the Niagara Falls, and I agree with them in observations extending over a period since 1826, believe that these Falls have receded considerably; and, although I do not enter into the mathematical analysis of modern geologists respecting them, as to their constant retrocession, believing that earthquake split open the present channel, yet I have no doubt that the level of Lake Erie is considerably affected by the diminution of the yielding shaly rocks of their foundation. Earthquake, and not retrocession,

appears to me, who have had the singular advantage, as a European, of very long residence, to have been the cause of that great chasm which now forms the bed of the Niagara, from the Table Rock to Queenston, in short, a rending or separating of the rocks rather than a wearing; and this is corroborated by the many vestiges of great cataracts which now exist near the Short Hills, the highest summit of the Niagara frontier, between Lakes Erie and Ontario, as well as by the great natural ravine of St. David's. But this is a subject too deep for our present purpose, and so we shall continue to treat of the Great Lakes in another point of view.

Chemically considered, these lakes possess peculiar properties, according to their boundaries. Superior is too little known to speak of with certainty—Huron not much better—but Erie, and particularly Ontario, have been well investigated. The waters of these are pure, and impregnated chiefly with aluminous and calcareous matter, giving to the St. Lawrence river a fresh and admirable element and aliment.

The St. Lawrence is of a fine cerulean hue, but, like its parent waters of Erie and Ontario, rapidly deposits lime and alumine, so that the boilers of steam-vessels, and even teakettles, soon become furred and incrustated. The specific gravity of the St. Lawrence water above Montreal is about 1·00038, at the temperature of 66°, the air being then 82° of Fahrenheit. It contains the chlorides, sulphates, and carbonates, whose bases are lime and magnesia, particularly and largely those of lime, which accounts for the rapid depositions when the water is heated.

A very accurate analysis gives, at Montreal, in July, atmospheric air in solution or admixture 446 per cent; for a quart of this water, 57 inches cubic measure, evaporated to dryness, left 2·87 solid residue.

	Grains.
Sulphate of magnesia	0·62
Chloride of calcium .	0·38
Carbonate of magnesia	0·27
Carbonate of lime .	1·29
Silica	0·31
	<hr/>
	2·87

The waters of the Ottawa, flowing through an unexplored country, are of a brown or dark colour. Their specific gravity is only (compared to distilled water) as 1·0024 at 66°, the temperature of the air in July being 82°.

The 57 cubic inches of this water gave

0·99 sulphate of magnesia.
 0·60 chloride of lime.
 1·07 carbonate of magnesia.
 0·17 carbonate of lime.
 0·31 silica.

2·87

The difference of the colours of these waters is so great, that a perfect line of distinction is drawn where they cross each other; and there can be no doubt that it is caused by the reflection of the rays of light from the impregnation of different saline quantities.

Thus as, in the old world, the waters of the Shannon are brown, and Ireland, speaking generally, as Kohl says, is a “brown” country;¹ so, in Upper Canada, St. Lawrence

¹ Canada is a blue country; for, a very short distance from the observer, the atmosphere tinges everything blue; and the waters are chiefly of that colour, the sky intensely so.

and the lakes are blue and green; and in Lower Canada, St. Lawrence and the Ottawa are brown of various shades, a very slight alteration of the chemical components reflecting rays of colour as forcibly and perceptibly as, in like manner, a very slight change of component parts develops sugar and sawdust. Nature, in short, is very simple in all her operations.

Before we proceed to the lower extremity of these wonderful sheets of water again, let us just for a moment glance at what is about to be achieved upon their surfaces, and place the Sault of St. Marie or St. Mary's Rapids, which separate Superior from Huron, before an Englishman's eyes. There at present nothing is talked of but copper mines and silver or argentiferous copper ores.

The Falls of St. Mary are only rapids of no very formidable character, the exit of Lake Superior into Lake Huron. Fifteen miles from the end of the Great Lake, as Superior is called, are the American village of St. Mary and the British one of the same

name, on the opposite bank of the River St. Mary.

The Americans have so far strengthened their position, that there is a sort of fort, called Fort Brady, with two companies of regulars; and in and about the village are scattered a thousand people of every possible colour and origin, a great portion being, of course, half-breeds and Indians. The American Fur Company has also a post at this place, one of the very few remaining; for the fur trade in these regions is rapidly declining by the extirpation of the animals which sustained it.

The American government have projected a ship canal to avoid these rapids; and, if that is completed, a vast trade will soon grow up.

About a mile above the village is the landing-place from Lake Superior, at the head of the rapids; there the strait is broad and deep; but, until steamers are built, sailing vessels suffer the disadvantage of being moveable out of the harbour by an east wind only, and this wind does not blow there oftener than once a

month. It is probable that a proper harbour will be constructed at the foot of the lake, fifteen miles above.

These rapids have derived their French name *Sault* from their rushing and leaping motion; but they are very insignificant when compared to the Longue Sault on the St. Lawrence, as the inhabitants cross them in canoes.

I cannot describe them more minutely than Mrs. Jameson has done in her "Summer Rambles." She crossed them, and must have experienced some trepidation, for it requires a skilful voyageur to steer the canoe; and it is surprising with what dexterity the Indian will shoot down them as swiftly as the water can carry his fragile vessel. The Indians, however, consider such feats much in the same light as a person fond of boating would think of pulling a pair of oars, or sculling himself across the current of a rivulet. I was once subjected to a rather awkward exemplification of this fact. Being on a hurried journey, and expecting to be frozen in, as it is

called, before I could terminate it, I hired an Indian and his little canoe, just big enough to hold us both, and pushed through by-ways in the forest streams and portages. We were paddling merrily along a pretty fair stream, which ran fast, but appeared to reach many miles ahead of us; when, all of a sudden, my guide said, "Sit fast." I perceived that the water was moving much more rapidly than it had hitherto done, and that the Indian had wedged himself in the stern, and was steering only with the paddle. We swept along merrily for a mile, till "The White Horses," as the breakers are called, began to bob their heads and manes. "Hold fast!" ejaculated the Red Man. I laid hold of both edges of the canoe, firm as a rock, and in a moment the horrid sound of bursting, bubbling, rushing waters was in mine ears; foam and spray shut out every thing; and away we went, down, down, down, on, on, on, as swift as thought, until, all of a sudden, the little buoyant piece of birch-bark floated like a swan upon the bosom of the tranquil waters,

a mile beyond the Fall, for such indeed it might be called, the absolute difference of level having been twelve feet.

When at ease again, I looked at the imperturbable savage and said, "What made you take the Fall? was not the *détour* passable?"—"Yes, suppose it was! Fall better!"—"But is it very dangerous?"—Yes, suppose, sometime!"—"Any canoes ever lost there?"—"Yes, sometime; one two, tree days ago, there!" pointing to a large rock in the middle of the narrowest part above our heads.—"Did you come down there?"—"Yes, suppose, did!"

Then, thought I to myself, I shall not trust my body to your guidance in future without knowing something of the route beforehand; but I afterwards got accustomed to these taciturn sons of the forest.

The Falls of St. Marie are celebrated as a fishing place; and the white fish caught there are reckoned superior to those taken in any other part of Lake Huron. The fishery is picturesque enough, and is carried on in

canoes, manned usually by two Indians or half-breeds, who paddle up the rapids as far as practicable. The one in the bow has a scoop-net, which he dips, as soon as one of these glittering fish is observed, and lands him into the canoe. Incredible numbers of them are taken in this simple manner; but it requires the canoemanship and the eye of an Indian.

The French still show their national characteristics in this remote place. They first settled here before the year 1721, as Charlevoix states; and, in 1762, Henry, a trader on Lake Huron, found them established in a stockaded fort, under an officer of the French army. The Jesuits visited Lake Superior as early as 1600; and in 1634 they had a rude chapel, the first log hut built so far from civilization, in this wilderness. At present, the population are French, Upper Canadians, English, Scotch, Yankees, Indians, half-breeds.

The climate is healthy, very cold in winter, with a short but very warm summer, and always a pure air. Here the *Aurora Borealis*

is seen in its utmost glory. In summer there is scarcely any night; for the twilight lasts until eleven o'clock, and the tokens of the returning sun are visible two hours afterwards.

The extremes of civilized and savage life meet at St. Mary's; for here live the educated European or American, and the pure heathen Red Man; here steamboats and the birch canoe float side by side; and here all-powerful Commerce is already recommencing a deadly rivalry between the Briton and the American, not for furs and peltry, as in days gone by, but for copper and for metals; and here a new world is about to be opened, and that too very speedily.

Here are Indian agents and missionaries, with schools, both the English and the United States' government considering the entrance to the Red Man's country, whose gates are so narrow and still closed up, to be of very great importance, both in a commercial and a political point of view; but it is notorious that, after the French Canadians,

the Red Man prefers his Great Mother beyond the Great Lake and her subjects to the President and the people, who are rather too near neighbours to be pleasant, and who have somewhat unceremoniously considered the natives of the soil as so many obstacles to their aggrandizement.

I shall end this sketch of the lakes, by a few observations upon the magnetic phenomena regarding them, and respecting the variation of the compass.

Fort Erie, near the eastern termination of Lake Erie, and close to the Niagara river, presents the line of no variation; whilst at the town of Niagara, on the south-west end of Lake Ontario, not more than thirty-six miles from Fort Erie, the variation in 1832 was $1^{\circ} 20'$ east.

The line of no variation is marked distinctly on the best maps of Canada, by the division line between the townships of Stamford and Niagara, seven miles north of Niagara.

At Toronto in $43^{\circ} 39'$ north latitude, and $78^{\circ} 4'$ west longitude, twenty-four miles

north-east of Niagara, the variation in 1832 was more than 2° easterly.

The shore of Lake Huron at Nottawasaga Bay, forty miles north-west of Toronto, is again the line of no variation.

Thus a magnetic meridian lies between Fort Erie and Nottawassaga.

A magnetic observatory is established by the Board of Ordnance at Toronto, near the University, and placed in charge of two young officers of artillery, which says a good deal for the scientific acquirements of that corps. I shall perhaps hereafter advert to this subject more at large, as the volcanic rocks have much to do with the needle in Canada West.

CHAPTER X.

Return to Toronto, after a flight to Lake Superior—Loons natural Diving Bells—Birds caught with hooks at the bottom of Niagara River—Ice-jam—Affecting story—Trust well placed—Fast Steamer—Trip to Hamilton—Kékéquawkonnaby, alias Peter Jones—John Bull and the Ojibbeways—Port Credit, Oakville, Bronte, Wellington Square—Burlington Bay and Canal—Hamilton—Ancaster—Immense expenditure on Public Works—Value of the Union of Canada with Britain, not likely to lead to a Repeal—Mackenzie's fate—Family compact—Church and Kirk—Free Church and High Church—The vital principle—The University—President Polk, Oregon, and Canada.

After a ramble in this very desultory manner, which the reader has, no doubt, now become accustomed to, I returned to Toronto, having

first observed that the harvest looked very ill on the Niagara frontier; that the peaches had entirely failed, and that the grass was destroyed by a long drought; that the Indian corn was sickly, and the potatoes very bad. Cherries alone seemed plentiful; the caterpillars had destroyed the apples—nay, to such an extent had these insects ravaged the whole province, that many fruit-trees had few or no leaves upon them. A remarkable frost on the 30th of May had also passed over all Upper Canada, and had so injured the woods and orchards, that, in July, the trees in exposed places, instead of being in full vigour, were crisped, brown, and blasted, and getting a renewal of foliage very slowly.

My return to Toronto was caused by duty, as well as by a desire to visit as many of the districts as I possibly could, in order to observe the progress they had made since 1837, as well as to employ the mind actively, to prevent the re-action which threatened to assail it from the occurrence of a severe dispensation.

I heard a very curious fact in natural history, whilst at Niagara, in company with a medical friend, who took much interest in such matters.

I had often remarked, when in the habit of shooting, the very great length of time that the loon, or northern diver, (*colymbus glacialis*,) remained under water after being fired at, and fancied he must be a living diving-bell, endued with some peculiar functions which enabled him to obtain a supply of air at great depth ; but I was not prepared for the circumstance that the fishermen actually catch them on the hooks of their deepest lines in the Niagara river, when fishing at the bottom for salmon-trout, &c. Such is, however, the fact.

An affecting incident at Queenston, whilst we were waiting for the Transit to take us to Toronto, must be related. I have mentioned that, in the spring of 1845, an ice-jam, at it is called here, occurred, which suddenly raised the level of the Niagara between thirty and forty feet above its ordinary floods, and over-

set or beat down, by the grinding of mountain masses of ice, all the wharfs and buildings on the adjacent banks.

The barrack of the Royal Canadian Rifles at Queenston was thus assailed in the darkest hours of the night, and the soldiers had barely time to escape, before the strong stone building they inhabited was crushed. The next to it, but on higher ground, more than thirty feet above the natural level of the river, was a neat wooden cottage, inhabited by a very aged man and his helpless imbecile wife, equally aged with himself. This man, formerly a soldier, was a cabinet-maker, and amused his declining years by forming very ingenious articles in his line of business; his house was a model of curious nick-nackeries, and thus he picked up just barely enough in the retrograding village to keep the wolf from the door; whilst the soldiers helped him out, by sparing from their messes occasionally a little nourishing food.

That night, the dreadful darkness, the elemental warnings, the soul-sickening rush of

the river, the groaning and grinding of the ice, piling itself, layer after layer, upon the banks of the river, assailed the old man with horrors, to which all his ancient campaigns had afforded no parallel.

He heard the irresistible enemy, slowly, deliberately, and determinedly advancing to bury his house in its cold embrace. He hurried the unmindful sharer of his destiny from her bed, gathered the most precious of his household goods, and knew not how or where to fly. Loudly and oft the angry spirit of the water shrieked : Niagara was mounting the hill.

The soldiers, perceiving his imminent peril, ventured down the bank, and shouted to him to fly to them. He moved not ; they entreated him, and, knowing his great age and infirmity, and the utter imbecility of the poor old dame, insisted upon taking them out.

But the man withstood them. He looked abroad, and the glimmering night showed him nothing but ruin around.

“ I put my trust in Him who never fails,”

said the veteran. "He will not suffer me to perish."

The soldiers, awed by the wreck of nature, rushed forward, and took the ancient pair out by strength of arms; and, no sooner had they done so, than the waters, which had been so eager for their prey, reached the lower floor, and a large wooden building near them was toppled over by waves of solid ice. Much of the poor man's ingeniously-wrought furniture was injured; but, although the neighbouring buildings were crushed, cracked, rent, and turned over, the old man's habitation was spared, and he still dwells there, waiting in the sunshine for his appointed time, with the same faith as he displayed in the utter darkness of the storm.

He had built his cottage on land belonging to the Crown; and, in consequence of an act recently passed, he, with many others who had thus taken possession, had been ordered to remove. But his affecting history had gained him friends, and he has now permission to dwell thereon, until he shall be sum-

moned away by another and a higher authority, by that Power in whom he has his being, and in whom he put his trust.

We landed once more at Toronto, at present "The City" of Upper Canada, on the 7th of July, and left it again on the 8th, in the fine and very fast steamer Eclipse for Hamilton, in the Gore district, at three o'clock, p.m. The day was fine ; and thus we saw to advantage the whole shore of Ontario, from Toronto to Burlington.

Our first stopping place was Port Credit, a place remarkable for the settlement near it of an Indian tribe, to which the half-bred Peter Jones, or Kékéquawkonnaby, as he is called, belongs.

This man, or, rather, this somewhat remarkable person, and, I think, missionary teacher of the Wesleyan Methodists, attained a share of notoriety in England a few years ago, by marrying a young English woman of respectable connections, and passed with most people in wonder-loving London as a great Indian Chief, and a remarkable instance of the de-

velopment of the Indian mind. He was, or rather is, for I believe he is living, a clever fellow, and had taken some pains with himself; but, like most of the Canadian lions in London, does not pass in his own country for any thing more than what he is known to be there, and that is, like the village he lives near, of credit enough. It answers certain purposes every now and then to send people to represent particular interests to England; and, in nearly all these cases, John Bull receives them with open arms, and, with his national gullibility, is often apt to overrate them.

The O-jibbeway or Chippewa Indians, so lately in vogue, were a pleasant instance, and we could name other more important personages who have made dukes, and lords, and knights of the shire, esquires of the body, and simple citizens pay pretty dearly for having confided their consciences or their purse-strings to their keeping.

Beware, dear brother John Bull, of those who announce their coming with flourishes of

trumpet, and who, when they arrive on your warm hearths, fill every newspaper with your banquetings, addresses, and talks, not to honour *you*, but to tell the Canadian public what extraordinary mistakes they have made in not having so readily, as you have done, found out their superexcellencies.

These are the men who sometimes, however, find a rotten rung in Fortune's ladder, and thus are suddenly hurled to the earth, but who, if they succeed and return safely, become the picked men of company, forget men's names, and, though you be called John, call you Peter.

The mouth of the little river Credit is called Port Credit, the port being made by the parallel piers run out into deep water on cribs, or frames of timber filled with stones, the usual mode of forming piers in Canada West. It is a small place, with some trade, but the Indians complain sadly that the mills and encroachments of the Whites have destroyed their salmon-fishery, which was their chief resource. Where do the Whites come

in contact with the Red without destroying their chief resource? Echo answers, Where?

Sixteen miles farther on we touched at Oakville, or Sixteen Mile Creek, where again the parallel piers were brought into use, to form a harbour. Oakville is a very pretty little village, exhibiting much industry.

Bronte, or Twelve Mile Creek, is the next village, very small indeed, with a pier, and then Port Milford, which is one mile from Wellington Square, a place of greater importance, with parallel piers, a steam-mill, and thriving settlement; near it is the residence of the celebrated Indian chief Brant, who so distinguished himself in the war of 1812. Here also is still living another chief, who bears the commission of major in the British army, and is still acknowledged as captain and leader of the Five Nations; his name is John Norton, or, more properly, Tey-on-in-ho, ka-ra-wen.

That which I wished particularly, however, to see, was now close to us, the Canal into Burlington Bay.

Burlington Bay is a little lake of itself, surrounded by high land in the richest portion of Canada, and completely enclosed by a bar of broad sand and alluvial matter, which runs across its entrance. In driving along this belt, you are much reminded of England: the oaks stand park-like wide asunder, and here, on tall blasted trees, you may frequently see the bald eagle sitting as if asleep, but really watching when he can rob the fish-hawk of the fruits of his piscatory toils.

The bald eagle is a cunning, bold, bad bird, and does not inspire one with the respect which his European congeners, the golden or the brown eagle, do. He is the vulture of North America rather than the king of birds. Why did Franklin,¹ or whoever else did the deed, make him the national emblem of power? He is decidedly a *mauvais sujet*.

The Canal of Burlington Bay is an arduous and very expensive undertaking. The open-

¹ I think, however, I have read that the philosophic printer gave him a very bad character.

ing from Lake Ontario was formerly liable to great changes and fluctuations, and the provincial work, originally undertaken to *fix* the entrance more permanently, was soon found inadequate to the rapid commercial undertakings of the country. Accordingly, a very large sum was granted by the Parliament for rendering it stable and increasing the width, which is now 180 feet, between substantial parallel piers.

There is a lighthouse at each end on the left side going in, but the work still requires a good deal of dredging, and the steamboat, although passing slowly and steadily, made a very great surge. In fact, it requires good steerage-way and a careful hand at the helm in rough weather.

The contractors made a railroad for five miles to the mountain, to fetch the stone for filling-in the piers.

The voyage across Burlington Bay is very pleasant and picturesque, the land being more broken, elevated, and diversified than in the lower portions of Canada West; and the Bur-

lington Heights, so important a position in the war of 1812, show to great advantage. Here is one of the few attempts at castle-building in Canada called Dundurn Castle, the residence of Sir Allan Macnab. It is beautifully situated, and, although not perhaps very suitable to a new country, it is a great ornament to the vicinity of Hamilton, embowered as it is in the natural forest. Near it, however, is a vast swamp, in which is Coot's Paradise, so named, it is said, from a gentleman, who was fond of duck-shooting, or perhaps from the coot or water-hen being there in bliss.

Hamilton is a thriving town, exhibiting the rapid progress which a good location, as the Americans call it, ensures. The other day it was in the forest, to-day it is advancing to a city. It has, however, one disadvantage, and that is the very great distance from its port, which puts both the traveller and the merchant to inconvenience, causing expense and delay. How they manage, of a dark night, on the wharf to thread the narrow passage

lined with fuel-wood for the steamboat I cannot tell ; but, in the open daylight of summer, I saw a vehicle overturned and sent into the mud below. There is barely room for the stage or omnibus ; and thus you must wait your turn amidst all the jostling, swearing, and contention, of cads, runners, agents, drivers, and porters ; a very pleasant situation for a female or an invalid, and expecting every moment to have the pole of some lumber-waggon driven through your body.

Private interest here, as well as in so many other new places and projects in Canada, has evidently been at work, and a city a mile or two from its harbour, without sufficient reason, has been the result. But that will change, and the city will come to the port, for it is extending rapidly. The distance now is one mile and a quarter.

After great delay and a sharp look-out for carpet-bags and leather trunks, we arrived at Young's Hotel, a very substantial stone building, on a large scale, where civility and comfort made up for delay. It was English.

As it was night before we got settled, although a very fine night, and knowing that I should start before "Charles's Wain was over the new chimney," I sallied forth, with a very obliging guide, who acted as representative of the commissariat department, to examine the town.

The streets are at present straggling, but, as in most Canadian new towns, laid out wide and at right angles. The main street is so wide that it would be quite impracticable to do as they do in Holland, namely, sit at the door and converse, not *sotto voce*, with your opposite neighbour. It is in fact more like a Mall than a street, and should be planted with a double row of trees, for it requires a telescope to discover the numbers and signs from one row of houses and shops to the other.

Here the American custom of selling after dark by lamplight was everywhere visible, and everywhere new stone houses were building. I went into Peest's Hotel, now Weeks's, the American Tavern, and there saw indubitable signs that the men of yore had a pretty sprinkling of Yankees among them.

Hamilton has 4500 inhabitants, and is a surprising place, which will reach 10,000 people before two or three years more pass. It has already broad plank-walks, but they are not kept in very good repair; in fact, it cannot escape the notice of a traveller from the Old World that there is too magnificent a spirit at work in the commencement of this place, and that utility is sacrificed to enlargement.

Hamilton is beautifully situated on a sloping plane, at the foot of a wooded range of hills, called mountains, whence fine stone of very white colour in immense blocks is easily procured and brought; and it is very surprising that more of this stone has not been used in Toronto, instead of wood. Brick-clay is also plentiful, and excellent white and red bricks are made; but, such is the rage for building, that the largest portion of this embryo city is of combustible pine-wood.

I left Hamilton in a light waggon on the 9th of July, at half-past five o'clock, a. m.,

having been detained for horses, and rolled along very much at my ease, compared to what the travelling on this route was seven years ago—I was going to say, on this road, but it would have been a misnomer, for there was nothing but a miry, muddy, track then : now, there is a fine, but too narrow, macadamized highway, turnpiked—that is to say, having real turnpike gates.

The view from “the mountain” is exceedingly fine, almost as fine as that from Queenston heights, embracing a richly-cultivated fruit and grain country, a splendid succession of wooded heights, and a long, rolling, ridgy vista of forest, field, and fertility, ending in Lake Ontario, blue and beautiful.

We arrived, at a quarter past seven, at Ancaster, a very pretty little village, with two churches, and composed principally of wooden houses.

The Half-way House is then gained, being about half a mile from the end of the macadamized road, and thirteen and a half from Hamilton. Good bridges, culverts, and cut-

ting, are seen on this section of the line to London. We got to Ancaster at half-past eight, or in about two hours and three quarters, and thence over the line of new road which was, what is called in America, graded, that is, ploughed, ditched, and levelled, preparatory to putting on the broken stone, and which graded road, in spring and autumn, must be very like the Slough of Despond.

At eleven, we reached Maloney's Tavern—most of the taverns on the Canadian new roads are kept by Irish folks—four miles from Brentford.

The Board of Works have been busily employed here, for a great portion of the road is across a swamp, which has been long known as *the* swamp. This is a pine-country, soil, hard clay or mud, and no stone; and the route is a very expensive one to form, requiring great bridging and straightening.

I observe that the estimate for 1845, for Public Works on this road, in the Gore District, for finishing it, is as high as £10,000 currency, and it is to be all planked, and that,

to continue it to London, £36,182 15s. 8d. had been expended up to July, 1844.

The immense expenditure, since 1839, upon internal improvements in Canada, in canals, harbours, lighthouses, roads, &c., is almost incredible, as the subjoined list will show:—

REPORT OF THE BOARD OF WORKS,

SHOWING THE MONEYS EXPENDED UPON EACH OF THE PUBLIC WORKS, FROM THE COMMENCEMENT OF THE WORK, UP TO THE 1ST JULY, 1844.

Certified to be a true abstract of the accounts of the Board of Works.

THOMAS A. BEGLY,
Sec. Board of Works.

HAMILTON H. KILLARLY,
President Board of Works.

The estimate for 1845 was 125,200, as may be seen by the following report of the Inspector General of Canada, as laid before Parliament :—

PUBLIC WORKS.

CANADA WEST.

For present repairs to the Chatham Bridge	.	£100
For improving the Grand River Swamp Road—		
total 10,000—required this year	.	9,000
For improving Rouge Hill and Bridge, also another bridge and hill east of the former—total £6,500		
—required this year	.	5,000
For Belleville Bridge	:	1,500
For the completion of the Dover Road over the mountain, to the limits of the town of Hamilton, and erection of toll-gates	.	5,500

For the improvement of the road from L'Original to Bytown, by Hattfield, Gifford, Buckworth, and Green's Creeks, as surveyed and estimated, together with the building of a bridge across the narrow channel, at the mouth of the Rideau, on the line of the road from Gattineau Ferry to Bytown—total cost, £5,930—required this year £3,000

Owen's Sound Road, comprehending the line from Dundas by Guelph, to Owen's Sound direct (this sum being for the chopping, clearing, drawing, and forming of the portion not yet opened, and towards the lowering of hills, or otherwise improving such bad parts of the line between Nicolet and Dundas as most require it) 4,000

For opening the road throughout from Lake Ontario, at Windsor Harbour, to Georgius Bay, on Lake Huron, this sum being for the opening of the road from the head of Scugog Road to the Narrow's bridge 2,000

For improving Queenston and Grimsby Road, for laying on the metal already delivered, and completing such parts left unfinished as are most advanced, and establishing gates 8,000

(To finish the remainder of this communication within the Niagara district will cost £16,000, and that within the Gore district £10,000.)

For improving the Trent navigation, towards the completion of the works now in progress £12,000—for this year 6,000

To cover expense of surveys, examination, preparation of estimates of the cost of improving the Main Province Road across the ravines of the Twelve and

Sixteen Mile Creeks between Toronto and Hamilton ; opening a road from the main road to Port Credit ; opening and completing a road from the Ottawa at Bytown, to the St. Lawrence in the most direct line ; of opening a road between Kingstown and the Lake des Allumettes on the Ottawa, with a branch to- wards the head of the Bay of Quinte ; of opening a road from the Rideau, thence by Perth, Bellamy's Mills, Wabe Lake, to fall in with the road pro- posed from Bytown to Sydenham ; of completing the Desjardin's Canal ; of constructing the Murray Canal ; of overcoming the impediments to the navi- gation of the river Trent, between Heely's Falls and the Bay of Quinte, and also for a survey of the road from Barrie to Lake Huron, through the townships of Sunindale and Nottawasaga	. 2,000
For improving the Amherstburgh and Sandwich road 1,000
For the Cornwall and L'Original road	. 900
	<hr/>
	£47,000

WORKS OF A GENERAL CHARACTER, AS CONNECTED WITH
THE COMMERCE OR REVENUE OF THE COUNTRY.

To forming a dam across the branch of the Missis- sisqui, and forming a portage road at the Chats	. 1,250
For works upon the Ottawa and roads connected therewith, as detailed in the Report of the Board of Works of 3rd February, 1845, laid before the legislature—total £21,600—required this year	. 8,500
For building a landing-wharf, with stairs and ap- proaches at the Quarantine Station, Grosse Isle	. 2,750

For the extension of piers, and opening inner basin at Port Stanley harbour—total £6,000—required this year	1,200
For dredging at Cobourg harbour	500
For expenses of piers and dredging at Windsor harbour	2,000
For repairs and erection of Lighthouses—total £7,900—this year	5,000
For the formation of a deep water-basin, at the entrance of the Lachine Canal, in the harbour of Montreal, to admit vessels from sea	15,000
For the erection of a Custom House at Toronto	2,500
		<hr/>
		£39,700
		<hr/>
Total currency	£125,200
		<hr/>

W. B. ROBINSON,
Inspector General.

Thus, from the commencement of the operations of the Board of Works in the Canadas, or in about six years, there will have been no less an amount than a million and a half expended in opening the resources of that “noble province,” as Lord Metcalfe styled it, in his valedictory address.

This, with the enormous outlay of nearly two millions during the revolt, the cost of

the Rideau Canal and fortifications, and the money spent by an army of from 8 to 10,000 men, has thrown capital into Canada which has caused it to assume a position which the most sanguine of its well-wishers could never have anticipated ten years ago.

Its connection with England, therefore, instead of being a "baneful" one, as a misinformed partizan stated, has been truly a blessing to it, and proves also, beyond a doubt, that, now it is about to have an uninterrupted water-communication from the oceans of Europe, Asia, and Africa, to the fresh-water seas of Ontario, Erie, Huron, Michigan, and Superior, its resources will speedily develop themselves; and that its people are too wise to throw away the advantages they possess, of being an integral portion of the greatest empire the world ever had, for the very uncertain prospects of a union with their unsettled neighbours, although incessant underhand attempts to persuade them to join the Union are going on.

Taxation in Canada is as yet a name, and a hardship seldom heard of and never felt. Perfect freedom of thought in all the various relations of life exists; there is no ecclesiastical domination; no tithes. The people know all this, and are not misled by the furious rhodomontades of party-spirit about rectories, inquisitorial powers, family compacts, and a universal desire for democratic fraternization; got up by persons who, with considerable talents, great perseverance and ingenuity, ring the changes upon all these subjects, in hopes that any alteration of the form of government will place them nearer the loaves and fishes, although I verily believe that many of the most untiring of them would valiantly fight in case of a war against the United States.

A more remarkable example, I believe, has never been recorded in history than the fate of William Lyon Mackenzie, a man possessing an acuteness of mind, powers of reasoning, and great persuasiveness, with indefatigable research and industry, such as

rarely fall to obscure and ill-educated men.

Involving Canada in a civil war, which he basely fled before, as soon as he had lighted its horrid torch; as soon, in fact, as he had murdered an old officer, whose services had extended over the world, and who was just on the verge of what he hoped would be a peaceful termination of his toils in his country's cause; as soon as he had burned the houses of a widow who had never offended him, and of a worthy citizen, whose only crime in his eyes was his loyalty; and as soon as he had robbed the mail, and a poor maid-servant travelling in it, of her wages. This man fled to the United States, was received with open arms, got a ragged army to invade Canada, then in profound peace with the citizens who protected him.

His failure at Navy Island is known too well to need repeating. He wandered from place to place, sometimes self-created President or Dictator of the Republic of Canada, sometimes a stump orator, sometimes in prison,

sometimes a printer, sometimes an editor, abusing England, abusing Canada, abusing the United States; then a Custom-house officer in the service of that Republic; then again a robber, a plunderer of private letters, left by accident in his office, which he, without scruple, read, and without scruple, for political purposes, published.

Reader, mark his end. It teaches so strong a lesson to tread in the right path that it shall be given in his own words, in a letter which he wrote, on the 11th of November last year, to the "New York Express" newspaper.

He would be pitied, indeed, were it not that the widow and the orphan, the houseless and the maimed, cry aloud against the remorseless one. How many there are now living in Canada, whose lives have been rendered miserable, from their losses, or from injured health, during the watchings and wardings of 1837, 1838, 1839, during the long winter nights of such a climate, during the rains and damps of the spring and of the

fall time of the year, and during the heats of an almost tropical summer. Heat, wet, and cold, in all their most terrible forms, were they exposed to. The young became prematurely old. The old died. Peace to their souls! *Requiescant in pace!*

In the “New York Express” of the 11th November, we find a letter signed by Mr. Mackenzie, in which he endeavours to justify himself. What has particularly engaged our attention are the following paragraphs:—

“If an angel from heaven had told me, eight years ago, that the time would come in which I would find myself an exile, in a foreign land—poor, and with few friends—calumniated, falsely accused, and the feelings of honest, faithful Republicans artfully excited against me—and that among the foremost of my traducers and slanderers would be found Edwin Croswell and the ‘Argus,’ Thomas Ritchie and his journal, Green and the ‘Boston Post,’ with the Pennsylvanian and other newspapers called Democratic; and that these presses and their editors would eagerly

retail any and every untruth that could operate to my prejudice, but be dumb to any explanation I might offer, I could not have believed it. But if a pamphlet (like mine) had been then written, exhibiting, with unerring accuracy, the true characters of the combination of unprincipled political managers, among whom you have long acted a conspicuous part; if a Jesse Hoyt had come forward as state's evidence to swear to the truth of the pamphlet, while the parties implicated remained silent; and if you and your afflicted presses had, as you do now with the letters in my pamphlets, *defended the real criminals*, declared solemnly that you could see nothing wrong in what they had done, and directed the whole force of your widely circulated journal against the innocent person who had warned his countrymen against a most dangerous cabal of political hypocrites of the basest class—in other words, had I known you and your partnership as well in October, 1837, as I do, by dear-bought experience, in November, 1845, I would have

hesitated very long indeed, before assuming any share whatever in that responsibility which *might have given you the Canadas*, as an additional theatre for the exhibition of those peculiar talents, by which this State and Union, and thousands in other lands, have so severely suffered. While reproving gambling and speculation in others, you and your brother wire-pullers have made the property, the manufactures, the commerce of America, your tributaries—even the bench of justice, with its awful solemnities and responsibilities, has been so prostituted by your friends that, when at sea and about to launch three of his fellow-creatures into eternity, a captain in the American navy hesitated not to avow that he had told one of them ‘that for those who had money and friends in America there was no punishment for the worst of crimes.’—Nor did the court-martial before whom that avowal was freely made censure him.

“Observe how Mr. and Mrs. Butler sneer at poor judges, corrupt judges, pauper judges, partial chancellors, and at the administration

of American justice, though by their own party—and how their leader pities Marcy, throws him on the Supreme Court bench as a stopping place, to save him from ruin.—Look at the bankrupt returns of this district alone—one hundred and twenty millions of dollars in debt, very little paid or to be paid, many of the creditors beggared, many of the debtors astonishing the fashionable with their magnificent carriages and costly horses. No felony in you and your friends, who brought about the times of 1837-8. Oh, no! All the felony consists in exposing you. Two hundred years ago it was a felony to read the Bible in English. Truth will prevail yet.

“ I confess my fears that, as I have now no press of my own, nor the means to get one, and am persecuted, calumniated, harassed with lawsuits, threatened with personal violence, saying nothing of the steady vindictiveness of your artful colleague, nor of the judges chosen by Mr. Van Buren and his friends, whom the ‘Globe Democratic Review’ and ‘Evening Post’ denounced in 1840,

and declared to be independent of common justice and honesty, you may succeed in embittering the cup of misery I have drunk almost to the dregs. The Swedish Chancellor, Count Axel Oxenstiern, wrote to one of his children, ‘ You do not know yet, my son, how little wisdom is exhibited in ruling mankind.’ I think that Mr. Butler cannot be a pure politician, and yet the corrupt individual whose dishonesty I have so clearly shown.— Perhaps the United States government may justify him, and the laws punish me for exhibiting him in his true colours. Be it so—I had for many years an overflow of popularity; and if it is now to be my lot to be overwhelmed with obloquy, hatred, and ceaseless slander, I am quite prepared for it, or even for worse treatment. Being old, and not likely at any future time to be a candidate for office, it is of very little consequence to society what may become of me—but I have a lively satisfaction that I was an humble instrument selected, at a fortunate moment, to prove, by their own admission in 1845, every charge I

had made against you and your friends through the 'New York Examiner,' before I left the service of the Mechanics' Institute here, in 1845.

“ W. L. MACKENZIE.”

The Upper Canadians should follow the example of the good people of Amherstburgh, and erect a monument in the capital of Upper Canada to the memory of those who died in consequence of the folly, the hardihood, and the presumption of this man.

There may have been some excuse pleaded for the Canadian French. Misled by designing men, these excellent people of course fancied that, contrary to all possible reason and analogy, a population of about half a million was strong enough to combat with British dominion. Their language, laws, and religion, they were told, were in danger.

But what excuse could the Upper Canadians have—men of British birth, or direct descent, who had grievances, to be sure, but which grievances resolved themselves into the narrow compass of the Family Compact and

the thirty-seven Rectories? Quiet farmers, reposing in perfect security under the Ægis of Britain, were the mass of Upper Canadians.

The "Family Compact" is still the war-cry of a party in Upper Canada, and one person of respectability has published a letter to Sir Allan Macnab, in which he states that, so long as the Chief Justice and the Bishop of Toronto continue to force Episcopalianism down the throats of the people, so long will Canada be in danger. This gentleman, an influential Scotch merchant of Toronto, in his letter dated Hamilton, C. West, 18th November, 1846, says, that the Family Compact, or Church of England tory faction, whose usurpations were the cause of the last rebellion, will be the cause of a future and more successful one, "if they are not checked;" and, while he fears rebellion, he dreads that, in case of a war, his countrymen, "the Scotch, could not, on their principles, defend the British government, which suffers their degradation in the colony."

This plainly shows to what an extent party

spirit is carried in Canada, when it suffers a man of respectability and loyalty coolly to look rebellion in the face as an alternative between his own church and another.

A Church of England man, totally unconnected with colonial interests and with colonial parties, is a better judge of these matters than a Church of Scotland man, or a Free Church man, who believes, with his eyes shut, that Calvinism is to be thrust bodily out of the land by the influence of Dr. Strachan or Chief Justice Robinson.

It is obvious to common sense that any attempt on the part of the clergy or the laity of Upper Canada to crush the free exercise of religious belief, would be met not only with difficulties absolutely insurmountable, but by the withdrawal of all support from the home government; for, as the Queen of England is alike queen of the Presbyterian and of the Churchman, and is forbidden by the constitution to exercise power over the consciences of her subjects throughout her vast dominions; so it would be absurd to suppose

for a moment that the limited influence in a small portion of Canada of a chief justice or a bishop, even supposing them mad or foolish enough to urge it, could plunge their country into a war for the purposes of rendering one creed dominant.

The Church of England is, moreover, not by any means the strongest, in a physical sense, in Upper Canada, neither is the Church of Scotland; nor is it likely, as the writer quoted observes, that it would be at length necessary to sweep the former off the face of the country, in order to secure freedom for the latter.

The Kirk itself is wofully divided, in Canada, by the late wide-spread dissent, under the somewhat novel designation of the Free Church. One need but visit any large town or village to observe this; for it would seem usually that the Free Church minister has a larger congregation than the regularly-called minister of the ancient faith of Caledonia. Now, the members of the Free Church have no such holy horror of Dr. Strachan, Chief Justice Robinson, or Sir Allan Macnab, as

that exhibited in the above-mentioned letter ; nor is it believed that the Church of England would presume to denounce and wage international war against their popular institution. But a person who has lived a great part of his life in Canada will take all this *cum grano salis*.

The Scotch in Upper Canada are not and will not be disloyal. On the contrary, if I held a militia command again, I should be very glad, as an Englishman, that it should consist of a very fair proportion of Highlanders and of Lowlanders.

The British public must not be misled by the hard-sounding language and the vast expenditure of words it may have to receive, in the perusal of either the High Church, or the Presbyterian fulminators in Canada West.

The whole hinges on what the writer calls "the vital question," namely, upon the university of Canada at Toronto being a free or a close borough.

The High Church party contend that this institution was formed for the Church of

England only, and endowed with an immense resource in lands accordingly.

The Church of Scotland, "as by law established," for I do not include the Free Church, has strenuously opposed this for a long series of years, and contends that it has equal rights and equal privileges in the institution.¹

It would consume too much space to enter into argument upon argument anent a question which, ever since the rebellion, has grown from the seeds so profusely scattered in the grounds of dispute on both sides.

The home government, foreseeing clearly that this vexed question is one of paramount importance, has declared itself not neuter, but passive; has given at large its opinion, favourable to general education, conducted upon the most liberal acceptance of the charter; and has left it to the wisdom of the Canadian Parliament to decide.

An eminent lawyer was employed to carry

¹ A large public meeting of Roman Catholics upon the subject of the University question took place lately at Toronto, where a temperate spirit prevailed.

out Lord Metcalfe's conciliatory views, in accordance with the spirit of the instructions from the queen. This gentleman, who had previously been accused by the reform party of belonging to the Family Compact before he accepted high legal office under the colonial government, had been employed also on the part of the Church of England as counsel before the bar of the House, to advocate its claims, and in a singularly clever and lucid speech, of immense length, certainly made the cause a most excellent one. But

"how chances mock,
And changes fill the cup of alteration!"

He was lauded to the skies, and deemed to have achieved the great end sought by the High Church party.

Mark the reverse.

They forgot wholly that, in his capacity of barrister, he did, as every barrister is bound to do, his very best for his employers, and no doubt conscientiously desiring that the rights of the Church of England should be upheld; but no sooner was he employed as a minister

of the Crown to pacify the discontent which the Presbyterians, the Methodists, and the Roman Catholics had expressed very openly, and no sooner did he, by an equal exertion of his intellect, point out the most feasible method of solving the difficulty, than a storm of abuse most lavishly bespattered him, and he was called a seceder from the High Church principles, an abandoner of the High Canadian Tory ranks, or anything else the reader may fancy. Now, those who know this gentleman best are of opinion that he never was a very violent partizan either in politics or in religious matters, and that to his moderation much of the good that has unquestionably resulted from Lord Metcalfe's government may be ascribed.

The chief justice and the bishop, against whom the tirade of the revolutionary press is constantly aimed, may both have once, by their position in the Upper House, had much to do with political matters, but that either of them has ever had in view so absurd a notion as that of governing Canada by their

local influence, and of thus overawing the Crown, is too ridiculous to be believed.

The chief justices and the bishops, in all our colonial possessions, are now most wisely debarred from exercising political sway in the legislative council, over which, some years ago, they no doubt possessed very great influence in many of the colonies.

In Canada, where one half and even more of the population is Roman Catholic, it cannot be believed that a Protestant bishop, or a Protestant head of the civil law, can exercise any other powers than those which their offices permit them to do; and by the British constitution it is very clear that any attempts to subvert the established order of things on their parts would inevitably lead to deprivation and impeachment.

If, therefore, they were really guilty of an endeavour to rule by their family connections, is it probable that 600,000 Roman Catholics, and a vastly preponderating mass of Presbyterians, Methodists, Unitarians, and the endless roll of Canadian dissenters from the Church, would permit it?

That the bishop and the chief justice possess a considerable share of personal influence in Upper Canada, there can be no question whatever; but, after the statement of the former, in his annual visitation published in 1841, that out of a population of half a million there were only ninety-five clergymen and missionaries, where there should be six hundred and thirty-six, if the country was fully settled, it is a fanciful picture that the reformers have drawn of their power and resources—power which is really derived only from intermarriages among the few remnants of the earliest loyalist settlers, or from admiration of their private conduct and abilities. In short, “the family compact” is a useful bugbear; it is kept up constantly before the Canadians, to deter them from looking too closely into other compacts, which, to say the truth, are sometimes neither so national, so loyal, nor so easily explained.

Canada is, at this juncture, without question, the most free and the happiest country in the whole world; not that it resembles

Utopia, or the happy valley of Rasselas, but because it has no grievances that may not be remedied by its own parliament—because it has no taxation—because its government is busied in developing its splendid internal resources—and because the Mother Country expends annually enormous sums within its boundaries or in protecting its commerce.

Why does England desire that the banner of the Three Crosses shall float on the citadels of Quebec and Kingston? why does she desire to see that flag pre-eminent on the waters of Lake Superior or in the ports of Oregon? Is it because Canada is better governed as an appanage of the Crown of Victoria than it possibly could be by Mr. Polk? Is it from a mere desire for territory that the mistress of the seas throws her broad shield over the northern portion of North America? or is it because the treasury of England has millions of bars of gold and of silver, deposited in its vaults by the subjects of Canada?

No, it is from none of these motives: Canada is a burthen rather than a mine of

wealth to England, which has flourished a thousand-fold more since Washington was the first president, than she ever did with the thirteen colonies of the West.

Is it because the St. Lawrence trade affords a nursery for her seamen, or that Newfoundland is the naval school? No; about three or four British vessels now fish on the grand banks, where hundreds once cast anchor. The fisheries are boat-fisheries on the shores instead of at sea, and the timber trade would engage British shipping and British sailors just as largely if Quebec had the beaver emblazoned on the flag of its fortress as if the flag of a thousand years floated over its walls.

The resources of England are inconceivable; if one source dries up, another opens. China is replacing Africa.

The London Economist estimates the increase of capital in England from 1834, or just before the troubles in Canada, which cost her two millions sterling, to 1844, in ten years only, at the rate of forty-five millions

sterling annually — four-hundred and fifty millions, in ten years, in personal property only ! What was the increase in real estate during those ten years ? and what empire, or what combination of empires, can show such wealth ?

Thus, while Canada has been a drag-chain upon the chariot-wheel of British accumulation, did the prosperity of the empire suffer, or is it likely to suffer, by war with the United States, or by separation from England ?

The interests of the United States and the interests of England would no doubt mutually suffer, but the former power, if it annexed Canada, would most severely feel the result. England would then close the ports of the St. Lawrence, as well as those of the seaboard from Quebec to Galveston ; nor would the Nova Scotian and New Brunswick provinces be conquered until after a bloody and most costly struggle ; for they, being essentially maritime, would the less readily abandon the connexion with that power which must

for ages yet to come be preponderant at sea. The Ocean is the real English colony. By similar natural laws, the United States has other advantages and other matters to control in its vast interior.

I forget what writer it is who says—perhaps it was Burke—that any nation which can bring 50,000 men in arms into the field, whatever may be its local disadvantages of position, can never be conquered, if its sons are warlike and courageous.

Canada can bring double that number with ease; and whilst its interests are as inseparable from those of England as they now are, it is not to be supposed that a Texian annexation will dissolve the bond.

We have been greatly amused in Canada during the winter of 1845, after Mr. Polk's "all Oregon or none of it," to find in the neighbouring republic a force of brave militiamen or volunteers turn out for a field day with CANADA and OREGON painted on their cartouche-boxes.—Mr. Polk did not go quite so far, it is true; but a great mass of the peo-

ple in the United States prophesy that, if war lasts, all the North American Continent, from the Polar seas to the Isthmus of Darien, will have the tricoloured stripes and the galaxy of stars for its national flag.

This is all-natural enough ; no one blames the people of the republic for desiring extended fame and empire ; but is it to be extended by the Cæsaric mode, *Veni, vidi, vici*, or by deluging two-thirds of that continent with the blood of man ?

A calm view of antecedent human affairs tells us another tale.

A black population in the south and in the vast Island of Hayti, in Jamaica and in the West Indies ; a brave and enterprising mixed race in Cuba ; the remorseless Indian of the West, whose tribes are countless and driven to desperation ; the multitudinous Irish, equally ready for fighting as for vengeance for their insulted church ; the Anglo-Saxon blood on the northern borders, combined with the Norman Catholics of the St. Lawrence ; innumerable steam-vessels pouring from every part of

Europe and of Asia—are these nothing in the scale? Are the feelings of the wealthy, the intelligent, and the peaceful in the United States not to be taken into account?

Is the total annihilation for a long period of all external commerce nothing? Are blazing cities, beleaguered harbours, internal discontent, servile war, nothing in the scale of aggrandizement? Is the great possibility of the European powers interfering as nothing? Will not Russia, aware now of the value of her North American possessions, look with a jealous eye upon the Bald Eagle's attempt at a too close investigation of her eaglets' nest in the north? Would not France, just beginning to colonize largely, like a share in the spoils?

To avoid all this, is the reason that England clings to Canada, that Canada *must not* be sold or given away. Canada is in short the important State which holds the balance of power on the North American Continent; and, when her Eagle is strong enough to fly alone, it will not be either from

having false wings, or without the previous nursing and tender care of her European mother, who will launch her safely from the pinnacle of glory into the clear sky of powers and principalities.

CHAPTER XI.

Ekfrid and Saxonisms — Greek *unde derivaturs* — The Grand River—Brantford—Plaster of Paris—Mohawks —Dutch forgetfulness—George the Third, a Republican King — Church of the Indians — The Five Nations — A good Samaritan denies a drop of water—Loafers—Keep your Temper, a story of the Army of Occupation—Tortoise in trouble—Burford.

But to resume the journey. We passed the Ekfrid Hotel. Saxon names creep steadily over Canada, whilst barbarous adaptations of Greek and Latin find favour in the United States. A little learning is a dangerous thing. Cicero and Pompey never dreamed or desired that a white and green wooden village in a wilderness, where patent pails and patent ploughs are the staple, should be dignified thus; but, as the French say, *chacun à son goût*.

The first good view of the Grand River was

attained three miles from Brantford, and, although the name is rather too sounding, the Grand River is a very fine stream. It put me singularly in mind, with its oak-forested banks, its tall poplars, and its meandering clear waters, of the Thames about Marlow, where I remember, when I was a boy at the Military College, seeing the fish at the bottom on a fine day, so plain that I longed to put a little salt on their tails.

You look down near the Union Inn, Carr's, on a most beautiful woodland view, undulating, rich, and varied. This part of the country is a sandy soil, and is called the Oak Plains. Here once flourished the Indian. His wars, his glory, his people—where are they? Gone! The Saxon and the Celt have swept off the race, and their memory is as a cloud in a summer's sky, beautiful but dissolving.

Brantford is a very long village, with four churches or chapels, one of them a handsome building, and with fine prospects of the country, through which runs the Grand River.

The houses are mostly of wood, a few of brick, with some good shops, or stores, as they are universally called in America and Canada, where every thing, from a pin to a six-point blanket, may be obtained for dollars, country produce, or *approved* bills of exchange — chiefly however by barter, that true universal medium in a new country, as may be gleaned from any Canadian newspaper about Christmas time, when the subscribers are usually reminded that wood for warming the printer will be very acceptable.

Plank side-walks, a new feature in Canadian towns, are rapidly extending in Brantford, which is just starting into importance; as the government, though it is so far inland, intend to make a port of it, by thoroughly opening the navigation of the Grand River from its mouth in Lake Erie. The works are near completion, and a steamboat, the Brantford, plies regularly in summer. Thus an immense country, probably the finest wheat-land in the world, will be opened to commerce, and the great plaster of Paris quarries of the

river find a market, for increasing the fertility of the poorer lands of the lower part of the province.

Brantford is named after Brant, the celebrated Indian warrior chief, and here the Mohawk tribe of the Five Nations have their principal seat. This excellent race, for their adhesion to British principles in the war of the Revolution, lost their territory in the United States, consisting of an immense tract in the fair and fertile valley of the Mohawk river, in the State of New York, through which the Erie Canal and railroad now run, and possessed by a flourishing race of farmers.

I remember being told a curious story of the Dutch, who have their homesteads on the Mohawk Flats, the richest pasture land in New York. These simple colonists, preserving their ancient habits, pipes, breeches, and phlegm, looked with astonishment at the progress of their Yankee neighbours, and predicted that so much haste and action would soon expend itself. At last came surveyors and engineers, those odious disturbers

of antiquity and quiet rural enjoyments : they pointed their spirit-levels, they stretched their chains across the fair fields of the quiet slumbering valley of these smoking Dutchmen. The very cows looked bewildered, and Mynheer, taking his meerscham from his lips, sighed deeply.

They told him that a railroad was projected across his acres ; he would not have minded a canal. He had survived the wars of the Indians ; he had forgotten Sir William Johnson and his neighbouring castle ; he had gone through the rebellion of Washington without being despoiled ; and had finally, as he thought, settled down in the lovely valley of the meandering Mohawk, in a flat very like what his ancestors represented to him as the pictured reality of Sluys or Scheldtland. He had smoked and dozed through all this excitement, and was just beginning to understand English. The American character was above his comprehension. He remembered George the Third with respect, because his great grandfather was a Dutchman, who had

ascended the British throne, and had proclaimed Protestantism and *Orange boven* as the law of the colonies. He still thought George the Third his ruler; and never knew that George Washington had, Cromwell-like, ousted the monarch from his fair patrimony, on pretence that tea was not taxable transatlantically.

The railroad came: Acts of Congress or of Assembly passed; and fire and iron rushed through the happy valley. The patriarchs lifted up their hands and their pipes in utter dismay.

“Ten thousand duyvels!” exclaimed one old Van Winkle; “vat is dis?—it is too ped! King Jorje is forget himsel. I should not vonder we shall hab a republic next.”

“I dink ve shall,” was the universal response from amidst a dense cloud of tobacco vapour.

The Mohawks, or Kan-ye-a-ke-ha-ka, as they style themselves, are now only a dispersed remnant of a once powerful tribe of the Five Nations. They received several

grants of land in Canada for their loyalty, and among others, 160,000 acres of the best part of the province in which we are now travelling, but it is probable that their numbers altogether do not now exceed 3000. Two thousand two hundred dwell near the Grand River, and a large body near Kingston. The Kingston branch are chiefly Church of England men, and an affecting memorial of their adhesion to Britain exists in the altar-cloth and communion-plate which they brought from the valley of the Mohawk, where it had been given to them in the days of Queen Anne.

A church has recently been erected by them on the banks of the Bay of Quinte, in the township of Tyendinaga, or the Indian woods. It is of stone, with a handsome tin-covered spire, and replaces the original wooden edifice they had erected on their first landing, the first altar of their pilgrimage, which was in complete decay.

They held a council, and the chief made this remarkable speech, after having heard all

the ways and means discussed :—“ If we attempt to build this church by ourselves, it will never be done : let us therefore ask our father, the Governor, to build it for us, and it will be done at once.”

It was not want of funds, but want of experience, he meant ; for the funds were to be derived from the sale of Indian lands. The Governor, the late Sir Charles Bagot, was petitioned accordingly, and the church now stands a most conspicuous ornament of the most beautiful Bay of Quinte.

They raised one thousand pounds for this purpose ; and, proper architects being employed, a contract was entered into for £1037, and was duly accepted. How well it would be if this amount could be refunded to this loyal and moral people from England ! What a mite it would take from the pockets of churchmen !

The first stone was laid by S. P. Jarvis, Esq., Chief Superintendent of Indians in Canada ; and the Archdeacon of Kingston, the truly venerable G. O. Stuart, conducted the

usual service, which was preceded by a procession of the Indians, who, singing a hymn, led the way from the wharf where the clergy and visitors had landed from the steamers, past the old church, through the grounds appropriated for their clergyman's house, and then, ascending the hill westward, they crossed the Indian Graves, and reached the site of their new temple. *Te Deum* and the Hundredth Psalm were then sung, and the Arch-deacon, offering up a suitable prayer, the stone was lowered into its place. The following inscription was placed in this stone :—

To
The Glory of God and Saviour
The remnant of the Tribe Kanyeakehaka,
In token of their preservation by the Divine Mercy,
through Christ Jesus,
In the Sixth Year of our Mother Queen Victoria,
Sir Charles Theophilus Metcalfe, G.C.B.
Being Governor-General of British North America,
The Right Reverend J. Strachan, D.D. and LL.D.,
being Bishop of Toronto,
and the Reverend Saltern Givins, being in the 13th year
of his Incumbency,
The old wooden fabric having answered its end,

This Corner Stone
of
Christ's Church,
Tyendinaga,
was laid in the presence of
The Venerable George Okill Stuart, LL.D.,
Archdeacon of Kingston,
By Samuel Peters Jarvis, Chief Superintendent of
Indian Affairs in Canada,
Assisted by various members of the Church,
On Tuesday, May 30th, A.D. 1843.
James Howard of Toronto, Architect; George Brown of
Kingston, Architect,
having undertaken the Supervision of the work,
and John D. Pringle being the Contractor.

A hymn was sung by the Indians and Indian children of the school; the Rev. William Macauley, of Picton, delivered an address, which was followed by a prayer from the Rev. Mr. Deacon, and Collects, after which the Archdeacon pronounced the blessing.

I have recited this because I feel that it will interest a very large body of my countrymen in England, and trust that those who can afford to consider it will not forget the Mohawks of Tyendinaga, in whom I take the more interest from having had them under

my command during the troubles of 1838, and of whose loyalty and excellent conduct then I have already informed the reader.

I saw this edifice lately ; it is Gothic, with four lancet windows on each side, and buttressed regularly. Its space is 60 feet by 40, with a front tower projecting ; and the spire, very pointed and covered with glittering tin, rises out of the dark surrounding woods from a lofty eminence of 107 feet. It is certainly the most interesting public building in Canada West.

I wish some excellent lady would embroider a royal standard or silk union-jack, that the Indians might display it on their tower on high days and holidays. Depend upon it they would cherish it as they have done the ancient memorials of their faith, which date from Queen Anne.

The Indian village near Brantford also boasts of its place of worship ; but, although it has its ritual from the Church of England, the clergyman comes from the United States and is paid by the society, called the New

England Society. He has lived many years among his flock, and is said to be an excellent man. The Indians are to a man as loyal as those of Tyendinaga. The Society has a school which it supports also, where from forty to fifty Indian children are taught and have various trades to work at.

They are very moral and temperate, and here may be seen the strange spectacle, elsewhere in the neighbourhood of the white man so rare—of unmixed blood. But the Whites amongst them nevertheless are not of the best sample of the race, as a great number of restless American borderers have fixed their tents near the Grand River, and they have managed to get a good deal of their property and lands, although in Canada it is illegal to purchase land from the Indian races. A superintendent, an old officer in the British army, is stationed with the Five Nations purposely to protect them; yet it is impossible for any one to be aware or to guard against the ruffianly practices of those who think that the Red Man has no longer a right to cumber the earth.

The Five Nations are settling; and it is observed that, whenever they cease to be nomadic, and steadily pursue agriculture and the useful arts, the decrease, so apparent in their numbers before, begins to lessen.

The public works, the great high road to London, and the opening of the navigation of the Grand River, have greatly enhanced the value of their property, whilst at the same time it has brought dangers with those conscienceless adventurers from the bordering States, and from the reckless turbulent Irish canal men, who keep the country in constant excitement, and who, owing no allegiance to Britain or to the American Union, cross over from the States to Canada, or *vice versa*, as work or whim dictates, carrying uneasiness and dismay wherever they go.

Latterly, however, these worse than savages have been kept in some control by the establishment of a mounted or foot police, and by stationing parties of the Royal Canadian Regiment on their flanks. The military alone can keep them in awe, though they

cannot always prevent midnight burnings and atrocities. The French Canadians and the Indians cordially detest these canallers.

I was told a story in passing through Brantford, which shows how the spirit of the lower class of American settlers in this portion of Canada is kept up, since they first openly showed it during the rebellion.

A regiment of infantry, I think the 81st, was marching to relieve another at London, and, on arriving here, weary of the deep sandy or miry roads, the men naturally sought the pumps and wells of the village. A fellow who keeps a large tavern, called Bradley's Inn, hated the sight of the British soldier to that degree, that he locked up his pump of good drinking water and left another open, which was unfit for any purpose.

Lately, I see by the papers, this good Samaritan, who could not find it in his heart to assuage the thirst of a parched throat, or to give even a drop of water to the weary, had his house burnt down by accident. It is a won-

der that he had not tried to place it to the account of the soldiers ; but, perhaps, he was ashamed, and perhaps, they being at so great a distance as London is, he thought that such an impossibility would not go down. There was, it appears, no water to quench his devouring flame. *Fiat justitia !*

This part of Canada, and about London, has been a chosen region for American settlers, and also for loafers from the borders of the Republic ; and accordingly you observe that which is not obvious in any part of the United States, twenty miles from the St. Lawrence, or the lakes, great pretension to independence and rough rudeness of manner, contrasted by the real independence and quiet bearing of the sons of Britain.

The refugees, or whatever the American border-settlers or adventurers in Canada may be called, are invariably insolent, vulgar, and unbearable in their manners ; whilst, away from the frontier, in the United States, the traveller observes no ostentatious display of Republicanism, no vulgar insolence to stran-

gers, unless it be in the bar-room of some way-side tavern, where one is sometimes obliged, as elsewhere, to rest awhile, and where the frequenters may be expected to be not either polite or polished.

The Americans may be said to live at the bar; and yet, in all great cities, the bar of the hotels seldom exhibits anything to offend a traveller, who has seen a good deal of the world; nor do I think that purposed insult or annoyance would be tolerated towards any foreigner who keeps his temper.

So it is all over the world. I remember, as a young man, in the army of Occupation in France, when the soul of the nation was ground to despair, at seeing foreign soldiers lording it in *la belle France*, that, at Valenciennes, St. Omers, Cambray, and all great towns, constant collisions and duels occurred from the impetuous temper of the half-pay French officers, and yet, in many instances, good sense and firmness avoided fatal results.

I know an officer, who was billeted, the night before one of the great reviews of the

allied troops, in a small country tavern, where an Englishman had never before been seen, and he found the house full as it could hold of half-pay Napoleonists. The hostess had but one room where the guests could dine, and even that had a bed in it; and this bed was his billet.

He arrived late, and found it occupied by moustached heroes of the guard, Napoleon's cavalry and infantry *demi-soldes*, who had rested there to see the review next day, where the battle of Denain was fought over again with blank cartridge.

They were at supper and very boisterous, but, with the innate *politesse* of Frenchmen, rose and apologized for occupying his bedroom. To go to bed was of course not to be thought of, so he asked to be permitted to join the table; and, after eating and drinking, he found some of the youngest very much disposed to insult him. He watched quietly; at last, toasts were proposed, and they desired him to fill to the brim. The toast they said, after a great deal of impro-

vising, was to the health of the greatest man and the greatest soldier, *Napoléon le Grand !* — *De tout mon cœur, Napoléon le Grand !*

This took them by surprise ; they had no idea that an Englishman could see any merit in Napoleon.

“ Fill your glasses, gentlemen,” said the officer, “ to the brim, as I filled mine.”

They did so, and he said “ *A la santé de Napoleon deux,*” which was then a favourite way with the French Imperialists of toasting his son.

The effect was electric. The most insolent and violent of the *vieux moustaches* took up the stool he was sitting upon and threw it through the window ; the glasses followed ; and then he went round and embraced the proposer.

“ Brave Anglais !” was shouted from many heated lungs ; and the evening not only concluded in harmony, but they caused the hostess to make her unwelcome visitor as comfortably lodged for the night as the resources of her house would admit.

Thus it is all over the world ; firmness and

prudence carry the traveller through among strange people and stranger scenes; and, believe me, none but bullies, sharpers, or the dregs of the populace in any christian country will insult a stranger.

All the stories about spitting, and “I guess I can clear you, mister,” as the man said when he spat across some stage-coach traveller out of the opposite window, are very far-fetched. The Americans certainly do spit a great deal too much for their own health and for other people’s ideas of comfort, but it arises from habit, and the too free practice of chewing tobacco. I never saw an American of any class, or, as they term it, of any grade, do it offensively, or on purpose to annoy a stranger. They do it unconsciously, just as a Frenchman of the old school blows his nose at dinner, or as an Englishman turns up his coat-tails and occupies a fireplace, to the exclusion of the rest of the company.

An Englishman should not form his notions of America from the works of professed tourists—men and women who go to the

United States, a perfectly new country, for the express purpose of making a marketable book: these are not the safest of guides. One class goes to depreciate Republican institutions, the other to praise them. It is the casual and unbiassed traveller who comes nearest to the truth.

Monsieur de Tocqueville was as much prepossessed by his own peculiar views of the nature of human society as Mrs. Trollope. Extremes meet; but truth lies usually in the centre. It is found at the bottom of the well, where it never intrudes itself on general observation.

The Americans have no fixed character as a nation, and how can they? The slave-holding cavaliers of the South have little in common with the mercantile North; the cultivators and hewers of the western forests are wholly dissimilar from the enterprising traders of the eastern coast; republicanism is not always democracy, and democracy is not always locofocoism; a gentleman is not always a loafer, although certainly a loafer is never a

gentleman. A cockney, who never went beyond Margate, or a sea-sick trip to Boulogne, that paradise of prodigals, always fancies that all Americans are Yankees, all clock-makers, all spitters, all below his level. He never sees or converses with American gentlemen, and his inferences are drawn from cheap editions of miserable travels, the stage, or in the liners in St. Katherine's Docks, after the company of the cabin has dispersed.

The American educated people are as superior to the American uneducated as is the case all over Christendom; and John Bull begins to find that out; for steam has brought very different travellers to the United States from the bagmen and adventurers, the penny-a-liners, and the *miserables* whose travels put pence into their pockets, and who saw as little of real society in America as the poor Vicar of Wakefield's family, before they knew Mr. Burchell.

The Americans you meet with in Canada are, with some exceptions, adventurers of the

lowest classes, who, with the dogmatism of ignorant intolerance, hate monarchy because they were taught from infancy that it was naught. Such are the people who lock up their pumps; but they are not all alike. There are many, many, very different, who have emigrated to Canada, because they dislike mob influence, because they live unmolested and without taxation, and because they are not liable every moment to agrarian aggression.

In this part of the Canadas, the runaway slaves from the Southern States are very numerous.

There is an excellent covered bridge over the Grand River at Brantford; and, on crossing this in the waggon, we saw a good-hearted Irishman do what Mr. Bradley refused to do, that is, give drink to a wayfarer. This wayfarer resembled the Red Coat that Mr. Bradley hated so in one particular—he had his armour on. It was a huge mud turtle, which had most inadvertently attempted to cross the road from the river into the low grounds, and a

waggon had gone over it; but the armour was proof, and it was only frightened. So the old Irish labourer, after examining the great curiosity at all points, took it up carefully and restored it to the element it so greatly needed—water. Was he not the Good Samaritan?

Whilst here, we were told that at Alnwick, in the Newcastle district, the government has located an Indian settlement on the Rice Lake very carefully. Each Indian has twenty-five acres of land, and a fine creek runs through the place, on the banks of which the Indian houses have been built so judiciously, that the inhabitants have access to it on both sides.

The Mohawk language is pronounced without opening and shutting the lips, labials being unknown. Some call the real name of the tribe Kan-ye-ha-ke-ha-ka, others Can-na-ha-hawk, whence Mohawk by corruption.

After staying a short time at Clement's Inn, which is a very good one, we left Brantford at half-past one, and were much pleased with the neatness of the place, and par-

ticularly with the view near the bridge of the river. The Indian village and its church are down the stream to the left, about two miles from the town, and embowered in woods.

We drove along for eight miles to the Chequered Sheds, a small village so called; at twenty minutes to four reached Burford, two miles further on, which is another small place on Burford Plains, with a church; and at a quarter past four reached a very neat establishment, a short distance beyond a small creek, and called the Burford Exchange Inn. The country is well settled, with good houses and farms.

We stopped a short time at Phelan's Inn, four miles and a half on, just beyond which the macadamized road commences again; but the country is not much settled between the Exchange and Phelan's Inn.

CHAPTER XII.

Woodstock—Brock District—Little England—Aristocratic Society in the Bush—How to settle in Canada as a Gentleman should do—Reader, did you ever Log?—Life in the Bush—The true Backwoods.

We arrived at Woodstock at eight p. m., and were delighted with the rich appearance of the settlement and country, resembling some of the best parts of England, and possessing a good road macadamized from granite boulders.

Woodstock is a long village, neatly and chiefly built of wood, fifty three miles from Hamilton. It is the county town of the Brock district; and here numbers of gentlemen of small fortunes have settled themselves from England and Ireland. It is a thriving place, and their cottages and country houses

are chiefly built, and their grounds laid out, in the English style, with park palings. Sir John Colborne has the merit of settling this loyal population in the centre of the western part of Canada.

The old road went through a place called absurdly enough Paris, from the quantity of gypsum with which the neighbourhood abounds; and fine specimens of silurian fossils of the trilobite family and of madrepores, millepores, and corallies, are found here. Love's Hotel is the best in the village, and a good one it is.

What with the truly English scenery of the Oak Plains, the good road, and the British style of settlement, Woodstock would appear to be the spot at which a man tired of war's alarms should pitch his tent; and accordingly there are many old officers here; but the land is dear and difficult now to obtain. A recent traveller says it is the most aristocratic settlement in the province, and contains, within ten miles round, scions of the best English and Irish families; and that the society is quite as good

as that of an average country neighbourhood at home. The price of land he quotes at £4 sterling an acre for cleared, and from £1 to £1 10s. for wild land. A friend of his gave £480 for sixty cleared and one hundred uncleared acres, with a log house, barn, and fences.

He moreover gives this useful information, that very few gentlemen farmers do more than make their farms keep their families, and never realize profit: thus, he says, a single man going to Woodstock to settle ought to have at least one hundred pounds a year income quite clear, after paying for his land, house, and improvements.

I have seen a good deal of farming and of farmers in Canada. Farming there is by no means a life of pleasure; but, if a young man goes into the Bush with a thorough determination to chop, to log, to plough, to dig, to delve, to make his own candles, kill his own hogs and sheep, attend to his horses and his oxen, and “bring in firing at requiring,” and abstains from whiskey, it signifies very

little whether he is gentle or simple, an honourable or a homespun, he will get on. Life in the Bush is, however, no joke, not even a practical one. It involves serious results, with an absence of cultivated manners and matters, toil, hardship, and the effects of seasoning, including ague and fever.

Recipe.—First buy your land in as fine a part of the province as possible, then build your log-hut, and a good barn and stable, with pig and sheep-pens. Then commence with a hired hand, whom you must not expect to treat you *en seigneur*, and who will either go shares with you in the crops, or require £30 currency a year, and his board and lodging.

Begin hewing and hacking till you have cleared two or three acres for wheat, oats, and grass, with a plot for potatoes and Indian corn.

When you have cut down the giant trees, then comes the logging. Reader, did you ever log? It is precious work! Fancy yourself in a smock-frock, the best of all working

dresses, having cut the huge trees into lengths of a few feet, rolling these lengths up into a pile, and ranging the branches and brush-wood for convenient combustion; then waiting for a favourable wind, setting fire to all your heaps, and burying yourself in grime and smoke; then rolling up these half-consumed enormous logs, till, after painful toil, you get them to burn to potash.

Wearied and exhausted with labour and heat, you return to your cabin at night, and take a peep in your shaving-glass. You start back, for, instead of the countenance you were charmed to meet at the weekly beard reckoning, you see a collier's face, a collier's hands, and your smock-frock converted into a charcoal-burner's blouse.

Cutting down the forest is hard labour enough until practice makes you perfect; chopping is hard work also; but logging, logging—nobody likes logging.

Then, when you plough afterwards, or dig between the black stumps, what a pleasure! Every minute bump goes the ploughshare

against a stone or a root, and your clothes carry off charcoal at a railroad pace.

It takes thirty years for pine-stumps to decay, five or six for the hard woods; and it is of no use to burn the pine-roots, for it only makes them more iron-like; but then the neighbours, if you have any, are usually kind: they help you to log, and to build your log-hut.

Your food too is very spicy and gentlemanlike in the Bush: barrels of flour, barrels of pork, fat as butter and salt as brine, with tea, sugar—maple-sugar, mind, which tastes very like candied horehound—and a little whiskey, country whiskey, a sort of non-descript mixture of bad kirschwasser with tepid water, and not of the purest *goût*. Behold your *carte*. If you have a gun, which you must have in the Bush, and a dog, which you may have, just to keep you company and to talk to, you may now and then kill a Canada pheasant, ycleped partridge, or a wild duck, or mayhap a deer; but do not think of bringing a hound or hounds, for you can kill

a deer just as well without them, and I never remember to have heard of a young settler with hounds coming to much good. Moreover, the old proverb says, a man may be known by his followers: and it is as absurd for a poor fellow, without money, to have great ban-dogs at his heels, as it would be for a rich nobleman to live in his garret upon bread and water. Moreover, in Canada, most sportsmen are mere idlers, and generally neglectful either of their professions or of their farms. Many a fine young fellow has been ruined in Canada, by fancying it very fine to copy the officers of the army in their sport-manship, forgetting that these officers could afford both in time and money what they could not.

Keep your house, and your house will keep you. Almost all settlers too have mothers, wives, sisters, brothers, cousins, to assist them, or to provide for; and, if they are industrious, a few years make them happy and independent.

Even £50 a year of clear income in the

Bush is a very pretty sum, and £100 per annum places you on the top of the tree—a magnate, a magistrate, a major of militia.

I know many, many worthy families, who live well with their pensions or their half-pay.

What a luxury to have your own land, two hundred acres!—to live without the chandler, the butcher, the baker, the huxter, and the grocer! Tea, a little sugar and coffee, these are your real luxuries.

Soap you make out of the ley of your own potash; fat you get from your pigs or your sheep, which supply you with candles and food; and by and by the good ox and the fatted calf, the turkey, the goose, and the chicken, give your frugal board an air of gourmandism, whilst in this climate all the English garden vegetables and common fruits require only a little care to bring them to perfection. Indian corn and buckwheat make excellent cakes and hominy; and you take your own wheat to be ground at the nearest mill, where the miller requires no money, but only grist. In like manner, the boards for

your house are to be had at the sawmill for logs, for potash, for wheat, for oats.

Keep a few choice books for an evening, and provide yourself with stout boots and shoes, a good coat, and etceteras, besides your smock-frock and shooting-jacket of fustian, and its continuations, and let the rest follow; for you will at last take to wear country homespun, when occasions of state do not require it otherwise, such as church and tea-parties of more than ordinary interest.

People talk about life in the Bush as they do about life in London, without knowing very much about either. Backwoods and backwoodsmen are novelties which amuse for the moment. A backwoodsman, who never worked at a farm, although he may be much in the habit of seeing farmers, has not always just conceptions. He must not live in a village newly made, but actually reside in a log-hut, just erecting, to know what life in the Bush is. Gentlemen and lady travellers are the worst judges possible, because, even if they go and visit their friends, the best foot

is always put foremost to receive them, and vanity or love induces every sacrifice to make them comfortable.

They see nothing of the labours of the seven months' winter, of the aguish wet autumn, of the uncertain spring, of the tropical summer, of ice, of frost, of mosquitoes and black flies, of mud and mire, of swamp and rock, of all the innumerable drawbacks with which the spirit of the settler has to contend, or the very coarse and scanty fare to solace him after his toils of the day.

See a young pair of brothers, sons of an officer of high rank, whose father dying left them but partially provided for, with a mother and several grown-up daughters.

They fly to France to live. This resource might, by a war, be soon broken up. The sons collect what remains of money—they arrive in Canada. They purchase cheap land far in the interior, miles away from any town. They build a log-hut, clear their land, and accumulate gradually the furniture and household goods. Toil, toil, toil.

The log-hut is enlarged. The mother and daughters are invited from home to join their "life in the Bush." They are expected. Everything is made comfortable for them. The brothers are chopping in the woods—night approaches. They return—return to find their log-house, furniture, wardrobe, books, linen—every thing consumed. They are wanderers in the wilderness. Do they despair? Yes, because one brother, the strongest, takes cold—he lingers, he dies.

The survivor, indomitable, yet bowing under his accumulated afflictions, assisted by his neighbours, builds another log-house. His mother and sisters arrive, are dispersed among the nearest neighbours, get the ague. Struggle, struggle, struggle! on, on, on! The pension here is of service. The girls, brought up in luxury, scions of a good race, turn their hands cheerfully to do every thing. Their conduct is admired. Other settlers from the gentry at home arrive with some capital. The locality turns out good. The girls marry well. The sur-

viving son, ten years afterwards, has four hundred acres of his own—thinks of building a house fit for a gentleman farmer to live in, and is surrounded by broad acres of wheat, without a stump to be seen, with a large flock of sheep grazing peacefully on his green meadows, and cattle enough to secure him from want.

This is one case, under my own eye, and the moral of it is, neither of the sons drank whiskey.

Look at another picture. An officer of respectable rank, young and tired of the service, where promotion is not even in prospect, settles in Canada—he has money. He buys at once a fine tract of forest, converts it by his money into a fertile farm, builds an excellent house, furnishes it, marries.

Knowing nothing of farming, fond of his dogs and his gun, delighted in a canoe and duck-shooting, absent day after day in the deer-tracks, occasionally killing a wolf or a bear, absorbed in sport, he leaves his farm to the sole care of an industrious man, who

receives half the crops. He is cheated at every turn; the man buys with the profits land for himself, and leaves him abruptly.

The fine house requires repairs, the fences get out of order, the cattle and the pigs roam wherever they like. Money, too much money, has been laid out. The fine young man perhaps becomes a confirmed drunkard. *Voilà le fin !*

This is another case under my own observation, and I very much regret indeed to say that, of the class of gentlemen settlers, it is by far more frequent and observable than the first. Habits of shooting beget habits of drinking and smoking; and it is not at all uncommon in the backwoods to see a man whom you have known on the sunny side of St. James's, dressed in the height of fashion, and of most elegant manners, walking along with his pointer and his gun in a smock-frock or blouse, a pipe, a clay-pipe stuck in the ribbon of his hat, and with evident tokens of whiskey upon him.

If he works at his farm, which all who are

not overburthened with riches must do, and those that are usually remain in England, he works hard ; and then reflect, reader, that chopping and logging, that cradling wheat and ploughing land, are not mere amusements, but entail the original ban, the sweat of the brow—he must every now and then drink, drink, drink. I have seen a man who would otherwise have been a high ornament to society, whose acquirements were very great, and who brought out an excellent library, abandon literature and his army manners, and drink whiskey, not by the glass but by the tumbler. And what is it, you will naturally ask, that can induce a reasoning soul to do thus? Why! —lack of society, want of current information, the long and tedious winter, and the labours of spring and of autumn. In fact, it is “the backwoods,” the listlessness of the backwoods, which, like the opposite extreme, the fatuity and *blasé* life of a great metropolis, causes men to rush into insane extremes to avoid reflection. The mind is dulled and blunted.

The following facts, translated from an interesting article in the *Mélanges Religieux*," a Roman Catholic periodical, published in Montreal, in the French language, may be relied on, to show how narrowed the ideas of a man constantly residing in the woods are :—

“ There arrived in Montreal, on Wednesday last, a young man about twenty years of age, who had come down from Hudson's Bay, without having, during his long journey, stopped in any town, village, or civilized settlement; so that he stumbled into Montreal with as little idea of a town or of civilization as if he had fallen from the moon, for he had lived on the northern shores of the bay, and had but seldom visited the fur-trading establishments. He had only last spring seen, at Abbititi, Messieurs Moreau and Durauquet, the Roman Catholic Missionaries. He was born of Roman Catholic parents, his father being Scotch, his mother Irish. But he had never left the woods nor the life in the wilds, and had never seen a

priest before last spring. How strange must have been the emotions in the breast of this young man on finding himself thus suddenly cast into the midst of this large town, as one would throw a bale of furs! He expressed his feelings at the time as partaking more of stupor than of admiration.

“When he had recovered from the confusion of his ideas consequent upon the novelty of his situation, he sought the Bishop’s residence, according to the instructions of his father; and at length found himself more at ease, for, understanding his singular position, those he there met with assisted him to collect his scattered thoughts. In answer to the questions addressed to him (he speaks English, and can read and write), he replied that he could not consent to live in such a place; that the noise deafened him, while the crowds of people, running in all directions, agitated and astonished him in a manner he could not explain. He experienced a sensation of suffocation on finding himself enclosed, as it were, in streets of lofty houses;

he saw and admired nothing, being every moment in dread of losing himself in the labyrinth of streets, more difficult for him to recognize than the scarcely marked pathways of his native forests: He was not curious to see any thing, and felt only the desire to fly at once, and again to breathe freely, away from what he felt to be the restraints of civilization. He was taken to the cathedral, where he saw the pictures, the paintings on the roof, and all the ornaments of the church—they were explained to him, and he prayed before the high altar and that of the Holy Virgin. He believed all the instructions of the Church, and was sufficiently informed to receive baptism. During his visit to the church, the organ was played, and an explanation was given him of its harmony. In the midst of all these to him surprising novelties, he was asked what was the predominant sensation in his mind; he answered fear, and that his other feelings he was unable to explain.

“ This simple child of nature, the *naïveté* of whose language, emotions, and habits so

strongly contrasted with the surrounding artificial civilization, afforded a singular study to those present. However humiliating to our self-love, the conduct of this young man abundantly proved that the civilization of which we are so proud, our buildings, our wealth, our industry, all our activity and noise, do not fill with the admiration we expect those who are brought up far from our opulent cities and our artificial manners. Nature, in these immense solitudes, in these primitive manners, has then charms unknown to us, to be preferred to those which, in our existing state, we find so incomparable. We must here close our reflections, for fear of falling into paradoxes difficult to be avoided in questions of this nature.

“This young man has departed, without regret, and has gone to the township of Raudon, where he has relations. There he will again find forests, and will be able to breathe freely, without fearing that the lofty dwellings of the city will intercept his view of the blue sky and the bright sun which he loves.”

Even near population, the settler has, in his way to town and market, to bait his cattle at roadside taverns, where the bar is the place of business, where he meets neighbours, and hears the news of the market and of the world; and the facility with which, throughout Upper Canada, these grog-shops obtain licenses from the magistrates is so great that the evil every day increases.

In towns, this is most particularly observed, and also that, under the designation of "beer-licenses" the most infamous houses for drinking and vice are suffered to exist. It is full time that the parliament interfered with these license-granters, who increase intemperance instead of using their magisterial office to put a stop to it. Father Matthew's principles are much wanted in Canada West.

In Eastern Canada, or, as it is better known, Lower Canada, the contrary is the case. The Canadian French, as a people, are temperate, although the canoe and batteaux

men, lumberers and voyageurs, from the lonely and hard lives they lead, drink to excess ; yet the Canadian is a sober character.

CHAPTER XIII.

Beachville — Ingersoll — Dorchester — Plank road — Westminster Hall — London — The great Fire of London — Longwoods — Delaware — The Pious, glorious, and immortal Memory — Moncey — The German Flats — Tecumseh — Moravian settlement — Thamesville — The Mourning Dove — The War, the War — Might against Right — Cigar-smoking and all sorts of curiosity — Young Thames — The Albion — The loyal Western District — America as it now is.

I was detained at Woodstock for some time by the sickness of one of the horses. The animal had dropped in his stable after our arrival, and refused to feed; consequently, our driver had to look for another; and a miserable one, at a large price, he got. The intense heat had overpowered the horse.

We departed, however, at half-past six in the morning, on the 10th July, and reached Beachville, five miles westward.

Beachville is a small country village, beautifully situated, and the country between is undulating and rich. The driver pointed out Mr. John Vansittart's house, an English looking residence, with extensive grounds.

A creek, called Hard Creek, runs along the road with several mill-sites on it. It loses itself every now and then in deep woods; and altogether this is the prettiest country I have ever seen in Canada. The land also appears good.

At Beachville are saw, grist, and water-mills on an extensive scale, the best in the country, owned and worked by Scotch people.

The creek called Little Thames is seen also, which runs through the Canada Company's lands to the Forks of the Thames at London. This is a settlement forty years old; consequently, every thing is forward in it.

We then came through an equally fine, old-settled country, to Ingersoll, five miles farther. This is a straggling place of about the same age, with mills and creeks, and a large inn, called the Mansion House (Hoffman's).

We drove on to Dorchester, a small settlement and an old mill-site, about eighteen miles from London, where we stopped to recruit our wretched horse, at half-past ten. Here we breakfasted at a roadside inn, not very good nor very comfortable, but were glad to observe that the plank road commenced again.

A plank road in England would be a curiosity indeed: here it is none: fancy rolling along a floor of thick boards through field and forest for a hundred miles. The boards are covered with earth, or gravel, if it can be had, and this deadens the noise and prevents the wear and tear, so that you glide along pretty much the same as a child's go-cart goes over the carpet. But this will only do where wood is plentiful, and thus the time must come, even in Canada, when gravelled roads or iron rails will supersede it.

The country was poorer in this section, being very sandy, until near the tavern called Westminster Hall; what a name! But the beautiful little river was occasionally in sight

in a hollow of woods of the richest foliage. At one place we saw a party of Indians with ponies and goods, going down to a ford, where no doubt their canoes awaited them. Their appearance as they descended was very picturesque, armed as they were with rifles and fowling-pieces, very Salvator Rosaish.

Westminster Hall, where we arrived at ten minutes to two o'clock, and staid an hour to bait, is six miles and a half from London. Cockney land everywhere.

On our approaching the new capital of the London District, we saw evident signs of recent exertions. Fine turnpike-gates, excellent roads, arbours for pic-nic parties, and before us, at a distance, a large wide-spread clearance, in which spires and extensive buildings lifted their heads.

London is a perfectly new city ; it was nothing but a mere forest settlement before 1838, and is now a very large, well laid out town. We arrived at five p.m., and put up at a very indifferant inn, the best however which the great fire of London had spared. The town is laid out at

right angles, each street being very wide and very sandy, and where the fire had burnt the wooden squares of houses we saw brick ones rising up rapidly. There is now a splendid hotel, (O'Neill's and Hackstaff's) where you may really meet with luxury as well as comfort, for I see, *mirabile dictu*, that fresh lobsters and oysters are advertised for every day in the season. These come from the Atlantic coast of the United States, some thousand miles or so ; but what will not steam and railroad do ! We saw a stone church erecting ; and there is an immense barrack, containing the 81st regiment of infantry and a mounted company, or, as it is called in military parlance, a battery of artillery.

London was so thickly beset with disaffected Americans during the rebellion, that it was deemed necessary to check them by stationing this force in the heart of the district ; and since then the military expenditure and the excellent situation of the place has created a town, and will soon create a large city.

The adjacent country is very beautiful, particularly along the meandering banks of the Thames. I saw some excellent stores, or general shops; and, although the houses, excepting in the main street, are at present scattered, and there is nothing but oceans of sand in the middle, it wants only time to become a very important place. General Simcoe, when he first settled Upper Canada, thought of making it the metropolis, but it is not well situated for that purpose, being too accessible from the United States.

I staid here all night and part of next day; and here I found the disadvantages of an education for the bar; for my bedroom was immediately over it, and it was open the greatest part of the night. Drinking, smoking, smoking, drinking, incessant, with concomitant noise and bad language; which, combined with a necessity for keeping the window open on account of the heat, rendered sleep impossible. I have slept from sheer fatigue under a cannon, or rather very near it, when it was firing, but Vauban himself could not

have slept with the thermometer at 100° Fahrenheit over a Canadian tap-room.

I was glad to leave London in Canada West for that reason, and departed the next day in a fresh waggon at half-past five p.m., arriving at the Corners, six miles off, where a bran-new settlement and bran-new toll-gate appeared with a fine cross road, that to the right leading to Westminster, that to the left to Lake Erie. I was sorry that the plank road was finished only to this place ; but we had fine settlements all the way.

Then begins a new country, and that most dreary and monotonous of Canadian landscape scenery—the Long Woods. This lasts to Delaware, where we stopped at eight o'clock, on a fine evening, having travelled twelve miles from the Corners.

Here the road suddenly turns from the river to the right ; and we drove past Buller's New House, which he is building, to his old stand. It was ancient enough, but respectable ; and if the rats and mice and other small deer could only have been persuaded that one had

had no sleep the night before and that the weather was intensely hot, we should have done well enough ; although some soldiers on a lookout party for deserters, and some travellers, were not at all inclined to sleep themselves, or to let others enjoy the blessings of repose.

Delaware is a very pretty village, and the Indians are settled some seven miles from it. It has a very large and very long bridge over the Thames.

We started, most militarily, at four in the morning of Friday the 12th of July, without recollecting King William, or the Pious, Glorious, and Immortal Memory. But we were to be reminded of it.

Here we saw the labours of the Board of Works in the Great Western Road to much advantage, in deep cuttings and embankments, fine culverts and bridges, with lots of the sons of green Erin—"first flower of the earth, and first gem of the sea"—and their cabins along the line of works, preparing the level for planking.

The country is flat, but very fine and well

settled. Quails amused themselves along the road, looking at us from the wooden rail fences, and did not leave their perches without persuasion. The rascals looked knowing, too, as if they were aware that waggoners did not carry guns.

I heard the real whip-poor-will or night-jar last night frequently, sighing his melancholy ditty along the banks of the beautiful Thames. The cry of the Canada quail, which is a very small partridge-like bird, is very plaintive. As we passed them, they gave it out heartily—Phu—Phoo-iey. We arrived at Smith's tavern, seventeen miles, at half-past seven, breakfasted, and stayed until ten, at that miserable place.

We then drove on, and passed Moncey in Caradoc, so named from an Indian tribe. It is a pretty village, where they had just finished a church, whereon banners were flying, which showed us, that if we had forgotten King William, some folks here had not; and, out of bravado, a refugee American had stuck a pocket-handkerchief flag of the Stars and

Stripes up at his shop-door, which we prophesied, as evening came, would be pulled down, because orange, blue, and red flags flourished near it. This is an Indian village, into which the Americans and other white traders and adventurers have set foot.

I was charmed with the scenery, consisting of fertile fields, rich woods, the ever-winding Thames and undulating mammillated hills, covered with verdure. Happy Indians, if unhappy Whites were not thrusting you out!

We arrived at one o'clock at Fleming's Inn, much better than the last, twelve miles. Here we rested awhile.—Starting again, the country was found but very little settled, with long tiresome woods, but still beautiful, all nearly oak. We halted at the German Flats, not to get out, for there was no abiding-place, but to look at the ground, where the battle in the last American war took place, in which Tecumseh, the great Tecumseh, met his death, and where Kentucky heroes made razor-straps of his skin.

Seven miles after leaving these immense

woods, the valley of the Thames opens most magnificently in a gorge below, and spreads into rich flats to the left, embowered with the most beautiful forest scenery, in which, about a mile off, stand the Moravian church, school, and Indian village. A more lovely spot could not have been selected. There is a large Indian settlement of old date here; and, as we drove along, we passed through two deserted orchards; the road had rendered them useless; and, from which and its neighbourhood, the Indians had retired into their settled village below. Here the forest was gradually regaining the mastery: fruit-trees had become wild, and the Thames ran in a deep bold ravine far below, clothed with aged and solemn trees, willows and poplars, intermixed with oak, beech, ash, and altogether English and park-like. It put me in mind of the opening chapter of “Ivanhoe.”

The road was a deep sand; and we stopped a little at Smith's Inn, three miles and a half from our night's halt. Here the soil changes to clay, and the country is not much settled,

but is beginning to be so. We saw bevvies of quail on the road-side, which the driver cut at with his whip, but they were not disposed to fly. We arrived at Freeman's Inn at half-past six p.m., twelve miles, and brought up for the night at Thamesville, where there is a dam and an extensive bridge, and altogether the preparation for the plank road is a very extraordinary work, embracing much deep cutting. Here all is sand again, but the occasional glimpses of the Thames, as you approach this village, are very fine and picturesque. Squirrels, particularly the ground species, or chippemunk, amused us a good deal by their gambols as we drove along. The village of Thamesville is very small.

Oh, Father Thames, did you ever dream of having *ville* tacked to your venerable name? But, as the Nevilles have it, *ne vile velis*.

I amused myself here on a scorching evening with looking about me, as well as the heat would permit; and here I first heard and first saw that curious little Canadian bird, the mourning dove. It came hopping along the ground close to the inn, but the evening

was not light enough for me to distinguish more than that it was very small, not so big as a quail, and dark-coloured. It seemed to prefer the sandy road ; and, as it had probably never been molested, picked up the oats or grain left in feeding the horses. It became so far domesticated as to approach mankind, although the slightest advance towards it sent it away. My host, a very intelligent man, told me that it always came thus on the hot summer nights ; and we soon heard at various distances its soft but exceedingly melancholy call. It appears peculiar to this part of Canada, and is the smallest of the dove kind. I know of nothing to compare with its soft, cadenced, and plaintive cry ; it almost makes one weep to hear it, and is totally different from the coo of the turtle dove. When it begins, and the whip-poor-will joins the concert, one is apt to fancy there is a lament among the feathered kind for some general loss, in the stillness and solemnity of a summer's night, when the leaves of the vast and obscure forest are unruffled, when the

river is just murmuring in the distance, and the moon emerging from and re-entering the drifting night-cloud, in a land of the mere remnant of the Indian tribes gone to their eternal rest.

This in a contemplative mood forcibly reminds us of that sublime passage of holy writ, wherein that thrilling command is embodied, to “Remember now thy Creator in the days of thy youth, when he shall rise up at the voice of the bird.”

The cruel treatment of the aborigines of that half of the world discovered by Columbus rises, on such an occasion, to the memory, with all its force. Here we stood on that soil, a small portion of which has been doled out to them in return for an empire; and here we could not avoid reflecting upon the injustice which has been so unsparingly dealt out to the Indian in that neighbouring Republic instituted to secure freedom and impartial government to all men.

Yes, a nation claiming to be the most powerful under the sun, claiming a common

origin, quarrelled for self-government; the mild sway of a limited monarchy was tyranny and bigotry; established laws and a state religion were swept away under a feeling that the child was strong enough to defy the parent. A more perfect form of government was necessary to the welfare of the human race: Washington arose, and a Republic was created. Did it continue in unison with the aspirations and views of that great man? did he think it requisite to extirpate the Red Men? did he forbid the Catholic to exercise the rights of conscience? did he intend that the Conscript Fathers should break their ivory wands, and bow to the dust before plebeian rule? did he imagine, in declaring all men equal, that mind was to succumb before mere matter, that intelligence was to be ground under the foot of physical force?

The Englishman, the true Englishman, and by that word I mean a citizen of England, a Canadian, as well as he born in Britain or Ireland, judges differently; he acknowledges all men equal, and that all have an equal

right inherent in them to receive equal protection ; but he renders to Cæsar the things that are Cæsar's, and as he loves his own self, so loves he the representative of every soul bearing the proud name of a British subject.

He well knows, from the experience of all history, sacred and profane, that it is by maintaining order, in the institution of divers ranks in society and in government, that the true balance of power is found ; and he feels that, if once that power is obtained by either extreme of the scale, his liberty, both of mind and of body, is at an end.

The manner in which Indian rights are treated in America is so glaring, that the philanthropist shudders. Protocols pass ; the country west of the Mississippi is declared to belong first to Mexico, then to Spain, then to France, then to England, then to the United States. At last, the United States, strong enough to play a new game, a much more lofty one than the Tea Tragedy, defies the whole world, issues a decree irrevocable as those famous ones of the Medes and the Per-

sians, and, perhaps, equally to pass into oblivion, that all the New World is to be the property of the descendants of the Anglo-Saxons—all the New World, never mind whether it be Monarchical England's, Imperial Brazil, Republican Mexico, Peru, Bolivia, &c.—all is to be guided by the banner of the Stars and Stripes.

Who among the statesmen ever dreams that the Red Man has any rights, who ever cares about his property in the wilds of the Prairies, of the Rocky Mountains, of the unknown lands of the Pacific! The United States declares that all Northern America is hers from the Atlantic to the Pacific, and the bloody flag of war is unfurled to obtain the commencement of this crusade against right and against reason, although the United States has ten times as much land already as ten times its present population can fill or cultivate, and then, Oregon is the war cry,

“ Truly to speak it, and with no addition,
We go to gain a little patch of ground,
That hath in it no profit but the name;

To pay five *dollars*, five, I would not farm it ;
Two thousand souls and twenty *million dollars*
Will not debate the question of this straw ;
This is th' imposthume of much wealth and peace,
That inward breaks, and shows no cause without
Why the man dies——”

and then, in case Oregon should fail, advantage is taken of Mexico's distractions to negotiate for California.

The Red Man, the poor Red Man, may however have a voice in all this, that may speak in thunder. He is neither so powerless, nor so utterly contemptible as is supposed. In the wilds of the West, it is said, including the roaming horsemen of Mexico, 100,000 warriors exist. Even against 20,000, what army entangled in the forest, hidden in the Prairie grass, lost in the wilderness defiles of the vast Andes of the north, could also exist? and can the American government afford to detach regular troops for such a dreadful warfare? will the militia undertake it? Can an American fleet of sufficient power and resources be kept in the Pacific to counteract and send supplies? He

who knows the western wilds well knows that once concentrate Indian warfare, and it would be impossible to keep together or to supply such an army as that of the Republic, unsupported, as it must necessarily be, by a fleet.

The time is coming, and that rapidly, there can be no doubt, when the white man will possess exclusively the Pacific coast; but this is to be achieved by the commercial and not by the physical power, and that it is yet very distant when any one nation will obtain it is the belief of all reasoning people; for even should the Americans force Mexico from its proper station, should they obtain California and Oregon, will Russia look quite quietly on, will France see her great scheme of Pacific colonization in danger, and will England tamely submit to have her eastern territories and the new trade with China put in jeopardy?

I think not, and also conceive that it is as impossible for the United States to support a lengthened war with any great European

power as it is for any great European power to conquer or to subdue any portion of the United States.

Spain too is gradually recovering from the shock, which the loss of her Ophir inflicted on her ; more liberal notions are gaining ground in Iberia ; and it is by no means impossible, that, backed by France, she may yet resume her power in America. Look at the tenacity with which, amidst all her reverses, she has held on to Cuba.

There is, in fact, no surmising the results of a mad war on the part of America.

But, in all their profound calculations, the Indian, the poor despised Indian, is forgotten. How he is to live, how he is to die, are alike matters of indifference.

Well may the mourning dove haunt the villages of the Five Nations !

Thamesville—how I detest the combination ! it must have been named in the very spirit of gin-sling—is a place very likely to become of importance when the great western road is quite completed.

I was listening to the mourning dove, which then gave a balm to my wounded spirit, when I observed on the bench under the verandah, or *stoup*, as the Dutch settlers call it, of the inn, on the seat near me, a mass of black mud, or some such substance. Always curious—a phrenologic doctor told me I had the bump of wonder—I took hold of it, and found it to be adherent. It smelt strongly of bitumen. The landlord seeing me examining it chimed in, and said that the Indians had brought it to him from thirteen miles beyond Cornwall's Creek, where there was an immense deposit of the same kind. It was, in fact, soft asphalte, or petroleum, or bitumen, or whatever the learned may please to designate it, in a state of coherence.

My researches did not stop here: I had had specimens of all the Canadian woods to send officially for transmission to England, and amongst others I had observed a very curious one, called white wood, which was certainly neither pine, nor any thing approaching to the fir kind. It was very light,

very tenacious, and is extensively employed in this portion of Canada, where fir and pine are not common, for the purposes of flooring and building, making an extremely delicate and ornamental board.

In travelling along I had asked the name of every strange tree, and so frequently had received the words white wood for answer, that I at last found it was a Canadian poplar, which grows in the western and London districts to an enormous size.

The cotton wood is also another species of western poplar, and both would form a useful and an ornamental addition to our park scenery at home.

The white wood, the cotton wood, and the yellow white wood, are used in this part of Canada for all building purposes, wherein pine is employed elsewhere, and the last named makes the best flooring. I should think, from its lightness and beauty, that it might be used with great advantage in Tunbridge ware.

The quaking asp is also another poplar of

western West Canada, and is a variety of the aspen.

Here too I began to observe gigantic walnut-trees, from which such a large proportion of household furniture throughout Canada is manufactured, but regretted to find that it is much wasted in being split up into rails for fences by the farmers, on account of its durability. They are, however, beginning to be sensible of its value, for it is now largely exported to England and elsewhere. The size of the black walnut and of the cotton wood is inconceivable : of the latter curbs for the mouths of large wells are often made, by merely hollowing out the trunk.

Vegetation in the western district is, in fact, extraordinary, and altogether it is undoubtedly the garden of Canada. Tobacco grows well in some portions of it, and is largely cultivated near the shores of Lake Erie. I believe most of the Havana cigars smoked in Canada, particularly at Montreal, are Canadian tobacco. So much the better ; for if

a man must put an enemy to his digestive organs into his mouth, it is better that that enemy should be the produce of the soil of which he is a native or denizen, as he derives some benefit from the consumption, although consumption of another sort may accrue.

I have long and earnestly thought upon the subject of *the weed*, and have come to the conclusion that, as a necessary of life, it is about upon a par with opium. Men of the lower classes, I mean labouring people, who leave off drinking either from religious motives or from fear, usually take to smoking, and in general their constitutions are as much injured by the one as by the other. Cigar-smoking is a sort of devil-may-care imitation of the vulgar by gentlemen, and is no more requisite for health or amusement than whiskey, dice, or cards. It is amusing in the extreme to see old fellows aping extreme juvenility, and professing to smoke before breakfast; and it is ridiculous to see young gentlemen, very young and very green, cigar in mouth, fancying it very manly and very

independent to imitate a rough, weather-beaten sailor or soldier, who, not being able to smoke a cigar, sticks to the pipe. That it stupifies is certain, that it is very vulgar is more certain, and that it injures health is more certain still. I wonder if Father Matthew smokes—almost all priests do: they have very little other solace.

The approach to Chatham is very pretty. Young Thames, for I do not see why there should not be Young Thames as well as Young England, that most absurd of all D'Israelisms, looks enchanting in a country where lakes as flat on their shores as a pancake take the lead, and where rivers are creeks, and creeks are—nothing.

We crossed a long whitewashed bridge, much out of repair, and saw an enormous American flag upon a very little American schooner, which had penetrated thus far into the bowels of the land. Bunting cannot be dear in the United States, and English Manchester must drive a pretty good trade in this article.

The town of Chatham is situated on the banks of the Thames and of a large creek; and, being a Kentish man, I should have felt quite at home but for three things, videlicet, that enormous American flag; the name of the creek, which was Mac Gill or Mac something; and a thermometer pointing to somewhere about 101° Fahrenheit at nine a.m. Besides this, the town is a wooden one, and has a wooden little fort, which divides Scotland from Kent, or the river from the creek, nicely picketted in, and kept in the most perfect order by a worthy barrack serjeant, its sole tenant, whose room was hung round with prints of the Queen, Windsor Castle, the Duke of Wellington, and Lord Nelson—all in frames, and excellently well engraved, from the “Albion” newspaper.

The Albion newspaper is no ordinary hebdomadal; it has disseminated loyalty throughout America for years, and, as a gift on each 1st of January, has been in the habit of publishing a print of large size, engraved in exceedingly brilliant style, which is presented

to its subscribers. The Queen, the Duke, the Conqueror of the Seas, Walter Scott, and his Monument at Edinburgh, &c., are the fruits; and these plates would sell in England for at least half a guinea, or a guinea each.

The Albion, moreover, gives extracts at length from the current literature of England; and thus science, art, politics, agriculture, find admirers and readers in every corner of the backwoods.

Dr. Bartlett, its editor, at New York, deserves much more than this ephemeral encomium, for he has done more than all the orators upon loyalty in the Canadas towards keeping up a true British spirit in it. The Albion, in fact, in Canada is a *Times* as far as influence and sound feeling go; and although, like that autocrat of newspapers, it differs often from the powers that be, John Bull's, Paddy's, and Sawney's real interests are at the bottom, and the bottom is based upon the imperishable rock of real liberty. It steers a medium course between the *extrême droit* of the so-called Family Compact, and

the *extrême gauche* of the Baldwin opposition.

Political feeling ran very high in the section of country through which we are travelling, both in the war of 1812 and in the rebellion of 1837; and, from the vicinity of the Western district to the United States, in both instances it was inferred by the American people that an easy conquest was certain. Proclamations followed upon proclamations, and attacks upon attacks, but the people loved their soil, and the invaders were driven back. So it will be again, if, unhappily, war should follow the mad courses now pursuing. The Canadians at heart are sound, and nowhere is this soundness more apparent than in the western district. It is not the mere name of liberty which can tempt thinking men to abandon the reality.

It has fallen to my lot to be acquainted with many leaders of faction, both in the Old and in the New World, and I never yet knew one whose personal ambition or whose private hatred had not stimulated him to endeavour

to overturn all order, all rule. The patriot, whose sole aim is to amend and not to destroy, is now-a-days a *rara avis*, particularly if he is needy. One has only to read with attention the details of the horrors of the French revolution to be fully impressed with this fact. Where was patriotism then? and was not Napoleon the real patriot when he said, "two or three six-pounders would have settled the *canaille* of Paris!" I by no means advocate the *ultima ratio regum* being resorted to in popular commotions, in saying this; but France would have been happier had the little corporal been permitted to use his artillerymen. It has often surprised me, in reading the history of the American revolution, assisted as the Americans were by the demoralised French of that day, that that revolution was so bloodless a one; a fact only to be accounted for by the agricultural and pastoral character of the people who engaged in it, and by the unwillingness, even at the last moment, to sever all ties between the parent and the child. The character of that

population has greatly altered since ; generations have been born on the soil, whose recollections of their progenitors across the Atlantic have dwindled to the smallest span ; and the intermixture of races has since done everything but destroy all filial feeling, has in fact destroyed nearly all but the common language, whilst ultra-democracy has been steadily at work upon the young idea to inculcate hatred to monarchy, and, above all, to the limited monarchy of England. Will the result be less harmless than the Tea Triumph ? The world, it is to be feared, will yet see two nations, the most free in the world, speaking the same tongue, educated from the same sources, embruing their hands in each other's blood, to build up a new universal system, impossible in its very nature, or to support that which the experience of ages has perfected, and which three estates so continually watch over each other to guard.

CHAPTER XIV.

Intense Heat—Pigs, the Scavengers of Canada—Dutch Country—Moravian Indians—Young Father Thames—Ague, a cure for Consumption—Wild Horses—Immense Marsh.

I do not remember a day so hot as.
I remember no day so hot as.
 (I never remember so hot a day as) the 13th of July; people in England can have no idea of the heat in Canada, which they always figure to themselves as an hyperborean region. On our journey from Thamesville, when near Louisville, a neat hamlet by the wayside, in a beautiful country, settled by old Dutch families, on a fine bend of the Thames, we passed in the woods a dead horse, and found some friends at Chatham, who told us that it had dropped down from the intense heat. Those scavengers of Canada, the pigs, were like certain politic worms already busily at work on the carcase, in which indeed one had buried itself.

In this Dutch country, you find the new road to Lake Erie, to the Rondeau from Chatham *graded*, or ready for planking, for twenty-six miles, and the new road to Windsor is also nearly finished; so that Chatham will now have an excellent land route to the Detroit river, as well as to Lake Erie; and as the Rondeau, a remarkable round littoral lake, is also converting into an excellent harbour, all this portion of Canada, the fairest as well as the most fertile, will progress amazingly.

I saw the chief of the Moravian Indians near Thamesville, and had some conversation with him. He is a modest, middle-aged man, and rules over about two hundred and fifty well-behaved people. The government have given him two hundred acres of land in sight of the Moravian village, and there he dwells in patriarchal simplicity.

Their spiritual and temporal concerns are under the supervision of the brethren at Bethlehem, the principal settlement of the Moravian fraternity in the United States; and they

have a neat chapel and school, conducted with the decorum and good results for which that sect are noted.

Petroleum springs and mineral oil fountains are frequent near this village, and the whole country here appears bituminous, the bed of the Thames being composed of shales highly impregnated with it. Salt is manufactured in small quantities by the Indians from brine-springs here.

We saw the remarkable harvest of 1845 in all its glory on this route, as the Dutch farmers were every where at this early period cutting the wheat, and heard that on Willett's farm on the Thames it had been cut as early as the 10th of July.

My *compagnon de voyage* I had taken up in the morning, on account of the intelligence which he displayed, and in return for the ride he gave me much information.

The banks of Young Father Thames, after leaving Chatham, and about it, are very low and flat, consequently, fever and ague are by no means rare visitors. He described the

ague as being beyond a common Canada one ; and, as he was of Yankee origin, the reader will readily understand his description of it. I asked him if he had ever had it. " Had it, I guess I have ; I had it last fall, and it would have taken three fellows with such a fit as mine was to have made a shadow ; why, my nose and ears were isinglass, and I shook the bedposts out of the perpendicular."

I queried whether the country was subject to any other diseases, such as consumption.

" If you have any friend with a consumption," said he, " send him to Thamesville ; consumption would walk off slick as soon as he got the ague. No disorder is guilty of coming on before it, and it leaves none behind."

We left Chatham in the steamboat Brothers for Windsor at three o'clock p. m., after having had a very good dinner at Captain Ebbert's inn, the Royal Exchange, which would do credit to any town.

The Thames rolls for some miles, broad and deep, through a succession of corn-fields and

meadows, with fine settlements, and, after passing through the great western marshes, enters Lake St. Clair, at twenty miles from Chatham. The rest of the route is across the lake by its southern shore, twenty miles more, and into the Detroit river for eleven miles to Windsor, on the Canada shore, and the city of Detroit, on the American side.

The Thames keeps up its English character well, for it passes through the townships of Chatham, Dover, Harwich, Raleigh, and Tilbury, before it reaches Lake St. Clair, and then we coast Rochester, Maidstone, and Sandwich.

The most curious thing on this route is the sinuosity of the river and the immense marsh, where the grasses are so luxuriant, that its appearance is that of the Pampas of South America, or of one unbroken sea of verdure. Nor is the grass, in its luxuriance, the only reminiscence of those vast meadows. Three hundred thousand acres, wholly unreclaimed on both sides of the river, are filled, particularly on the south side, with droves of wild horses and cattle — the former so numerous,

that strings of them may be seen as far as the eye can reach ; nor can you see the whole even near you from the deck of the vessel, as the grass is so high that sometimes they are hidden, and frequently you observe only their backs. They live here both in summer and in winter, but in very severe weather are said to go ashore, or into the higher lands, in search of the bark of the red elm. The owners brand them on the shoulder, and they are caught, when any are wanted, by snaring them with a noose.

These horses are small, and usually dark-coloured ; and a good one is valued at fifty dollars, or twelve pounds ten shillings currency, about ten pounds English money. Hardy, patient, and excellent little animals they are.

I thought of the worthy lieutenant-governor of Upper Canada, Sir Francis Bond Head, when these wild horses of Canada first met my sight, as I saw, on a small scale, that which he has so vividly represented on so splendid a one in South America.

It is said that this immense prairie may be drained by lowering the St. Clair Lake, and some attempts have been ineffectually made to cultivate small portions of it near the mouth of the river, where there is a lighthouse. There were two huts, and people residing in them, with small garden patches of potatoes and peas. Forty acres had been ploughed by a settler, Mr. Thompson, of Chatham; but, although the soil is excellent, such is the vigorous growth of the grass, and the difficulty of getting rid of its roots, that it soon recovered its ancient domain. In fact, the wind spreads the seed rapidly; and as the kind is chiefly the blue-joint, it is almost impossible ever to get rid of it, unless the water-level is lowered, which is not very probable at present.

CHAPTER XV.

Engineer-officers have little leisure for Book-making—Caution against iced water—Lake St. Clair in a Thunderstorm—A Steaming-dinner—Detroit river and town—Windsor—Sandwich—Yankee Driver—Amherstburgh—French Canadian Politeness—Courtesy not costly—Good effects of the practice of it illustrated—Naked Indians—Origin of the Indians derived from Asia—Piratical attempt and Monument at Amherstburgh—Canadians not disposed to turn Yankees—Present state of public opinion in those Provinces—Policy of the Government—Loyalty of the People.

A person employed actively in public life is a very bad hand to engage in book-making. I often wonder whether this trifle, now intended as an offering to the reading people, will ever get into print. A little memorandum-book supplies the *matériel*, and a tolerable memory the embellishment. An engineer-officer, of all other functionaries, needs a memory ; settling at one moment the

expenditure of vast sums ; at another, looking into the merits of a barrack-damage worth sixpence ; then, field-officer of the day inspecting guards—next, making experiments on the destructive effects of gunpowder, commencing with a percussion-pistol, and ending with a mine ; buying land, taking altitudes of the sun and of the moon, examining a Gunter's chain or a theodolite, sitting as member of a court-martial, or of a board of respective officers, or counting the gold and silver in the military chest ; superintending a fortification of the most intricate Vaubanism ; regulating the dip of the needle, or the density of the earth ; putting an awkward squad through the most approved manœuvres ; studying the integral calculus, or the catenarian curve ; bothered by Newton or La Place ; reading German or Spanish ; exploring Oregon, or any other terra incognita ; building docks, supervising railways, surveying Ireland, governing a colony, conducting a siege, leading a forlorn hope ; an Indian chief, or commanding an army (both the latter rather rare) ; well may

his motto be, as that of his corps is, *Ubique*. So, gentle reader, if there is wandering in the matter of these pages, put it down, not to the want of method or manners, but to the want of time; for, even in a dull Canadian winter, it is only by fits and snatches that the mysteries of book-making can be practised. The intervals are uncertain, the opportunities few. At one hour, one is drawing one's sword; at the next, in one of the two drawing-rooms, namely, that where ladies congregate, and that in which steel-pens chiefly shine.

But it is necessary, nevertheless, to go on with any thing one seriously begins; and, although the "art and pratique part" of book-making is, considering the requisite labour of bad penmanship, rather disgusting, yet the giving "a local habitation and a name" to the ideas floating on the sensorium is pleasant enough. It would be better if one had a steam-pen, for I always find my ideas much more rapid than consists with a goose quill. The unbending of the mind in a trifle like the present is also agreeable; and if the

reader only likes it, as much as it amuses me and it whiles away graver cares, and the every-day monotony of a matter-of-fact existence, so much the better. An engineer-officer has no time to become a *blasé*, but every body else is not in his position, and thus this "little boke" may be taken up with the morning paper, and your man of the world may be induced to go so far as to say, "Wild horses in Canada!" I never heard of them before; I will positively read a page or two more some rainy morning."

Blasé, dear *blasé*, if ever you should muster up courage to go to Canada for relief, and want to see the wild horses, pray do not go towards the end of July; and if you do, don't drink iced water on board the Brothers, with the thermometer at 100° Fahrenheit, as I did, from very exhaustion. An old farmer on board cautioned me, but I was proud and thirsty, and did the deed. Sorely was it repented of; for, when we landed at night, I was seized with a violent pain in the heart region, accompanied by great uneasiness and

lassitude ; and, it was not until after lying down quietly for several hours that the symptoms abated. I was, however, very well the next day, but will not drink iced water in the dog-days any more in Canada West. Yet the Yankees do it with impunity.

We entered Lake St. Clair in a thunderstorm at half-past five, but, fortunately for us, in this shallow lake, averaging only three fathoms or eighteen feet in depth, the storm, which in other places was a tornado, did nothing but frighten us at a distance.

It tore large trees up by the roots, and unroofed houses not many miles off; and, had it caught us with so much top-hamper as the steamboat had, perhaps we should have sounded the lake *in propria persona*, without being witnesses as to its actual mysteries afterwards.

We steamed on, however, near the south shore for twenty miles, and entered the Detroit, or Narrow St. Lawrence, before the light of day had vanished, observing islands, &c., and arrived safely at Windsor, at Iron's Inn,

at ten p.m., having experienced the pleasures of an adverse gale and intense heat.

The dinner on board was by no means a luxury, for, although very good, the company was numerous, the cabin near the boiler, all the dishes smoking, the room low and small, and the thermometer as aforesaid on deck, so that we literally were steaming, for it must have been close to the boiling point.

Thursday morning, the 14th of July, was as hot as ever; and if I could, I would not have crossed over to the United States, where the famous city of Detroit stared me in the face on the other side of the river, about as broad as the Thames just below bridge.

It was, like all recent American cities, very staring and very juvenile, with large piles of brick buildings scattered amidst white painted wooden ones, and covered an immense space, with many churches, looking very fine at a distance, an immense crowd of very large, bright, white, and green, coarsely painted and loosely built steam-vessels at the wharfs, and

small, dirty, steam ferry-boats, constantly plying to and from the British shore.

Windsor is a small village, scattered, as most Canadian villages are, with a little barrack, in which a detachment of the Royal Canadian Rifle corps is stationed, to watch the frontier. The Americans are now building a large fort on the opposite side.

I left Windsor at nine a.m., in a light waggon and pair, and rolled along the bank of the river to Sandwich, the county or district town, two miles from Windsor, opposite to which the Americans are building a fortification of some size, but apparently only an extensive earth-work.

It is a very pleasant drive along the banks of the Straited River, or Detroit, close to the water, and occasionally in it, to refresh the horses. The population, chiefly French Canadians and Indians, occupy the roadside in detached farms; the Canadian huts and houses being, as in Lower Canada, invariably white-washed and planted at short intervals.

We saw the Indians both industrious and

idle: some were hoeing maize, others harvesting wheat, and the *habitants* were also very busy in the fields.

The idle Indians, the most numerous, were lounging along the banks, under the shade of melancholy boughs, as naked as they were born, bathing, smoking, or making baskets. In the intense heat I envied them, and thought of the days of Paradise when tailors were not.

We stopped in this intense heat at Maître Samondou's tavern, having passed Sandwich, which has church, chapel, jail, and courthouse, and is plentifully inhabited by French, whose domiciles evidently date from its first settlement. I saw some of the largest pear-trees here that I had ever seen; they were as big as good-sized walnut-trees in England.

We had a Yankee driver, a young fellow, whose ease and good-temper amused me very much. He had good horses, drove well, and had been in his time all sorts of things; the last trade, that of a mail-driver on the opposite shores, where, he said, the re-

public were going ahead fast, for they were copying Europeans, and had taken to robbing the mail by way of raising the wind; so that, in some place he mentioned in Pennsylvania, it was a service of danger to drive, for they fired out of the Bush and killed the horses occasionally. He told us several feats of his own against these robbers, but concluded by guessing that he should not have to carry a six-barrel Colt's revolver in Canaday; for "them French" never robbed mails.

He drove us to Amherstburgh, through a rich and beautiful grain country, in four hours, eighteen miles, and we stopped an hour at Samondson's, where nothing but French was spoken, and a long discourse held upon the crops and the state of the country. As I had an orderly with me, and as red coats had not been seen in that part of the world since the rebellion, we caused some emotion and conversation on the road. A very old, garrulous French Canadian, who was smoking his pipe in the "kitchen and parlour and hall," came and

sat by me, and, after beating about the bush a long time with all the “*politesse possible*,” at length asked me who I was, and if the army was coming back among them. I told him who I was, a lieutenant-colonel of engineers; and the old Jean Jacques, after looking at me a minute or so, got up and fetched a small glass of whiskey and water, and with the best grace in the world presented it, with a cigar, taking another of both himself, and, touching his glass to mine in true French style, bowed and said, “*A votre santé, mon colonel*; you have got a devilish good place of it!” The French Canadians on the Detroit river were all loyal during the rebellion, and this old farmer was a sample of them.

When the horses were fed, and I had, as is customary, treated the driver, we departed amidst the pleasing sounds of *Bien obligé, bon voyage*. If they had cheated me, I should have been content, so much is politeness worth; and the Canadian French peasant is a primitive being, and as polite as a baron of the *ancien régime*. It was quite refreshing

in such hot weather to meet with a little civilization, after being occasionally witness to the reverse from the newest people in the world. *Il coute si peu.*

How shocking, a sensitive *parvenu* will say, to sit down in a common kitchen, and drink a glass of whiskey and water with peasants ! It puts me in mind of a very fine young lady, whose grandfather had been a butcher, and her father none of the richest ; who, being met in the streets with some threadpapers or small package of lace in her hand early on a cold day, said, to a gentleman who stopped to ask her how she did, “ I am very well, I thank you ; but this parcel makes my hand so cold ! ” Or, for a still finer illustration, I knew a *nouvelle riche* who, not being addressed by a tradesman in a little town in his bill by a factitious title, to which she imagined that she had a right, sent back his letter open to the post-office, with an intimation to the postmaster that letters so improperly addressed would not be received.

I have always perceived that a fuss about

family and noble connections betrays either that the fuss-maker is naturally a vulgar soul, or that it is deemed necessary, from an excess of weakness, to support a position of an equivocal nature. A gentleman never derogates from his true position, let him be placed in whatever circumstances he may ; and an over-fastidious traveller, or a pretender to great importance in a new country, is the most foolish of all foolish folks.

I remember travelling once in the wild Bush with a person, who, from long-established military habits of command, thought that he could order everything as he liked. We were benighted at a farm-house, where the old lady proprietress eked out her livelihood by receiving casual visitors, but disdained the thought of “keeping tavern,” as it is called, in the backwoods of Canada West. He ordered, rather peremptorily, supper and beds for two—it would have been better that he had ordered pistols and coffee for the same number, for then the dame would have looked upon him as simply mad. No notice what-

ever was taken of his demands, but I saw her choler rising; fortunately, I knew her character. We were many miles from any habitation: and the horses jaded out as well as ourselves; so I took no notice either; but, observing the dame take her seat in the old-fashioned ample chimney, I took another opposite to her, and, observing her commence lighting her pipe, asked her for one, and we puffed out volumes of smoke—those were my smoking days—for a long time at each other in perfect silence. At last, I broke the ice.

“Mrs. Craig, your tobacco is bad; next time I come by, I will bring you some excellent.”—A gracious nod!—We smoked on, and every now and then she condescended to speak upon indifferent subjects. At last, she got up and went into another room. I followed her; for I saw she wanted to speak to me without my friend.—“Who is that man?” quoth the dame.—“Colonel So and so,” responded I.—“I don’t care whether he be a colonel or a general; all I can say is, that he has got no manners; and the devil a supper or a bed

shall he get here !”—“ Oh, my good lady,” said I, “ he is not used to travel in the Bush, and is a stranger, and not over-young, as you see ; besides, he is regularly tired out. Let me give him half my supper, and perhaps he can sleep in the chimney-corner. I don’t care about a bed myself ; pine branches will do for me, and an old buffalo robe, which I have in the waggon.”

She said nothing, but, returning to the kitchen, which is the common reception-room in country places, put a few eggs into the pot over the fire, and got the tea-pot. I saw several fine hams hanging to the rafters, so I took one down, got a knife, and was about to cut some slices to broil, when she stopped me. “ You haven’t got the best,” says the old dame ; “ I shall cut you one myself.” And so she did, spread the cloth, set two tea-cups, &c., and a capital supper we had, for a fine fowl was spitcocked.

After supper, Mother Craig asked me to smoke another pipe with her and her good man, who was lame and unable to work, and

some of her sons, &c. came in from the fields. I missed her soon afterwards; but, after a quarter of an hour, she came in again, whispered that she wanted me, and I followed her. "It is time," said the dame, "for you to go to bed; "for you must be up by candlelight to-morrow morning, as your journey is a long one; see if this will do." In an inner chamber were two beds; one a feather bed, the other a pine-branch one, with clean blankets, snow-white sheets, a night-cap of the best, water, &c. "That's your bed," said Mrs. Craig; "the other is for the colonel, as you call him. Good night; I will call you in the morning—take care, and put your candle out." I laughed in my sleeve, went out, called the colonel, who would have been otherwise left in the dark, for the family soon retired for the night, and I need not say gave him the best bed, as he thought; the best, however, I kept myself, for a bed of fresh pine shoots to a weary traveller in Canada is better than all the feather beds in the world, particularly in the New World.

So much for life in the Bush; and I was then not quite so old as at present; but, even in youth, experience had taught me the utility of taking the world easy. My friend the colonel, next morning, after a sound sleep, said, “Whenever I am obliged to travel in the Bush, I wish you may be with me;” and old mother Craig, who is now no longer in this world, thought the next morning, as she afterwards said, that, after all, the colonel was not so bad as she had imagined.

This is, for one may as well deprecate a little in talking about fastidiousness, not told by way of evincing superior knowledge of the world, but just to show you, gentle or simple reader, whichever you may be, that, in a sentimental journey through Canada, you must accommodate yourself a little to the manners and customs of the population, if you expect to get along quietly, and to form any just opinion of the country.

When we saw the naked Indians under the wide-spreading trees, literally taking their ease, *sub tegmine fagi*, I thought that, if a

Cockney could be transported in a balloon from Temple Bar right down here, what a barbarous land he would say Canada was, and his note-book would run thus : “ Landed on the banks of a river twice as broad as the Thames, and saw the inhabitants burnt brown, and stark naked, under the trees. Oh, fie !”

Really, however, there is nothing very startling in seeing a naked Indian, whether it is that the bronze colour of his red skin looks so artificial, or that white flesh is so rarely observed, except in fashionable ball-rooms, I do not know ; but I do know that I should most unequivocally feel queer, if I suddenly saw twenty or thirty naked Cockneys squatting and smoking under the trees on the banks of the Serpentine River, even if the thermometer was at 110° at the moment. Such is custom. A naked Indian looks natural, and a naked Cockney would look *contra bonos mores*, to say the least of it.

The Indian, whether dressed or undressed, is a modest man—not so always the Cockney ;

and there is an air of grandeur and natural freedom about the savage, which civilized man wants, or which modern coats, waistcoats, trowsers, and hats, are unquestionably not calculated to inspire.

Look at the statue of a Roman Consul, or at Apollo Belvidere, in his scanty clothing, and then you will understand what I mean; or, what is better, look at your grandmother's picture, with her hair powdered, stomacher, and farthingale, and then at the Venus de Medicis, and you will know better, if you are a man of taste. How the American ladies, who do not admit such words as *naked* or *legs* into their vocabulary, there being an especial act of Congress forbidding females to use them, get over the difficulty of Indians in their war costume, has puzzled me not a little. To draw a curtain before an Indian chief would be rather a venturous affair, as he is a little sensitive; and, when well painted, thinks himself extremely *comme il faut*, and very well dressed. But *de gustibus non est disputandum*, and so forth.

It is a queer country, this Amherstburgh country: French Canadians as primitive as Père Adam and Mère Eve; Indians of the old stock and of the new stock, that is to say, very few of the former, but a good many of the latter, owning both to French and to British half parentage; negroes in abundance; runaway slaves and their descendants, a mixture of all three; and plenty of loafers from the United States. In fact, it would seem as though Shem, Ham, and Japhet, had all representatives here, for Europeans and Americans of every possible caste are exhibited along this frontier, only I did not either see or hear of an Israelite; but some antiquarians contend that the Indians are a portion of the lost tribes. Their Asiatic origin is more decided. The feather of an eagle stuck in the warrior's hair is nothing more than the peacock's plume in a Tartar's bonnet. Then there is the patriarchal mode of government in the nations. Polybius says that the Carthaginians (Africans, by the way) scalped their enemies. The Kalmucks pluck

out their beards, so do the Indians. The Pottawotamies, and most of the more savage tribes, like the Asiatics, look upon women as inferior in the scale of creation. White is a sacred colour, as in many parts of Asia. An Indian never eats with his guest, but serves him. Their nomadic life, their choice of war-chiefs, the difficulty of pronouncing labials, the use of the battleaxe or tomahawk, which is absolutely Tartarian, the worship of the Good and the Evil Spirit, form other points of resemblance. West says, that the emblems of the Indian nations are similar to those of the Israelitish tribes, and the Tartars fight under *totems* of the wolf, the snake, the bear, &c., in the same way. The belief in a future state and in transmigration is similar, and the use of charms or amulets common to both Asiatics and Indians of America. The cross-legged sitting posture, and the Tartarian contour of the face and head, are very remarkable. I once saw an Indian chief, whose countenance was perfectly and purely Asiatic, and that of the Ganges rather than

Mongolian. The shaven crown and single lock of hair are Asiatic and Chinese; and tattooing is common to both sides of the Pacific. A thousand other instances may be cited; but the strongest proof of all is the discovery of vast ruins in Mexico, which, as it is well known, contain indubitable proofs of a common origin of the people who built them with the Asiatics, and these ruins extend in a line through that country from Guatemala as far almost as the Colombia River; whilst South America produces edifices, not so extraordinary perhaps, but equally evincing that the worshippers of the Sun might claim descent from the Guebres and the Parsees.

But to pursue this subject would lead me into a research which would consume both time and paper, and can only be adequately entered upon with great leisure. I have collected much upon this interesting subject, and, having bestowed great attention upon it, have not much doubt upon the matter.

Singular discoveries are occasionally made

in opening the Canadian forests, though it would seem that ancient civilization had been chiefly confined to the western shores of the Andean chain, exclusive of Mexico only. In a former volume was described a vase of Etruscan shape, which was discovered during the operations of the Canada Company, near the shores of Lake Huron, and vast quantities of broken pottery, of beautiful forms, are often turned up by the plough. I have a specimen, of large size, of an emerald green glassy substance, which was unfortunately broken when sent to me, but described as presenting a regular polygonal figure: two of the faces, measuring some inches, are yet perfect. It is a work of art, and was found in the virgin forest in digging.

But we are at Amherstburgh, otherwise called Malden, a small town of two parallel streets and divergencies, famous for a miserable fort, for Negroes, Indians, fine straw hats, wild turkeys, rattlesnakes, and loyalty.

I shall never forget the heat of this place,

having had the exceeding luxury of a sitting-room to myself, quite large enough to turn round in, with one door and one window, and a bed-closet off it, without the latter. If ever a mortal was fried without a gridiron, it was the inhabitant of that bed-closet; and right glad was I the next day to get into a gallant row-boat, belonging to the commandant of the Canadian riflemen, rowed by a gallant crew, and take the air on the River Detroit, as well as the breezes on Bois Blanc Island. Bois blanc, in Western Canadian parlance, is the white wood tree, with which this island formerly abounded, and now converted into several blockhouses for its defence.

Amherstburgh was the scene of piratical exploit during the rebellion, and bravely did the militia beat off the *soi-disant* general and his sympathizing vagabond patriots; but this is a page of Canadian history for hereafter, and need not be repeated here. The sufferers have had a monument erected to their memory in these words by the spirited inhabitants:—

This Monument is erected by
the Inhabitants of Amherstburgh,
in memory of

Thomas Mac Cartan, Samuel Holmes, Edwin Millar,
Thomas Symonds, of H.M. 32nd Regiment of Foot, and of
Thomas Parish, of the St. Thomas Volunteer Cavalry, who
gloriously fell in repelling a band of Brigands from Pelé
Island, on the 3rd March, 1838.

Many of those who escaped from this villainous aggression upon a people at peace with the United States afterwards lost their lives from exposure to cold at such a season, the coldest portion of a Canadian winter, and misery and distress were brought home to the bosom of many a sorrowing family.

The annexation of Canada was contemplated by these hordes of semi-barbarians, the offscouring of society, bred in bar-rooms. Alas! for poor human nature, should this scum ever overlay the surface of American freedom! It would indeed be the nightmare of intellect, the incubus of morality. A commonwealth well managed may be a decent government for an honest man to exist under, but a *loaferism*, to use a Yankee term, would indeed be frightful. The recklessness of life

among the least civilized portions of the States is quite sufficient already, without its assuming a power and a place.

That there is at present but little prospect for American dominion taking root in Canada, is evident to every person well acquainted with the country, although dislike to British rule and "the baneful domination" is also obvious enough among a large class of inhabitants, who are swayed by a small portion of the press, and by disappointed speculators in politics—men who have lost high offices, for which they were never fitted, either by capacity or connection with the best interests of the people, and who allied themselves to the French Canadian party merely to accomplish their own ends.

The real substance, or, as Cobbett called it, the bone and marrow of Canada, is not composed of needy politicians or of reckless adventurers, caring not whether they plunge their adopted country into all the horrors of revolution or of anarchy.

A man possessing a few hundred acres of

land, with every comfort about him, paying no taxes but those for the improvement of his property, feeling the government rein only as a salutary check to lawlessness, and looking stedfastly abroad, is not very likely, for abstract notions of right and equality, to sacrifice reality, or to suppose that Mr. Baldwin, amiable as he is, is infallible : whilst Mr. Baldwin himself, the ostensible, but not the real leader of the out-and-out reformers, will pause before he even dreams of alienating the country in which he, from being a very poor man originally, has, through the industry and talent of his father, and a fortuitous train of circumstances, connected with the rise and progress of the city of Toronto, and the rise of the price of land as Canada advances in population and wealth, become a great landholder.

I have no idea that this Corypheus of Canadian reform has the most remote idea of annexing Canada to the United States, or that he is mentally fighting for anything more than an Utopia similar to that of O'Connell

in Ireland. In short, the grand struggle of the radical reform party of Upper Canada has been, and for which they joined the French Canadian party, to have a repeal of the union as far as control over the provincial funds and offices exists, on the side of England.

They would have no objection to see a British prince on the Canadian throne, or a British viceroy sitting at the council board of Montreal, but they want to be governed without the intervention of the colonial office; and perhaps, rather than not have the loaves and fishes at their own entire disposal, they would in the end go so far as to desire entire separation from the Mother Country, and seek the armed protection of that enormous power which is so rapidly rising into notice on their borders.

But then they calculate—for there is a good sprinkling of Jonathanism in their ranks—that that enormous power is grasping at too much already, defying the whole world, and seeking to establish a perfectly despotic dominion itself over the whole continent which

Columbus and Cabot discovered, and not excluding the archipelago of the Western Indies.

They live too near the littorale of the Republic, or rather the democracy of America, not to see hourly the effects of Lynch law and mob rule; and, however some of the most daring or reckless among them may occasionally employ that very mob rule to intimidate and carry elections, they very well know that the peaceable inhabitants of both Canadas are too respectable and too numerous to permit such courses to arrive at a head. Once rouse the yeomanry of Canada West, and their energies would soon manifest themselves in truly British honesty and British feeling. John Bull is not enamoured of the tender mercies of canallers and loafers, and the French Canadian peasantry and small farmers are innocent of the desire to imitate the heroes of Poissardism.

No person in public life can judge better of the feelings of the people as a mass, in Canada, than those who have commanded large bodies of the militia. Put the query to

any officer in the army who has had such a charge, and the universal answer will be : “ The militia of Canada are loyal to Britain, without vapouring or boasting of that loyalty ; for they are not by natural constitution a very speaking race, or given at every moment to magnify ; but they will fight, should need be, for Victoria, her crown, and dignity.”

It may be said that an officer in the army is not the best judge of the feelings of the people, as they would not express them in his presence ; but when an officer has been intimately mingled with them by such events as those of the troubles of 1837 and 1838, and has so long known the country, the case is altered ; he comes to have a personal as well as a general knowledge of all ranks, degrees, and classes, and can weigh the ultimate objects of popular expression. I have no hesitation in saying, possessed as I have been of this knowledge, that *the people* of Canada have not a desire to become independent now, any more than they have a desire to be

annexed to and fraternize with the United States.

Many years ago, on my first visit to Canada, in 1826, when such a thing as expressions of disloyalty was almost unknown, and long before Mackenzie's folly, I remember being struck with the speech at a private dinner party of a person who has since held high office, respecting the independence of Canada : he observed that it must ultimately be brought about. The colony then was in its mere infancy, and this person no doubt had dreams of glory, although in outward life he was one of the most uncompromising of the colonial ultra-tories.

Just before the rebellion broke out, I was conversing with another person, now no more, of a similar stamp, but possessing much more influence, who began to be alarmed for his extensive lands, all of which he had obtained by grants from the Crown, and he feared that the time specified by the first-mentioned person had arrived. His observations to me were revelations of an astounding nature ; for he

thought that we were too near a republic to continue long under a monarchy, and that, in fact, absurd titles, such as those borne by the then governor, Sir Francis Head, alluding to his being merely a knight bachelor, were likely to create contempt in Canada, instead of affection. My friend, who, like the first-mentioned, was rather weak, although acute enough when self-interest was concerned, was evidently casting about in his mind's eye for a new order of things, in which to secure *his* property and *his* official influence.

Lord Sydenham and Lord Durham saw and knew a great deal of this vacillation among all parties in Canada. They saw that the great game of the leaders was office, office, office; and when Lord Metcalfe had had sufficient time to discover the real state of the country, he saw it too. Hence arose the absolute necessity for removing the seat of government from Toronto to Kingston. The ultra-tories were just as troublesome as the ultra-levellers, and it was requisite to neutralize both, by getting out of the sphere of

their hourly influence. The inhabitants of Kingston, a naval and military town, whose revenues had been chiefly derived from those sources, were loyal, without considering it of the utmost consequence that their loyalty should form the basis of every government, or that the governor was not to open his mouth, or use his pen, unless by permission. They were the true medium party.

Then arose the desire to do justice to the Gallo-Canadians, who had before been wholly neglected, and looked upon as too insignificant to have any voice in public affairs, whilst they were mistrusted also, owing to the Papi-neau demonstration.

The British government, superior to all these petty colonial interests, saw at once that to ensure loyalty it was only proper to administer justice impartially to all creeds and to all classes, and that the French Canadians, whose numbers were at least equal to the British Canadians, had a positive right to be heard and a positive claim to be equitably treated.

There was no actual innate desire in the Canadian mind to shake off the British domination for that of the democracy of the United States. An absurd notion had gathered strength in 1837 that they were at last powerful enough to set up for themselves, to constitute *la Nation Canadienne*, forgetting that Great Britain could swallow them up at a mouthful, and that the Americans would, if John Bull did not. The proclamation of General Nelson or Brown, or some such patriot, set the affair in its true point of view. No longer any religion was to be predominant; the feudal laws were to be abolished; and the celebrated ninety-two resolutions, which had cost Papineau and his legion so much care and anxiety, were swept away as if they were dust. A Jack Cade had started up, whose laws were to be administered at the point of the bayonet.

The eyes of the leading French Canadians, gentlemen of education, were soon opened, and the vision of glory evaporated into thin air. But still they felt themselves oppressed, they

enjoyed not the coveted rights of subjects of England; and accordingly the successive governments of Lord Durham, Lord Sydenham, and Sir Charles Bagot were eras of political struggles to obtain it.

Lord Metcalfe had had experience in colonies of long standing, had been successful, bore the character of a just, patient, and decided man, and had wealth enough to cause his independence to be respected.

The fight for supremacy between the ultra-tory and ultra-radical parties became fiercer and more fierce, and it was dolefully augured that the province was lost to England, as he would not yield to the haughty demands of the first, nor to the threats and menaces of the latter.

When the Baldwin ministry was dismissed, even cautious people were heard to say, that new troubles were at hand; and the ultra-tories did not scruple to avow that the country was in danger, unless they were readmitted to power.

Placed between these belligerents, Lord

Metcalfe, who kept his own counsel to the last secret and undivulged, steered a course which has hitherto worked well. He chose a medium party, and removed the seat of government to Montreal, not in the heart of French Canada, as it is supposed in England, but within a few miles of British Canada and close to the eastern townships, where a British population is dominant, whilst in the city itself British interests surpass all others; it being the heart and lungs of the Canadian mercantile world, whilst it has the advantage of easy steam communication with Quebec, the seat of military power, and with Upper Canada, both by the St. Lawrence and the Rideau Canals.

The French, no longer neglected and seeing the seat of government permanently located in their country, seeing also that they had been admitted to share power and office, have been tranquillized; and the result of the elections placed Lord Metcalfe comparatively at ease, and rendered the task of his successor less onerous. Had his health been spared,

the blessing of his wise rule would long have been felt. He is deeply and universally regretted throughout Canada.

As a proof of the loyalty of the Canadians, it is right to mention that, whilst I am penning these pages, the press is teeming with calls to the volunteers and militia to sustain Britain in the Oregon war; and, because the militia is not prematurely called out, the administrator of the government is attacked on all sides. Whilst I am writing, the Hibernian Society, in an immense Roman Catholic procession, passes by. There are four banners. The first is St. Patrick, the second Queen Victoria, the third Father Matthew, the fourth the glorious Union flag. Reader, it is the 17th of March, St. Patrick's Day, and the band plays God save the Queen!

CHAPTER XVI.

The Thames Steamer—Torrid Night—"The Lady that helped" and her Stays—Port Stanley—Buffalo City—Its Commercial Prosperity — Newspaper Advertisements — Hatred to England and encouragement of Desertion—General Crispianus — Lake Erie in a rage—Benjamin Lett—Auburn Penitentiary—Crime and Vice in the Canadas—Independence of Servants—Penitentiaries unfit for juvenile offenders—Inefficiency of the Police—Insolence of Cabmen —Carters—English rule of the road reversed—Return to Toronto.

The heat at Amherstburgh was so desiccating, that I was glad to leave even my urbane host, serjeant-major as he had been of a royal regiment, and his crowded though clean and comfortable inn, for the spacious deck of the splendid Canadian steamer Thames, Captain Van Allen, on board of which was to be enjoyed the absolute luxury of a spacious

state-room upon deck. Alas for the roomy state-room ! even in its commodious berth, rest could not be enjoyed, for the night was a torrid one ; nothing in the Western Indies could beat it, only there was no yellow fever, although plenty of yellow countenances presented themselves on the shoulders of Americans from the South, and coloured waiters ; but that which actually at last put me in a fever was the sight of the female attendant of the ladies' cabin, whose form was so buckled up in stays of the most rigid order, that the heat, American-bred as she was, appeared to have rendered her a Niobe, for she was tall and as straight as a poplar-tree, and much of the colour of its inner rind. Oh ! the heat, the intolerable heat, on Lake Erie that night ! The worthy captain declared he had never experienced its like, and that as for rest it was impracticable. If the lady's-maid, or " the lady that helped " in the ladies' cabin, as she is called in American boats, kept her stays on that night, Heaven help her ! She must have been in a greater state of despair

than the man in armour on Lord Mayor's day, who requires to go to bed after a warm bath, the moment he takes his stays off.

But we steamed on, and the boilers themselves were not a whit hotter than we were. How the stokers stood it is a marvel to this day. I suffered dreadfully with the prickly heat, as if in the West Indies.

The Thames is the most splendid boat on Lake Erie, and that is saying a good deal; for the Americans have so many, and several so much larger than this Britisher, that it is a matter of surprise that she should beat them all in convenience, build, and speed; and yet, according to received opinion, the Yankee builders of vessels excel us "by a long chalk," to use a Yankee figure of speech. It is so, however, and is so acknowledged on both sides of the water, that the Thames, Captain Van Allan, takes the shine out of them all.

We started from Amherstburgh, where she called on her way from Detroit, and left Bullock's inn for the steamer which was close

at hand, at nine o'clock p.m., and got under steam and travelled all night at a most rapid rate, nor stopped until eight a.m., the next morning, at Port Stanley, formerly called Kettle Creek, a small village with a fine parallel pier harbour, which, unlike Amherstburgh, has thriven amazingly during the past seven years, before which I recollect it to have consisted of about three or four houses. It is now a thriving village; and, as it has a planked road reaching far into the interior, is every day going ahead. The plank road leads to London, twenty-six miles distant. The piers of this artificial harbour are much too narrow, consequently it is dangerous to approach in stormy weather; and, as Lake Erie is a very turbulent little ocean, they must be modified some day or other, whenever the Board of Works is rich enough.

We took in several passengers here, mostly Americans touring, and the vessel was now full, for we had a large proportion of the same class from Detroit. They were chiefly people from the hotter regions of the States;

and resembled each other remarkably ; sallow, sharp-angled, acute-looking physiognomies : the men tall and loosely jointed ; the women prematurely old, and not very handsome. They were quiet and respectable in their manners and demeanour ; in fact, too quiet, contrasting strongly in this respect with the real, genuine Yankee.

We reached Buffalo at seven in the evening, after encountering a thunderstorm, which appeared to be very severe towards the shores of the American side of Lake Erie.

Such a mob as poured on board the vessel, after she had with much difficulty threaded the inconvenient, narrow, muddy creek on which Buffalo is located, I never beheld before : blacks and whites, browns and yellows, cabmen and carters, porters and tavern-scouts, pickpockets and free and enlightened citizens.

How the passengers got their baggage conveyed to their hotels, or dwellings, is beyond my art to imagine. Insolent and daring, if these be a pattern mob, Heaven defend us Britishers from democracy ! for freedom reigns

at Buffalo in a pattern of the newest, which the seldomer copied the better. But one must not judge the money-getting citizens of this fine town by the scenes in the Wapping part of it; for, if one did, it would necessarily be said that they were not an enviable race.

Buffalo, a mere wooden village, burnt during the war of 1812, is now a large and flourishing city, containing 30,000 inhabitants; and, if it had a good harbour, would soon rival New York. To prove this, I beg the reader to take the trouble to peruse the accompanying statement of the present commerce of that city, from the Buffalo Commercial Advertiser of January 10, 1846, by which it will be seen that in the year 1845 the increase of vessels trading with it was enormous, and that by the Welland Canal, or an American ship canal, round the Falls of Niagara, they already contemplate a direct trade with Europe in British bottoms.

“ There has been a prodigious accession to the Lake marine during the past season—no less than sixty vessels, whose aggregate ton-

nage is over 13,000 tons, and at an outlay of 825,000 dollars. Had we not the evidence before us, the assertion would stagger belief.

“ More than usual pains were taken by us, during the past season, to procure information on this head and others touching thereto, the result of which we now present in our annual list of new vessels. This season we have ventured beyond the immediate margin of Lake Erie, and those other broad lakes beyond, to Lake Ontario, a knowledge of whose marine is now deemed essential to a thorough understanding of our lake matters.

NUMBER, TONNAGE, AND ESTIMATED COST OF NEW VESSELS
BUILT IN 1845, FROM THIS CITY WESTWARD TO CHI-
CAGO.

Buffalo	...	30	New Buffalo, Mich.	1,000
Total, 48 vessels		10,207		659,000

“During the past season we stated that there was employed on the lakes a marine equal to 80,000 tons; we have assurance now that even that large estimate was below the reality. The latest returns to Congress, in 1843, gave 60,000 tons; but, as those documents are always a year or two behind the reality, and embrace dead as well as living vessels, they are of very little consequence. The existing and employed tonnage is what is most desired. The subjoined shows the number, class, tonnage, and cost of vessels built on this and the other upper lakes during the past five seasons. By adding the cost of annual repairs and money expended in enlarging and re-modelling vessels, the sum would reach

2,500,000 dollars. The total number of vessels built during that period is 179.

	Steamers.	Prop'rs.	Sail.	Tons.	Dollars.
1845	13	4	32	10,207	659,000
1844	9	none	34	9,145	548,000
1843	6	4	23	4,830	336,000
1842	2	none	23	3,000	164,000
1841	1	none	28	3,530	173,000
Total	31	8	140	30,302	1,880,000

“ The whole of the above vessels were built above the Falls, at places between this port and Chicago, by capital drawn from the many sources legitimately pertaining to the lake business, and designed as a permanent investment. What has been done below Niagara, in the same field, during the past season, may be seen in the subjoined list of

VESSELS BUILT ON LAKE ONTARIO, 1845.

Syracuse	propeller	315	Oswego, N. Y.
H. Clay	...	300	Dexter, do.
Hampton	brig	300	Pt. Peninsula, do.
T. Wyman	...	258	Oswego, do.
Algomah	...	335	Cape Vincent, do.

Crispin	...	151	ditto
Liverpool	...	350	Garden Is., C.W.

Quebec	brig	280	Long Island, C.W.
H. H. Sizer	schooner	242	Pillar Point, N. Y.
Maid of the Mill	...	200	Oswego, do.
Milan	...	147	Pt. Peninsula, do.
H. Wheaton	...	200	Oswego, do.
Welland	...	220	ditto
Josephine	...	175	ditto

Total 15 vessels, 3,787 tons.

To which must be added the schooner J. S. Weeks, rebuilt and enlarged at Point Peninsula, at a heavy outlay ; and also the schooner Georgiana Jenia, at St. Catharine's, which was cut in two, and rebuilt. The Josephine and Wyman are rebuilds, but so thoroughly as almost to fall within the denomination of new craft. The Wyman is polacca-rigged, the only one in service, we think. The Algomah is full rigged, and, like the others, very strongly built. The Quebec and Liverpool are also well ironed, and designed for Atlantic service, when the St. Lawrence locks will admit of a free passage.

“There have been built on the lower lake other vessels than those embraced in the above list, including some steamers ; and, in order

pulse, and now presents one of the leading characteristics of investment in our inland trade. The sum of 1,000,000 dollars has been diverted from other channels of business to this branch within the past two years, in addition to a very large outlay in sail vessels; and as the wants of commerce develop, some marked changes may be observed. The small, or medium-sized boats, into which the merchant farmer and foreign immigrant were indiscriminately huddled, have given place to capacious, swift, and stately vessels, in which are to be found a concentration of all that is desirable in water conveyance. Such is now the characteristic of steamboat building on the western lake.

“The following is the number and value of vessels owned and exclusively engaged in the trade of Upper Canada in 1844:—

	Dollars.
51 Steamers valued at . . .	1,220,000
5 Propellers . . .	46,000
80 Sail Vessels . . .	114,000
<hr/>	
Total, 136 Vessels	1,380,000
Having employed thereon 3,000 men.	

“The whole number of men employed between Buffalo and Chicago is estimated at about 5,000. During the season of non-navigation, half of these are employed upon farms in Ohio.

“Demonstrable evidence from many sources is at command to show the progressive change and accumulative power of the lake trade. In 1827, a steamer first visited Green Bay, for government purposes, and the Black Hawk war in 1832 drew two boats to Chicago for the first time. Now the trade of the latter place, in connexion with the business growing out of the rapid settlement of Wisconsin, sustains a daily line. A glance at the trade of Chicago for last year will illustrate the change that has taken place there.

“The gross tonnage of the lakes above the Falls, in 1845, was 100 vessels and 80,000 tons. This spring it will be found to have augmented from 5,000 to 10,000 tons.

“In 1845, the whole number of arrivals at the port of Buffalo was 1,700. Last season, 1,320 entries were made at Chicago. The

Illustrations of the most ridiculous kinds show that newspaper advertisements must be very cheap indeed, for everything literally, from a washing-tub to a steamboat, is advertised daily for sale at Buffalo.

Buffalo is a sample city of the lake frontier of the United States, better than Rochester, a more manufacturing mill-power place; a specimen of what enterprise, energy, and paper money credit can do: a specimen of

the border population, where hatred to England reigns supreme among the lower classes, and where a residence of six months would quite cure any English ultra-radical destructive of good education; an ultra-radical destructive of no education, or half educated, would, however, be vastly improved.

I had a soldier with me, and he asked leave to go on shore, which I freely granted, convinced, from what I knew of him, that he was proof against Buffalonian eloquence. He had scarcely stepped out of the vessel, on the wharf, in plain clothes, before he was hailed by a deserter, who was doing duty as a porter to some shopkeeper, and told of the delights of liberty and independence; but the porter had left the regiment for a little false estimate of the words *meum* and *tuum*, and therefore the old soldier declined turning from the carrying of Brown Bess¹ to being a beast of burden. He was then assailed by a sergeant, who had been obliged to desert for misconduct in a pecuniary point of view, and shown into a

¹ Brown Bess, a musket—*vide Infantry Dictionary*.

little grog-shop on the quay, that he was keeping ; but appearances were here not very flattering either : in short, the deserter is not at a premium in the United States, for he is always suspected. Strange to say, these men are occasionally enlisted in the regular American army ; a proof of which was witnessed last winter at Sackett's Harbour, where some of our officers from Kingston saw a man who had been received, and who had deceived all the American officers, except the surgeon. This gentleman, suspecting he was not a free and enlightened citizen, although he assumed the drawl and guess, suddenly said to him, " Attention !" upon which the deserter immediately dropped his hands straight, and stood, confessed, a soldier.

It would appear that in peace-time deserters should not be received into the ranks of a friendly power. Even in war, they are received by European nations with difficulty and distrust ; for a man who once voluntarily breaks his oath and casts off his allegiance is very likely to be a double traitor.

The deserters from the regiments stationed in Canada frequently apply to be received back, but it is a rule to refuse them ; and very properly so.

It is incredible what pains are taken on the frontier, by the loafing population from the States, to persuade the young soldiers to desert ; and that, too, without any adequate prospect of benefit, but merely out of hatred, intense hatred, to England ; for they soon leave the unfortunate men, who usually are plied with liquor, to their fate, when once in the land of liberty ; and this fate is almost invariably a very miserable one.

The soldier I had with me told me that, while we were at the Falls, a man made up to him at the hotel, for he was then in uniform, being on the British side, and introduced himself as a general, saying that he was surprised he could remain in such a service, and volunteered to place him in their army, which he laughed at, and told him he preferred Queen Victoria's. This man he described to me as a gentleman, in his dress and manner ;

but, if he was a general, he was certainly a militia one, for the regular generals are not very plenty ; and, from what I have heard of them, are above such meanness.

We had a military general, who is, I believe, a shoemaker of Buffalo or of New York, at Kingston last winter, who gave out that he had crossed over the ice to see if it was true that fortifications were actually in progress at Kingston. He met a keen young gentleman, who was determined to have a little fun with General Crispianus, who was attired in a fine furred, frogged, winter coat, and pointed Astracan cap, with a heavy tassel of silk.

“So you are at work here, I guess?”

“Yes,” said the young gentleman, “we are.”

“Well, I do hope you will be prepared in Kanaday, for though we don’t approve some of our president’s notions, we shall sustain him to a man ; and, as soon as ever war is declared, we shall pour two or three hundred thousand men into your country and annex it.”

“Oh, is that all!” replied the youth; “I advise you then, general, to take care of yourself, for we expect sixty thousand regulars from England.”

“I didn’t hear that before,” said General Crispianus; and no doubt he returned to his last somewhat discomfited. *Ne sutor ultra crepidam.*

Before his departure, however, he went to see a newly invented pile-driver, which was at work, and, after looking at the *monkey* for some time, which was raised and lowered by two horses, and drove the piles very quickly, with enormous power, he said to his friend suddenly, “Waal, I swar, that does act sassy.”

So much for General Crispianus.

We passed the night aboard of the Thames, preferring her spacious accommodations to those of the hotels in such a hot season, when the rain poured in torrents; but sleep was out of the question, for the climate of Sierra Leone could scarcely be more insufferable than the atmosphere then and there.

The rain cleared away in the morning, and

a prospect of Lake Erie in a rage presented itself; so we could not quit the miserable apology for a harbour which Buffalo Creek affords, crowded, narrow, and nasty, until half past nine, and then, with great difficulty, on board the Emerald, a small Canadian steamboat, worked out amidst a string or maze of all sorts of merchant-craft.

Lake Erie presented an appearance exactly like the shallow sea, green and foamy, and very angry; and, in passing the shoals at the entrance of the Niagara river, it rolled the boat so that there was some danger; and one old lady vowed that she would never quit the United States any more.

A nice comfortable-looking Massachusetts farmer, the very type of a Buckinghamshire grazier of the year 1800, who was her husband, took a fancy to me because I was endeavouring to assure his old dame that she was not in real danger, and told me various stories, for he was very loquacious.

Among other things, he said it was very disgraceful to the Buffalonians to allow such

a miscreant as Benjamin Lett, whom we saw on the wharf, be at large, as he boasted of having blown up Brock's monument, and of shooting Captain Ussher in cool blood at his own door in the night, long after all the disturbances of the insurrection were over. Lett seemed to glory in his villanies, and was a disgusting-looking loafer, for whose punishment the laws of the United States have proved either too lenient or totally inadequate. This fellow escaped when heavily ironed by jumping out of a rail car on his way to the Auburn Penitentiary, and no doubt has many admirers.

The good farmer told me that he had been to see Auburn, and that there was a little boy confined there for setting fire to a barn. He was only eleven years of age, and had been hired for half a dollar by a ruffian to do the deed.

But Auburn (what a misnomer for a penitentiary establishment, enough to make poor Goldsmith shiver in his shroud !) is not the only penitentiary in America where children

expiate crime. Kingston in Canada can show several examples, among others, three brothers; and it appears to me that a better system is required in both countries. A house of correction for such juvenile offenders would surely be better than to mix them in labour with the hardened villains of a penitentiary. It is, in fact, punishing thought before it has time to discriminate, and the consequence is that these children return youths to the same place, and when they again leave it as youths, they return as men, for their minds are then callous.

The penitentiary system in Canada is undergoing a strict trial.

It will surprise my readers to state that, in an agricultural country, where the manners of the people are still very primitive, where education is still backward, and civilization slowly advancing, out of a population of about 1,200,000, scattered widely in the woods, there should be so large a proportion as twenty women, and five hundred men, in the Kingston Penitentiary; for, as education and

civilization advance, and large towns grow up, new wants arise, and evil communication corrupts good manners, so that the proportion of great crimes between an old and a new country is much in favour always of the latter.

Recent discoveries of the police in Montreal have shown that *hells* of the most atrocious character, and one in imitation of Crockford's, as far as its inferior means would go, have been found out.

At Kingston a most wretched establishment of the same nature has recently been broken up, and at Toronto great incentives to vice in the very young exist.

Clerks in banks have gambled away the property of their employers in these places to the amount of several thousands, and, the frontier of the United States being so near, they have fled as soon as discovery was apprehended, but, owing to the international arrangements for the arrest of such criminals, have hitherto been detected, and consigned to the laws of their offended country.

The spirit of insubordination, which so forcibly operates in uneducated minds, where the constant example of the excess of freedom in the neighbouring States is ever present, has much changed the aspect of society in all the large towns and villages of Western Canada. There is no longer that honest independence of the working and labouring classes which existed fifteen years ago ; but impudent assumption has forced its way very generally, and among servants more particularly. If they are not permitted to make the kitchen a rendezvous for their friends, to go out whenever they like, and in fact to be masters and mistresses of the habitation, they immediately, and without warning, leave, and no laws exist to prevent the growing evil : the consequence is that household economy is every where deranged, and a *place*, as it is called, is only good where high life below stairs is freely permitted.

The servants too are chiefly Irish, who have neither means nor inclination for settling in the forest, and consequently there is little or

no competition, while they are so well known to each other, and so banded in a sort of Carbonari system, that it is extremely difficult to replace bad ones, even by worse.

The women servants are the worst. I saw an instance lately however of a precocious young villain of twelve, who was footboy in a gentleman's family, and his young sister, not fourteen, under-housemaid. His mother, a widow in infirm health, recently imported from Dublin, had brought up her children well, as far as reading and writing went, but had indulged them too much, and beat them so much, that they neither loved nor feared her. The little boy, only twelve, got into bad company, and ran away from his place, where he was well fed, well clothed, and kindly treated, and took his livery with him. He was brought back, after being partially frost-bitten, by his uncle, and received again from mistaken kindness. A cook of bad habits and worse temper got hold of him, and, after staying a short time, he again deserted with all the clothes and things he could carry. A young lady in the

family had previously told him that her father would one day take him to the penitentiary to show him what bad boys came to. "That is the very place I want to get into," said the young ruffian, "for I hear there is fine fun there; I will steal something by and by, and then they will send me there."

Accordingly, he did steal, and took French leave one fine morning with Madam Cookey, having previously strangled the young lady's favourite cat, just about to kitten, and having the night before he absconded told the young lady he had made a famous nest for pussy to kitten in, and that if she went to the cellar in the morning, she would find the cat on her nest.

The young lady thought nothing of what he said at the moment, but, after finding when the family got up that the cook and boy were off, she went to look at her kittens, found the cat strangled, frozen, and placed on the nest. A day or two afterwards, the little sister decamped with three suits of dresses. Now what use would there be in putting such

a boy or such a girl at so tender an age, and with such principles, into a penitentiary ?

Penitentiaries are not proper receptacles for infant villains. The very contagion of working with murderers, coiners, horse-stealers, and scoundrels of the deepest dye is enough alone to confirm their habits and inclinations ; and I am not aware of any instance of an infant boy or girl coming out of the Kingston Penitentiary subdued or improved. They are more marked characters when they again join their former friends ; for they seldom avoid their former haunts and those whose example first led them astray, but plunge again and again deeper into crime.

It is the same with beating a child to excess ; spare the rod and spoil the child, says the Jewish lawgiver ; but where slavery does not exist, the rod is not to be used to that extent, and it does not improve even slaves. No ; as in the army and in the navy, it hardens culprits, and very seldom indeed acts upon their consciences.

Border population is usually of a low cha-

racter, and I cannot think it can be worse anywhere than where the maritime, or rather *laculine*, if such a word is admissible, preponderates, and where that race are unemployed for at least five months of the Boreal winters of Canada. It is only a wonder that serious crime is so infrequent. Burglary was almost unknown, as well as highway robbery, until last year; but instances of both occurred near Toronto, and the former twice at Kingston. The only use to such a class that a war could be of would be to employ them; but it is to be predicted, if peace exists much longer, that the civil and criminal jurisprudence of towns and cities bordering on the great lakes must undergo very great revision, and a suitable police be employed in them.

Nothing can, by any possibility, be more eminently absurd than the police of Kingston as at present constituted. These men are dressed like officers in the army; and, instead of being in the streets to prevent accident or crime, are employed, as they say, hard at

work, detecting the latter. How they do now and then, at intervals few and far between, succeed in detecting an unhappy loafer is a mystery to everybody, for they are usually observed on the steps of the Town Hall, or carrying home provisions from the market, with a fine dog following them, or else jaunting about in cabs or sleighs.

London is said to have suffered much by the policemen finding their way down the area steps of houses, and amusing themselves in cupboard courtships with the lady-cooks, housemaids, and scullions; but I verily believe Kingston has not arrived at that perfection of a domestic police, for most of the men are middle-aged and married.

The cabmen and carters of Kingston, it is said, elect the Aldermen and Common Council. Whether this be true or false, I cannot pretend to say, but it is very certain that a more insolent, ungoverned race than the cabmen do not exist anywhere. The best position of the best promenade is occupied by these fellows; and no respectable female or timid man dares

to pass them without receiving coarse insult; and, if complaint is made, they mark the complainant; and, if they keep a sleigh or carriage, make a point of running races near them, and cracking heavy whips to frighten their horses. One of these ruffians frightened a gentleman's horse last winter, and threw him, his wife, and daughter on the pavement, in consequence of the animal running away, and overturning the vehicle they were in. They know all the grooms and servants, and act according as they like or dislike them, caring very little what their masters hear or see. The 'carters are somewhat better, as there are decent men among them; but many of that body care very little about the laws of the road, which, by the by, are different here from those at home.

If you go left you go right,
If you go right, you go wrong,

is reversed in Canada, the right side of the road being always the driving side in both provinces; thus, if you go right, you do not

go wrong; although such a manifest advantage in ethics, it will appear that right is not always right in Canada, but that cabmen's right and carters' right confer degrees in the Corporation College, which ensure a large share of wrong to the public.

But they are going to change all this, and bring in an Act of Parliament to alter the constitution of the fathers of the city of Regiopolis, who, it appears, have not hitherto rendered any account of their stewardship.

I shall not now enter into any further recapitulation of the journey from the Falls of Niagara to Toronto, or from Toronto to Kingston, save to say that some very intelligent citizens of the United States from Philadelphia were my companions on board the splendid British mail-packet, City of Toronto. The ex-Mayor of Philadelphia and his two amiable daughters were of the party, and I much question whether we could have had a more pleasant voyage than that which terminated on the seventeenth day of July. I omitted to observe, that voyage from

Buffalo to Toronto was performed in eight hours and a quarter, as follows: Buffalo to Chippewa, by Emerald steamer, one hour and a half; Chippewa, by horse-car railway, to Queenston, one hour and a quarter; Queenston, by Transit steamer, to Toronto, four hours and a half, including all stoppages and detentions, among which was that of upwards of an hour at Queenston, waiting for the boat. The distance is about seventy miles; and the actual rate of going, for none of the conveyances are very rapid ones, is about ten miles an hour.

Kingston is one hundred and eighty-nine miles from Toronto by land, and one hundred and eighty by water; and the journey is performed in the mail-packets, which stop at several places occasionally, in eighteen hours, or about ten miles an hour, with detention for taking in wood, the speed averaging eleven.

CHAPTER XVII.

Equipage for a Canadian Gentleman Farmer—Superiority of certain iron tools made in the United States to English—Prices of Farming Implements and Stock—Prices of Produce—Local and Municipal Administration—Courts of Law—Excursion to the River Trent—Bay of Quinte—Prince Edward's Island—Belleville—Political Parsons—A Democratic Bible needed—Arrogance of American politicians—Trent Port—Brighton—Murray Canal in embryo—Trent River—Percy and Percy Landing—Forest Road—A Neck-or-nothing Leap—Another perilous leap, and advice about leaping—Life in the Bush exemplified in the History of a Settler—Seymour West—Prices of Land near the Trent—System of Barter—Crow Bay—Wild Rice—Healy's Falls—Forsaken Dwellings.

“A truant disposition” took me into another district on my return to Kingston, as I was thoroughly determined to see a thoroughly new Canadian settlement, and therefore prepared, by purchasing a new waggon and a new pair of horses, to start for Seymour West, in the Newcastle district, some

120 miles north-west, and upwards of twenty miles in the Bush from the main stream of settlement, where a young friend was beginning life, for whom the horses, waggon, and sundry conveniences for farming and a few little luxuries were intended.

A waggon, dear settling reader, in Canada, is not a great lumbering wooden edifice upon four wheels, whose broad circumferences occupy about four feet of the road, and contain some ton or two of iron, as our dear Kentish hop-waggon is wont to show in the Borough of Southwark, or throughout lordly London, those carrying coals. No, it is a long box, painted green or red, a perfect parallelogram, with two seats in it, composed of single boards, and occasionally the luxury of an open-work back to lean against; which boards are fastened to an ash frame on each side, thus affording an apology for a spring seat. This is the body; the soul, or carriage, by which said body is moved, consists of four narrow wheels, the fore pair traversing by a primitive pin under the body, the hind pair attached to

the vehicle itself. A pole, or, as it is called, a tongue, projects from the front, and can be easily detached; *et voilà tout!* The expence is sixteen pounds currency, or about twelve sterling for a first-rate article, with swingle bars, or, as they are always called here, “whipple-trees,” to attach the traces to. A set of double harness is six pounds, and two very good horses may be obtained for thirty more, making in all fifty-two pounds Canada money, or a little more than forty sterling, for an equipage fit for a gentleman farmer’s all work, namely, to carry a field, or to ride to church and market in.

There are two or three other things requisite, and among the foremost a first-rate axe. No man should ever travel in Canada without an axe, for you never know, even on the great main roads, when you may want it to remove a fallen tree, or to mend your waggon with. A first-rate axe will cost you, handle and all, seven shillings and sixpence currency, but then it is a treasure afterwards; whereas, a cheap article will soon wear out or break.

Strange to say, Sheffield and Birmingham do not produce coarse cutting tools for the Canada market, that can compete with the American. It has been remarked, of late years, that even all carpenters' tools, and spades, pickaxes, shovels, *et id genus omne*, are all cheaper, better, and more durable from the States, than those imported from England. Let our manufacturers at home look to this in time, and, eschewing the spirit of gain, cease to make cutting tools like Peter Pindar's razors. In the finer departments, such as surgical and other scientific instruments, Jonathan is as far astern; and, although he may use a sword-blade very well, he has not yet made one like Prosser's.

In heavy ironwork Jonathan is advancing with rapid strides; and even the Canadian, whom he looks down upon with some contempt, is competing with him in the forging and casting of steam-engines. There are very respectable foundries at Kingston, Toronto, Niagara, and Montreal. The only difficulty I have yet heard of is in making

large shafts. Every other kind of heavy iron or steel manufacture can now be rapidly and better done in Canada than in the United States—I say advisedly *better* done, because the boilers made in Canada do not burst, nor do the engines break, as they do in the charming mud valley of the Mississippi. For one accident in Canada there are five hundred in the States; in fact, I remember only one by which lives were lost, and that happened to a small steamer near Montreal, about four years ago; whereas, they go to smash in the Union with the same go-ahead velocity as they go to caucus, and seem to care as little about the matter. John Bull often calculates much more sedately and to the purpose than his restless offspring, who seem to hold it as a first principle of the declaration of independence that a man has a right to be blown up or scalded to death.

They are as national in this as in naming new cities. What names, by the by, they do give them!—think of *Alphadelphia* in

Michigan, Bucyrus in Ohio, *Cass*-opolis, from, I suppose, General Cass, in Michigan, Juliet in Illinois, Kalida (it ought to be Rowland Kalydor) in Ohio, Milan in Ohio, Massilon in Ohio, Peru in Iowa, Racine in Wisconsin, Tiffin in Ohio, and Ypsilanti in Michigan. Cæsar, Pompey, Cassius, Brutus, Homer, Virgil, and all the heathen gods, goddesses, demi-gods, and republicans, are sown as thick as leaves in Vallombrosa.

But to return to farming. You may have a plough, of the hundred new Yankee inventions, or of a good substantial Canadian cut, for six dollars, a wheat cradle scythe for the same, complete, a common scythe for ten shillings, or less; and thus for less than one hundred pounds, the farm may be stocked with two horses, two bullocks, two cows, (a good cow is worth five pounds) pigs, and poultry. Sheep you must not attempt, until a sufficient clearance of grazing ground is completed, but you can buy as many there as you want, of the very best kind, for three or four dollars a head. A good ram, bull, or

boar, is, however, scarce, and proportionably dear, but most of the districts now have agricultural societies, at whose meetings prizes are given for every kind of stock, and the farmers are devoting much more of their attention to rearing horses, cattle, sheep, and pigs, than was the case ten years ago, when almost all the markets were supplied from the United States. Kingston and Toronto now are supplied from their own bulk; and, as it will interest an emigrant intending to settle, I shall give the market prices of both cities, premising only that, in country towns, provision of all kinds is much cheaper.

Toronto, January 2, 1846.

Equal to a Winchester bushel.

The price of keeping one horse in Kingston is about sixpence per day, in Toronto a shilling, but much less in all country places.

The affairs of the districts into which Canada is divided are managed by a warden and councillors in each district, and two councillors are elected for each township, having above 300 qualified voters, and one for each having a less number. The improvement of the district roads, bridges, schools, jails, court-houses, and all public matters requiring expenditure of the taxes raised within

the district, are arranged by this Board. Some very useful information for settlers is contained in the following :—

STATUTE LABOUR.—Every male inhabitant, from twenty-one to sixty, not rated on the Assessment Roll, is liable to work on the highways for two days.

Every assessed inhabitant is, in proportion to the estimate of his real and personal property on the Roll, liable to work on the highways, as follows:—Under £25 two days; under £50 three days; from that to £75 four days; from that to £100 five days; and

For every £50 above £100, up to £500, one day ;

„	100	„	500,	„	1000,	„
„	200	„	1000,	„	2000,	„
„	300	„	2000,	„	3500,	„
„	500	„	3500,	one day ;		

the fractional part between the different sums being always reckoned as a whole, and giving one day.

Every person possessed of a waggon, cart, or team of horses,¹ oxen, or beasts of burthen or draft, used to draw the same, is liable to work three days.

Indigent persons, oppressed by sickness, age, or having a large family, can be exempted at the discretion of the town warden.

Any person liable can commute at 2s. 6d. per day, if he thinks proper.

¹ Team is called in Canada and in the States a *span* of horses, and means two.

THE GENERAL ASSESSMENT.

By the 59th Geo. III., chap. 7, sect. 2nd, the following is deemed rateable property at the given valuation:—

Every town-lot in Toronto, Kingston, Niagara, and Queenston, £50; every town-lot in Cornwall, Sandwich, Johnstown, and Belleville, £25; every town-lot on which a dwelling is erected in Brockville, £30; do. in Bath, £20; every acre of arable, pasture, or meadow land, 20s.; every acre of uncultivated land, 4s.; every house built with timber, squared or hewed on two sides, of one story in height, and not two stories, with not more than two fireplaces, £20; for every additional fireplace, £4; every dwelling-house built of squared or flatted timber on two sides, of two stories in height, with not more than two fireplaces, £30, and for every additional fireplace, £8; every framed house under two stories in height, with not more than two fireplaces, £35, and for every additional fireplace £5; every brick or stone house of one story in height, and not more than two fireplaces, £40; every additional fireplace, £10; every framed, brick, or stone house, of two stories in height, and not more than two fireplaces, £60; every additional fireplace, £10; every grist-mill wrought by water, with one pair of stones, £150; every additional pair, £50; every saw-mill, £100; every merchant's shop, £200; every storehouse owned or occupied for the receiving and forwarding of goods, wares, or merchandize, for hire or gain, £200; every stud-horse, kept for hire or gain, £100; every horse of the age of three years and upwards, £8; oxen of the age of four years and upwards, per head, £4; milch cows, per head, £3; horned cattle, from the age of two years to four years, per head, £1; every close carriage with four wheels, kept for plea-

sure, £100; every phaeton, or other open carriage, with four wheels, kept for pleasure only, £25; every curricule, gig, or other carriage, with two wheels, kept for pleasure only, £20; every waggon kept for pleasure only £15; every stove in a room where there is no fireplace to be considered a fireplace.

All lands are rateable, held in fee-simple, or promise of fee-simple, by the land board certificate, order of council, or certificate of any governor of Canada, or by lease. The sum levied in no case to be greater than one penny in the pound for any one year.

The Queen, should she be possessed of, or in occupation of any property in the province, is exempted from the payment of taxes.

Each township of a district elects its own officers; at meetings held annually, on the first Monday in January, and called by the township clerk, after he has obtained a warrant from two or more justices of the peace. All freeholders above twenty-one years of age are entitled to a vote, and choose the undermentioned officers, viz.—one assessor and a collector, with pound-keepers and path-masters, or overseers of highways, three town-wardens, and from three to eighteen fence-viewers, whose duty it is to regulate fences. These town-officers are liable

to penalty for refusing to serve, but cannot be elected oftener than once in three years: they have cognizance of all matters relating to cattle, height and nature of enclosures, and nuisances. Their duties are regulated by the district council's by-laws.

Each district has an inspector of licenses, deputy clerk of the crown, judge and clerk of District Court, a judge and a registrar of the Surrogate Court, and one or two registrars for deeds, with coroners, according to the extent, at all the principal towns or villages.

In each district is also a sheriff, a clerk of the peace, a treasurer, and, in some of the district towns, a board of police, with president, clerk, treasurer, and street-surveyor.

The officers of the incorporated cities or towns are similar to those at home.

Justice is administered by the courts of Queen's Bench, Quarter-Sessions, District Courts, and the Town Court, with Division Courts.

The terms of the Court of Queen's Bench

are four; and in Western Canada, at these times, the judges sit at Toronto to hear counsel on law questions.

Easter term commences on the first Monday in February, and ends on the Saturday of the following week.

Trinity term, second Monday in June, and ends Saturday of the following week.

Michaelmas term, first Monday in August, until Saturday of the following week.

Hilary, first Monday in November, until Saturday, as before.

The Quarter Sessions are held throughout the province on the 7th of January, 1st of April, 1st of July, and 18th of November.

The District Courts are held at the same time as the Quarter Sessions. This court has jurisdiction in all matters of contract from 40s. to £15; and, when the amount is liquidated or ascertained, either by the act of the parties, or the nature of the transaction, to £40. Thus a promissory note under £40 can be sued in this court before the district judge, who is usually a barrister: and an open or

unsettled account under £15, but none above that amount; also, all matters of wrong, or, as the lawyers please to call it, *tort*, respecting personal chattels, when title to land is not brought in question, and the damages are under £15. The judge of the District Court, by a late Act, presides also at Quarter Session.

The ordinary costs of a suit before him are from £5 to £10; and in the Queen's Bench, before a *real* judge, from £10 to £30.

The Division Courts are a sort of non-descript Courts of Conscience for recovery of small debts under £10; and here the district judge has his hands full, for he comes into play as president again, and has to hold courts in six divisions of his district once in two months.

The Court of Chancery is the *summum bonum*; its costs are, of course, very great, and its decisions, though not quite so protracted as those of England, nor involving such stakes, plague many a poor suitor who comes to *equity*, when he can no longer get

justice. I should most strongly advise him to ponder deeply, after wading through Division, District, and Queen's Bench, through judges without a wig and gown to judges in full paraphernalia, and barristers and attorneys without end, before he encounters a Master in Chancery. It may be such a lesson as he will never forget, for Canada is rather a litigious country—it is too near the States to be otherwise, and lawyers, as well as all other trades and professions, must live. Young settler, stick to your farm, get a clear title to your land, and never get into debt.

I left Kingston in autumn, as aforesaid, with the farm stock and implements, and embarked on board the Prince Edward steamboat, Captain Bouter, for the mouth of the river Trent, in the Bay of Quinte.

First you steam along the front of the famous city of Kingston, which now presents something of an imposing front, from the waters of the St. Lawrence, which here leave Lake Ontario and contract into two channels between which are Long Island and some

others. The channel nearest to the United States is very narrow, or about a mile; that on the Canada side is very broad, being from three to five or six, with an islet or rock in the centre of the mouth or opening of Lake Ontario, called Snake Island, having one tree upon it, and visible from a great distance.

A few miles above Kingston, you enter the Bay of Quinte by passing between the main land and Amherst Isle, or the Isle of Tanti, owned by Lord Mountcashell, on which are now extensive and flourishing farms. At the east end of the Isle of Tanti are the Lower Gap and the Brothers, two rocky islets famous for black bass fishing and for a deep rolling sea, which makes a landsman very sick indeed in a gale of wind. After passing this Scylla, the bay, an arm rather of Lake Ontario, becomes very smooth and peaceable for several miles, until you leave the pleasant little village of Bath, where is one of the first churches erected by the English settlers in Western Canada, and the beginning of the granary of the Canadas.

After passing Bath, the Upper Gap Charybdis gives you another tremendous rolling in blowing weather, and the expanse of Lake Ontario is seen to the left, with the tortuous bay of Quinte again to the right; this arm of the lake being made for fifty or sixty miles more by the fertile district of Prince Edward, an island of great extent, and one of the oldest of the British settlements in Upper Canada, where Pomona and Ceres reign paramount; for all is fertility.

The Bay of Quinte, in fact, on both the main shore and on Prince Edward, is one unvaried scene of the labours of the husbandman; for the forest is rapidly disappearing there, and the luxuriance of the scenery in harvest can only be compared with the best parts of England. It is indeed a glad and a rich country.

The Lake of the Mountain and the Indian village of Tyandinaga are the lions of this route: the former, a singular crater full of the purest water, on the summit of a hill of some altitude, without any apparent source, but overflowing

in a stream sufficient for mill purposes and very deep; the latter the seat of a portion of the Mohawks already mentioned.

The vessel calls at several small settlements, and stops for the night at Hallowell or Picton, for the village has both names. This is a most picturesque locality, in a nook of the bay, with undulating hills and sharp ravines, a handsome church and other public edifices, and a large and thriving population. But we must for the present keep on board the steamer, and, after sleeping there, go on to Belleville, leaving Fredericksburgh, Adolphus Town, and many others in the Midland, to coast the Victoria district, and enter the charming little retreats in this pleasant bay to be described more at leisure.

Belleville, the county town of the Victoria district, is situated on the shores of this bay, and, from an insignificant village in 1837, has risen in 1846 to the rank of a large and flourishing town, the main street of which surprised me not a little by its extent, the beauty of its buildings, and the display of its

shops. I mounted the hill-side which overlooks it, and there saw three fine churches, the English, Roman Catholic, and Scotch places of worship, a large well built courthouse and jail, and some pretty country-houses. I should think that Belleville has nearly four thousand inhabitants; and, as it is the outlet of a rich back country, and on the main road from Kingston to Toronto, it will increase most rapidly. The worst feature about Belleville in 1837 was that it was the focus of American saddle-bag preachers, teachers, and rebelliously disposed folks; but I am told that most of these uneasy loafers have left it, and that its character has improved wonderfully. What a nuisance are peddling, meddling, politicians of the lowest grade? Wherever they plant their feet, a moral pestilence follows. These fellows won't work, for the voluntary principle in preaching or teaching pays better, and does not cost so much trouble. It is surprising with what facility, in England, as well as in Canada, a saddle-bag doctor of divinity takes his degree,

and becomes possessor of the secrets and director of the consciences and household of the small farmer. I once knew a family, a most respectable family of yeomen, of ancient descent and of excellent hearts, devoured by a locust of this kind in Buckinghamshire. In Canada they are devoured every day, and not unfrequently made disloyal into the bargain, although deriving their lands and support originally from the British government.

They travel to the most remote settlements, where no such opportunities as church or chapel of any kind exist for public worship; and, after gaining the good opinion of the simple settler by an exterior sanctity and a snuffling expression of it, they soon slide into the recommendation of the superior chances of salvation that offer themselves, by forgetting the Divine command of “Render unto Cæsar the things that are Cæsar’s,” and of the Apostolic doctrine of “Honour the King.” I have always been surprised that a democratic Bible retains such highly improper translations of the original tongue, as *prince*,

king, queen, and conceive that there should be a special Act of Congress to declare that henceforward the words of the English language should be abolished and the American tongue substituted, under pains and penalties, omitting the aforesaid and all other similar *obnoxiousities* from dictionary, grammar, and book. The Americans have just discovered that they have a prior claim to Oregon, and therefore must be an older nation than the British, the separation being a mere trifle, and the sway of England over the thirteen colonies and her ancient settlement of America a dream; ergo, the American language is the primitive tongue. A very excellent worthy gentleman of New York wrote to a friend in Kingston lately, stating that he was sorry that England was going to such an expense in fortifying that town, as it and all Canada would soon be American, and then the money thrown away would be missed.¹

¹ In crossing the Atlantic in an American packet with a highly-gifted American, he told me one day that he was

It is actually astonishing, and will scarcely be credited at home, that all except the most reflecting people in the United States have, within the last five years, become really and seriously impressed with the notion that the whole continent of the New World is a part of their birthright, and that it is about to pass under their dominion, as a matter of course, as well as that all the powers of the Old World cannot hinder this consummation one day, or even exist themselves much longer, as a political millennium is speedily coming on.

As an example of the self-sufficiency of this feeling, I quote a letter from a governor of a State, lately written to his constituents, perhaps on the strength of re-election, but really developing the national notion. In reply to a letter addressed to him by the whigs of Chautauque county, desiring his consent to

really glad to observe that such excellent dockyards were making at Bermuda, as in a few years they would no doubt belong to the Union. This was not said boastingly, but seriously.

stand as one of their candidates for the delegates to the Constitutional Convention, ex-Governor Seward wrote a reply of which the following is an extract :—

“ I want no war—I want no enlargement of territory sooner than it would come if we were contented with a masterly inactivity. I abhor war, as I detest slavery. I would not give one human life for all the continent that remains to be *annexed*.

“ But I cannot exclude the conviction that the popular passion for territorial aggrandizement is irresistible. Prudence, justice, cowardice, may check it for a season, but it will gain strength by its subjugation. An American navy is hovering over Vera Cruz. An American army is at the heart of what was Mexico. Let the Oregon question be settled when it may, it will, nevertheless, come back again. Our population is destined to roll its resistless waves to the icy barriers of the north, and to encounter oriental civilization on the shores of the Pacific. The monarchs of Europe are to have no rest, while they

have a colony remaining on this continent. France has already sold out. Spain has sold out. We shall see how long before England inclines to follow their example. It behoves us then to qualify ourselves for our mission. We must dare our destiny. We can do this, and can only do it by early measures which shall effect the abolition of slavery, without precipitancy, without oppression, without injustice to slaveholders, without civil war, with the consent of mankind, and the approbation of Heaven. The restoration of the right of suffrage to free men is the first act, and will draw after it in due time the sublime catastrophe of emancipation."

It is with nations as it is with individuals ; a boy very soon fancies himself a man ; he takes a switch in his hand, rides a muck against thistles and stinging nettles, cuts off their heads, might and main, and then fancies himself a Wellington or a Nelson. Young nations have the same notions, and age tames both the one and the other.

Texas was easily tampered with ; it was

peopled only to be the People's : but Mexico may be a harder bone to pick. Already is a newspaper published there, named *El Tiempo*, *The Times*, to advocate a return to monarchy, in order to save the Spanish race from the Stars and the Stripes ; and the besotted and wretched Republics of the South, conceived in folly, and born of the splendid dream of Canning, are falling to pieces from internal wars. Will his Ophirian Majesty, the Emperor of Brazil, humbly lay his crown at the feet of the Eagle, and are all our West India islands to be sipped up in the spoon of the President ?

Let the United States be a great, a free, and an enlightened Republic ; no one in England desires otherwise. Let it hold the balance, to curb the semi-barbarous States of South America, and let it spread the gospel of peace, and the literature and laws of Britain to the uttermost parts of that benighted region ; but also let it curb itself in time, before it seeks to overthrow all order, all rule, all right, and all reason, under the feet of its mere fancied might.

There is not in England that hatred of its American offspring, which exists so largely towards the Parent State in the Union; on the contrary, there is an earnest, a sincere desire for the well-being and advancement of its best interests; but it is useless to conceal, and it would be unmanly also to attempt to do so, that the British pulse does not beat in unison with Lynch law, or with mob-rule, any more than it would with the tyranny of a despotism; neither will the honest pride of the English, the Irish, or the Scotch, permit that mob dominion, the might of the mass, to dictate a line of conduct upon any question, territorial or gubernative. Many master-minds at home admire the principles of the American constitution, as established by Washington; but they deeply regret the gulf that has opened since the era of that law-giver; and there are few indeed who would dream even of exchanging the freedom of England for the freedom of the United States.

The Reformers of British origin in Canada are, no doubt, very numerous; and, owing to

misconception and other causes, with which the public are now acquainted, were once desirous of hoisting a new flag; but time and reflection have been at work since, and the term reformer in Canada is no longer one with which a word of fewer syllables is synonymous. Even during the rebellion, as it was called, of 1837, but which more properly should be called the border troubles, there were very few Upper or Western Canadians concerned, as the brigands were chiefly American borderers; the real rebellion being confined to Lower Canada. I commanded a very large body of militia, much of which had been gathered from the districts and counties where the Reformers had their strongholds, and in the ranks there were full as many Reformers as there were Tories, as the other party were then called.

These subjects force themselves upon my attention, from the voyage near the shores of Sydney, Thurlow, and other townships, where Reformers and the really disaffected were very numerous in 1837; but, notwithstanding all

this, it may be freely and fairly asserted again and again, that, let an invading force appear on their soil, the people of Canada will fight for home, for liberty, and for Queen Victoria.

We steamed on to the Trent river through a glorious corn and apple country, and arrived there in time to meet my young friend, and to proceed in our waggon to Brighton, a few miles westward on the Toronto road, where we slept.

Trent Port, or Trent village, is situated on both banks of the exitus of the Trent river into the Bay of Quinte, and is remarkable for two things: as being the intended outlet of one of the finest back countries in Canada, by a gigantic canal, which was to open Lake Huron to Ontario, through a succession of inland lakes and rivers, but which noble scheme was nipped in the bud after several of the locks had been excavated, and very many thousands of pounds expended. It is now remarkable only for its long, covered wooden bridge, and the quantity of lumber, *i. e.*, in the new American Dictionary, deals,

plank, staves, square timber, and logs floating on the tranquil water for exportation.

Brighton is a little pleasant high-road hamlet, with two inns, and no outs, as it is not a place of trade, excepting as far as a small saw-mill is concerned; but this will change, for it is near Presqu'ile, the only natural harbour on Lake Ontario's Canada shore, from Toronto to Kingston, or from one end to the other. Here the Bay of Quinte approaches the lake so close, that a canal of four or five miles only is requisite, through a natural level, in order to have a safe and sheltered voyage from Kingston without going at all into the real and dangerous lake, which is every where beset with "ducks and drakes," as its rocky and treacherous islets are called.

This canal, which may be constructed easily for about five and twenty thousand pounds, must soon be made, and the bar of Presqu'ile Harbour deepened, so as to ensure a shelter for vessels in the furious gales of October and November.

The canal is always traced on maps, and

called Murray Canal, I presume, after the late Master-General of the Ordnance, during his government of the province. It is, without doubt, one of the most important and necessary works in Canada West; and, as it will lead into the Trent navigation, when that shall be finished, will be the means of adding some millions of inhabitants to the fairest portion of the land, now known only to wretched lumbermen.

The River Trent is a large stream, full of shallows, and rapids, and beautiful lakes, taking its rise north of the township of Somerville, in the Colborne District, not very far from a chain of lakes, which reach the Ottawa on the east, and the Black River, a feeder of Lake Simcoe, and a tributary of Huron and the Severn, on the west.

The river Trent is strangely tortuous, but keeps almost entirely within the Colborne district, named after Lord Seaton, and at Rice Lake afforded a site for the Colonial Office to establish a flourishing colony a few years ago at Peterborough, and to open an

entirely new and very rich portion of Canada West.

This river, placed, as it were, by Nature as the connecting link of a great chain of inland navigation, embracing the expanse of Huron, Ontario, and the Ottawa, opens a field of research both to the agriculturist and the forester. The woods abound with the finest kind of untouched timber ; the land is fertile in the extreme ; and the rivers, streams, and lakes abound with fish. In short, had the Trent Canal been finished, instead of the miserable and decaying timber-slides, which now encumber that noble river, another million of inhabitants would, in ten years more, have filled up the forests, which are now only penetrated by the Indian or the seeker after timber.

A private individual has, however, put a steamboat upon the centre of the river's course ; and Mr. Weller, no doubt, finds that it pays him well, for the portion of Colborne district near Rice Lake is settling rapidly.

The Trent Canal, or a railroad, in the same

direction, would lead to the Georgian Bay of Huron, and thus render a journey to the far West easy of accomplishment, as it is the most direct route from Oswego and New York.

But I must journey on, and, after resting at Brighton, start by daylight, and penetrate into the bowels of the land by a sandy road, which, after passing that village, stretches into the forest due north.

Away the waggon went, not at a hand-gallop, for the sand was too deep for that, and, passing through woods by a tolerably good road for so new a settlement, we, every now and then, at intervals few and far between, saw a new farm or a new log-hut.

The day was fine, and so, having carried our provision with us, we halted in the deep woods, upon the muddy banks of the Cold Creek, to breakfast. A Tartar camp was visited by an English traveller somewhere in the dominions of the Grand Lama, and he was treated to London porter. So were we in the deep forest of Central Canada, for

London porter appears to travel everywhere ; and, discussing it with much relish, we fed the horses, and gave them what they liked much better, clear and pure water—which indeed I now think would have been quite as good for us—and waggoned on, until we came to a surprising new settlement in the Bush, the villages of Percy and Percy Landing, where, there being mill “privileges,” as a sharp running water-stream is called in the United States, flour and saw-mills have been established, and a very thriving population is rising both in numbers and in means. Here we dined in a new inn, or rather tavern, kept by a French Canadian, and then pursued our journey for a few miles on a decent new road, amidst fine settlements and good farms, and, crossing a beautiful stream, plunged into the undisturbed forest by a road in which every rut was a canal, and every stone as big as a bomb-shell at the very least. How the waggon stood it, and the roots and stumps of the trees with which these boulders were diversified, I am still unable to explain ; for my part, I walked

the greater part of it, for the bones of my body seemed as if they were very likely, after a short trial, to part company with each other.

At length, after jolting, jumping, complaining, and comforting, we came to a bridge near Myer's Mills. Our *conducteur*, my young friend aforesaid, who was more used to the road, saw at a glance that something had gone wrong with the said bridge; for it exhibited a very disorderly, drunken sort of devil-may-care aspect.

He was too far advanced upon it to retreat, when he discovered that a beam or two had departed into the lively current below. With true backwoodsman's energy, he pulled his horses up sharp, reined them well up, and then, with a tremendous shout, applied the whip, and actually leaped horses, wagon, and passengers over the chasm, the remainder of the bridge groaning, and saying most plainly, "I will not bear this any longer." Next morning, we heard that the whole structure had fallen in and disappeared.

I have been in some danger in the course of my life ; but a visit afterwards to this spot convinced me that one's existence is often a sort of size-ace throw ; and whether the six or the one comes up or goes down, is a miracle. I never had a nearer leap for clearing Styx than this, excepting one shortly afterwards upon the timber-slides of the Trent, at Healy's Falls.

A vast timber canal or way had been constructed here by the Board of Works, to convey timber down a rapid without danger, the slide being alongside of that rapid. It was an interesting work ; and, with my young friend and two naval officers, settled in Seymour, I went to examine it. At the sluiceway, or timber-dam, was a sort of bridge, composed of parallel pieces of heavy square joists and a platform ; we walked along this Mahomet's railway, where Azrael seemed to have established pretty much the same sentry as Cerberus, having two or three mouths ready to devour the adventurous passenger.

The parallel pieces were about two feet distant from each other ; I walked on one, and my companions on the other, until a good view of the whole work and the splendid rapids was attained. Under our feet, at some distance, was the water of the slide running on an inclined plane of woodwork, at a great angle, and with enormous power and velocity into a pitch or cauldron far below.

The day was bright, and the shadow of the parallel logs left between the space no view of the water underneath. They called me suddenly to look at the rapid. I jumped, as I thought, over the space between us ; but my jump was into the shadow. One of the naval officers, a powerful man, six feet and more in height, saw me jump ; and, just as I was disappearing between the timbers, caught me by the arm, and, by sheer muscle and strength, held me in mid-air. The other immediately assisted him, but my young friend became deadly pale and sick. I did not visit either the slide or the cauldron ; in either, instantaneous and suffocating death

was inevitable. Reader, never leap in dark places, and look before you leap. My young friend looked before he leaped over the bridge with his span of horses, and, like a gallant *auriga*, guided his van without fear; but he told me afterwards that the cold sweat sat on his brow, when the chasm was cleared, as much on the bridge as it did at my Quintus Curtius venture. By the by, did Quinte Curce, as the French so adroitly call him, ever leap — I doubt the fact — into the chasm which closed over him?

After passing this bridge, and a slough of despond beyond it, we again plunged into the woods, and, mounting over boulders, sinking into bog-holes, and fairly jolted to jelly, on a sudden turned into an open space of near a hundred acres, round which the solemn and stately forest kept eternal guard. Here, in the space of ten or twelve years, our pioneer friends had laboured through weal and through woe, through Siberian winters and West Indian summers, through ague and fever, to create a little modern paradise.

My young friend commenced in this secluded region, where the outer barbarian was never seen and seldom heard of, where even the troubles of 1837-8 never showed themselves, his location upon one hundred acres. He had received the very best education which a public institution in England could afford; but circumstances obliged him, at the early age of twenty-five, to turn his thoughts, with a young wife, to "life in the Bush," as a sole provision. The partner of his cares, equally well educated, and of an ancient family, by the death of her father, who was high in office in his country's service, was left equally unprovided for.

With youth and good constitutions, a determination to make their own way in life spurred them on to the most disheartening task, a task which thousands of young people from Britain have, however, daily to encounter in Canada, and the progress of which I relate simply from a desire to show that "life in the Bush" is not to be entered into without solemn and serious reflection.

Their first undertaking was to clear an acre or two of the forest, and crop it with grain and potatoes; then to build a log-house. In all this they were assisted by friends and neighbours as far as the limited means of those friends and neighbours, who were all similarly engaged, and the settlement containing not more than four or five families, would admit of.

My young friend really set his shoulder to the wheel, and did not call upon Hercules whiningly. He had a fondness for carpenter's work, and, having cut down the huge pine trees on his *lot*, for so a property is called in Canada West, he hewed them, squared them, and dovetailed them; he quarried stone with infinite toil, burnt lime, and in the short space of two years had a decent log-palace, consisting of two large rooms, and a kitchen and cellar, with an excellent chimney, a well which he dug himself, and a very large framed barn, which he built himself, the only outlay being for nails, shingles to cover his roofs, and boards. These he had to bring with oxen

and a waggon from the saw-mills at Percy, many miles off, and by the most hideous road I ever saw, even in Canada. He split his own rails, made his own fences, and cleared his own forest. This first settlement was commenced in 1840, and, when I saw it in 1845, he had nearly thirty acres cleared, and this clearance and his really good house let to a settler just arrived.

By one of those freaks of fortune unforeseen and unaccountable, a connexion, who occupied the adjacent farm of two hundred acres, and had had the command of money, died, and his property was left to the young couple.

This gentleman, in the course of six or seven years, from the first settlement of this portion of Canada, had built an excellent house, had cleared a hundred acres, had a good garden, and everything which a settler could desire, with a well-stocked farm-yard, and a well-furnished house, into which my young friend stepped from his log-palace and became monarch of all he surveyed.

But money, the sinews of war, was wanted;

for, although the land, house, goods, and chattels became his, the funds went to another person, all but a trifling annual sum.

The young couple had now a family growing about them, and, as they were very old friends of mine, they asked me to come and see "life in the Bush."

Farmer Harry, as we will call my young friend, had now three instead of two hundred acres to attend to, but he had a flock of sheep, a pair of oxen, the *span* of horses I brought for him, several cows, much poultry, and a whole drove of pigs, with barns full of wheat, peas, hay, and oats; an excellent garden, a fine little brook full of trout at his door, plenty of meadow, and his harvest just over.

To help him, he had a hired man, who drove the oxen and assisted in ploughing; and to bring in his harvest there were three hired labourers, at two shillings and sixpence a day each, and their food and beds, with two maid-servants, one to assist in the dairy. Labour, constant and toilsome labour, was still necessary in order to make the farm pay; for

there is no market near, and everything is to be bought by barter.

Salt, tea, sugar, and all the little luxuries must be had by giving wheat, peas, timber, oats, barley, the fleeces of the sheep, salted pork, or any other exchangeable property; and thus constant care and constant supervision of the employed, as well as constant personal labour, are requisite in Canada on a farm for very many years, before its owner can sit down and say, "I will now take mine ease."

The female part of the family must spin, weave, make homespun cloth, candles, salt the pork, make butter for sale, and even sell poultry and eggs whenever required; in short, they must, however delicately brought up, turn their hands to every thing, to keep the house warm.

The labour of bringing home logs for fuel in winter is not one of the least in a farm, and then these logs have to be sawed and split into convenient lengths for the fireplaces and stoves.

But all this may be achieved, if done cheerfully ; and, to show that it can, I will add that, amidst all this labour, my young friend was building himself a dam, where the beavers, in times when that politic and hard-working little trowel-tailed race owned his property, had seen the value of collecting the waters of the brook. He was repairing their decayed labours, for the purpose of washing his sheep, of getting a good fish-pond, and of keeping a bath always full for the comfort of his family.

What a change in ten years ! The forest, which had been silent and untrodden since the beavers first heard afar off the sound of the white men's axes, was now converted into a smiling region, in which a prattling brook ran meandering at the foot of gently swelling hill-sides, on which the snowy sheep were browsing, and the cattle lowing.

A field of Indian corn was rustling its broad and vivid green flaggy leaves, whilst its fruit, topped by long silky pennons, waving in the breeze, seemed to say to me, " Good En-

glishman, why do your countrymen despise my golden spikes? do they think, as they do of my ugly, prickly friend the oat, that I am not good enough for man, and fit only for the horse or the negro? You know better, and you have often eaten of a pound-cake made of my flour, which you said was sweeter and better than that of wheat. You have often tasted my puddings; come now, Mr. John Bull, were they not very good?"

"Certainly they were, Mr. Maize, and hominy and hoe-cake and all that sort of thing are good too; but pray don't ask me to devour you in the shape of mush, molasses and butter. Take any shape but that, and my firm nerves will never tremble."

Jesting apart, the flour of Indian corn, or maize, is as much superior, as nutritive food, to potatoes, as wheat flour is to Indian corn. I wish the poor Irish had plenty of it.

The farmers in Upper Canada use it much, but in that wheat country it cannot of course be expected that it supersedes flour, properly so called. They also use buckwheat flour

largely in the shape of pancakes, and a most excellent thing it is.

My friend's life was diversified; for, during the season that the crops are ripening, he had time to spare to go out on fishing and shooting excursions on the Trent, and occasionally in winter a little deer-hunting, with, *longo intervallo*, a bear-killing event.

I went to a combined fishing and shooting pic-nickery, and travelled from Rainey's mills and Falls all along the valley of the Trent to Healy's Falls.

The Trent is a beautiful and most picturesque river, rushing and roaring along over a series of falls and rapids for miles together, and expanding in noble reaches and little lakes.

Rainey's Falls I have faintly sketched, to show the soft beauty of some parts of this river; at Healy's Falls it is more broken.

We went to Crow Bay, just above which the Crow River, from the iron mine country of Marmora, runs into the Trent. Here we found two friends, brothers, settled in great

comfort. They had been about ten years in the "Bush," and had excellent farms and houses equal to any I have seen so far in the interior, with every comfort around them. In one of their pleasure-boats, we embarked for the junction of the rivers, on which it is intended to place a town when the country becomes more settled.

All is now forest, excepting a very extensive and very flourishing settlement of twelve hundred acres, undertaken by a retired field-officer in the army, which was a grant about ten years ago for his services, and is now worth two thousand pounds, or perhaps more, since a bridge has been built by the provincial legislature over the Trent, in order to connect the mail route between the townships of Seymour-East and Seymour-West, as both are filling up rapidly, and land becomes consequently dear and scarce.

The price of land in Seymour at present is, improved farm, if a good house and barns are on it, at least two pounds an acre, including clearance and forest ; Canada Company's

land, from fifteen to twenty shillings an acre ; wild land, in lots of one hundred or two hundred acres ; Clergy Reserve, or College land, called School land, according to situation, from twenty-five shillings an acre upwards to thirty, all wild land. Private Proprietors' wild land, in good situations, twenty shillings an acre, and very little for less. Along the river-banks, none, I believe, is to be had, unless at very high prices.

It is intended, no doubt, to complete the navigation of this splendid river by and by, and thus holders of land are not very anxious to sell at a cheap rate ; and as the Board of Works has constructed, at an expenditure of upwards of twenty thousand pounds, timber slides, along all the worst rapids by which the lumber is taken to the mouth of the Trent, a certain importance is now attained for this river which did not before exist ; but this is of very little use to Seymour, in which, new as the township is, all the best pine has already been culled and cut down

by the lawless hordes of lumberers, who, of course, no longer consume any of the farm produce; yet it adds to the importance of the river generally.

The first settlers in Seymour were lumber merchants, who, seeing the wealth of the country in pine, and oak, and ash, the great fertility of the soil, and the facilities afforded everywhere for erecting mills, established themselves permanently, and, before the agriculturists were induced to think of it, had removed from all land within miles of the river the only valuable timber that the township contained. Thus one source of profit, and that a very great one to the farming settler, has been destroyed, and the enterprising timber-merchant has established at convenient distances several saw-mills, where his lumber is converted into plank and boards for the lower markets, and where he is at all times ready to saw whatever timber the farmer has left into boards and planks for him, receiving so many feet of timber, and giving so many feet of lumber, as sawed

timber is called, taking care of himself, of course, in the exchange.

The flour-mills at Percy proceed upon the same principle: a farmer brings sacks of grain and receives sacks of flour in exchange, said exchange being of course three to one, or more, against him.

Throughout Canada is this truck or barter system pursued, and very little money finds its way either into or out of the back townships, unless it be the receipts of the lumber-merchant from Quebec or the lakes. The lumber-merchant is, therefore, the lord of the Trent, or of any other great internal river, whereon are new settlements; and many of them have amassed large fortunes.

Thus came timber-slides, instead of canal, upon this splendid river, which must, as soon as the Murray Canal, on the Bay of Quinte, is undertaken, be also opened to navigation, as by it the richest part of Western Canada, both in soil and in minerals, will be reached, and a direct communication had in war-time from Kingston, the great naval key of the

lakes, with Penetangueshene, and Lakes Huron and Superior.

I have not time now, nor would it amuse the reader, to give a detail of the project for canalling the Trent, part of which was well executed before the troubles of 1837; but the money was voted, and is not so enormous as to justify the non-performance of so important a public work. The timber-slides I look upon as mere temporary expedients.

But let us launch upon Crow Bay, and, stealing silently along, get near the wild rice which grows so plentifully on its shallows, and where is found the favourite food of the wild duck, which, by the by, is no inconsiderable addition to a Canadian dinner-table in the Bush. I do not mean, reader, the wild duck, but the wild rice, which said duck eats; for, when well made into a rice pudding, I prefer it, and so do many who are greater epicures, to either Carolina or East India rice.

The wild ducks suffered not from me, for I had no gun, and, after crossing the rapid

current of the junction of the rivers, we landed on the isthmus formed by them, where, striking a light and making a fire, we bivouacked, and one of the party went in search of a deer, whose tracks were seen. This is a singular place, covered with dwarf oaks, on a sandy soil, and looking for all the world like an English park in Chancery.

Almost every oak bore the marks of bears' claws, as it was a favourite place for those hermits, who live on acorns, blackberries, wild gooseberries and currants, and I dare say raspberries, strawberries, and whortleberries, with which the place abounds in their seasons. The boughs of the oaks were also broken by the repeated climbings of Bruin, and it must be somewhat dangerous, when he is very hungry, to land here and traverse the Bush alone: but we saw none, although we walked through it, admiring the rushing river, and occasionally going down the steep banks to fish in the rapids for black bass, of which several were caught, and, with several wild ducks, formed the day's

sport, which day's sport was twice or thrice repeated, until I had seen as much of the beauty of the wild river and the nature of the soil and country as was desirable.

It was somewhat melancholy, on reaching Healy's Falls, which are turbulent rapids of the most picturesque character, with an immense timber-slide, or broad wooden sloping canal alongside of them, to see the clearance in this far solitude formed by the workmen. They had built houses, shanties, and sheds, and had lived and loved together for many a month, with their families, on this charming spot. Nothing was in ruin : all was new, even to the window-glass ; and when our party, after toiling away through the forest, reached the opening, and saw below us the foaming rapids, the grand forest, the rugged banks, the timber-slide, and the little wooden town, we thought, here at least, is a well chosen hamlet, at which we may rest awhile.

No smoke rose from the chimneys ; not a soul appeared to greet us ; the eagle soared above ; the cunning fox, or the murderous

wolf, the snake and the toad, alone found shelter, where so many human beings had so recently congregated, where, from morn till dewy eve, the hum of human voices had been incessant, and where toil and labour had won support for so many.

Occasionally, the rude and reckless lumberman halts here, whilst his timber is passing the slide ; the coarse jest and the coarser oath are alone heard at the falls of the Trent, save when the neighbouring farmer visits them, to procure a day's relaxation from his toils, and to view the grandeur of creation, and, we trust, to be thankful for the dispensation which has cast his lot in strange places. What must be the occasional thoughts of a man educated tenderly and luxuriously in England, when he reflects upon the changes and the chances which have brought him into contact with the domain of the bear, of the snake, and of the lumberer ? Dear, dear England, thy green glades, thy peaceful villages, thy thousand comforts, the scenes of youth, the friends, the parents, who have gone to the land of

promise—will these memories not intrude?
No where in this wonderful world do they
come upon the mind with more solemn im-
pressiveness than in the wild woods of Canada.

CHAPTER XVIII.

Prospects of the Emigrant in Canada—Caution against Ardent Spirits and excessive Smoking—Militia of Canada—Population—The mass of the Canadians soundly British—Rapidly increasing prosperity of the North American Colonies, compared with the United States—Kingston—Its commercial importance—Conclusion.

It is time to take leave of the reader, and to say again some few parting words about the prospects which an emigrant will have before him in leaving the sacred homes of Britain, hallowed by the memories of ages, for a world and a country so new as Western Canada.

If the well-educated emigrant is determined to try his fortunes in Canada, let him choose either the eastern townships, in Lower Canada, or almost any portions of Canada West. I premise that he must have a little money at command; and, if possible, that either he, or

some member of his family, have an annual income of at least fifty pounds, and that the young are healthy, and determined not to drink whiskey.

Drink not ardent spirits, for it is not necessary to strengthen or cheer you in labouring in the Bush. I am not an advocate for an educated man joining Temperance Societies, and look upon them as very great humbugs in many instances ; but, with the uneducated, it is another affair altogether. If an educated man has not sufficient confidence in himself, and wishes to reduce himself to the degraded condition of an habitual drunkard, all the temperance pledges and sanctimonious tea-parties in the world will not eventually prevent him from wallowing in the mire. Father Matthew deserves canonizing for his bringing the Irish peasantry into the condition of a temperate people, but there religion is the vehicle ; with Protestants such a vehicle should never be attempted, unless the clergy once more are the directors of conscience and of action, and could conscientiously absolve

the taker of the pledge, should he fail. With the diversity of sects now existing in Protestantism, this would be obviously impracticable, and the attempt lead to a result one can hardly imagine without horror. No oath ought to be administered to a Protestant on such a subject; as, if a believer of that class of Christians should voluntarily take one and then break it, how much greater would his sin be than the sin of one who really and truly is convinced that a human being could pardon him, should he perjure himself!

The effects of drinking spirits in Canada are beyond anything I had imagined, until the report of the census of the Lower province for 1843, and that of Dr. Rees upon the lunatic asylum at Toronto, in the Upper, were published. The population of Lower Canada was 693,649, of which there were—

	Males.	Females.	Total.
Deaf and dumb	447	278	725
Blind	273	250	523
Idiots	478	472	950
Lunatics	156	152	308
	<hr/>	<hr/>	<hr/>
Total	1354	1152	2506

The proportion of deaf and dumb to the whole population is as 1 to about 957: a greater proportion than prevails throughout all Europe (1 to 1537), United States (1 in 2000), or the whole world throughout (1 in 1556.)

The census of Upper Canada, taken a year before, gives the total population as 506,505. Of these there were—

	Males.	Females.	Total.
Deaf and dumb	222	132	354
Blind	114	89	203
Idiots	221	178	393
Lunatics	241	478	719
	<hr/>	<hr/>	<hr/>
Total	798	877	1669

Thus, of a total population of 1,200,154, in 1833, there were 1027 persons confined in the provincial lunatic asylums, and perhaps a great many more out of them, as they have only just come into operation, and are still very inefficient. The idiots, it will appear, amounted to 1349.

In the whole North American continent, Canada is only exceeded by the States of New

Hampshire and Connecticut, in the lists of insanity; and, to show that intemperance as well as climate has something to do with this melancholy result, I shall only state, without entering into details, that a well-informed resident has calculated that, when the province contained the above number of inhabitants, the consumption of alcoholic liquors, chiefly whiskey, was, excluding children under fifteen years of age, five gallons a year for every inhabitant; whilst, in 1843, in England and Wales, where the most accurate returns of the Excise prove the fact, it is only 0·69 of a gallon; in Scotland, 2·16; in Ireland, 0·64; and the total consumed by each individual, not excluding those under fifteen, is only 0·82 per annum for the three kingdoms. If the children under fifteen in Canada are to be included, still the consumption of spirit is awful, being $2\frac{3}{4}$ gallons for each; but it must be much higher, since the Excise is not regulated as at home.

That such excessive drinking prevails in Canada may be attributed partly to the cheap-

ness of a vile mixture, called Canadian whiskey, and partly to climate, with a thermometer ranging to 120°, and with such rapid alternations. In Canada, also, man really conquers the earth by the sweat of his brow; for there is no harder labour than the preparation of timber, and the subduing of a primeval forest in a country of lakes and swamps.

I have an instance of the effect of excessive drinking daily before my door, in the person of a man of respectable family and of excellent talents, who, after habitually indulging himself with at last the moderate quantum of *sixty* glasses of spirits and water a day, now roams the streets a confirmed idiot, but, strange to say, never touches the cause of his malady. Are, therefore, not idiocy, madness, and perhaps two-thirds of the dreadful calamities to which human nature is subject here, owing to whiskey? I have seen an Irish labourer on the works take off at a draught a tumbler of raw whiskey, made from Indian corn or oats, to refresh himself; this would kill most men unaccustomed

to it ; but a corroded stomach it only stimulates.

Canada is a fine place for drunkards ; it is their paradise — “ Get drunk for a penny ; clean straw for nothing ” there. Think, my dear reader, of whiskey at tenpence a gallon—cheaper than water from the New River in London. Father Matthew, your principles are much wanted on this side of Great Britain.

Then, smoking to excess is another source of immense evil in the Backwoods. A man accustomed only to a cigar gets at last accustomed to the lowest and vilest of tobacco. I used to laugh at some of my friends in Seymour, when I saw them with a broken tobacco-pipe stuck in the ribbon of their straw hats. These were men who had paraded in their day the shady side of Pall Mall. They found a pipe a solace, and cigars were not to be had for love or money. “ Why do you not put your pipe at least out of sight ? ” said I.

“ It is the Seymour Arms’ crest,” re-

sponded my good-natured gentlemen farmers, "and we wear it accordingly."

Smoking all day, from the hour of rising, is, I actually believe, more injurious to the nerves than hard drinking. It paralyzes exertion. I never saw an Irish labourer, with his hod and his pipe, mounting a ladder, but I was sure to discover that he was an idler. I never had a groom that smoked much who took proper care of my horses; and I never knew a gentleman seriously addicted to smoking, who cared much for any thing beyond self. A Father Matthew pledge against the excessive use of tobacco would be of much more benefit among the labouring Irish than King James his Counterblast proved among the English.

The emigrant of education will naturally inquire, if, in case of war, he will be under the necessity of leaving his farm for the defence of the country.

The militia laws are now undergoing revision, in order to create an efficient force.

The militia of Western Canada are well

composed, and have become a most formidable body of 80,000 men,¹ and are not to be classed with rude and undisciplined masses. In 1837, they rushed to the defence of their soil; and, so eager were they to attain a knowledge of the duties of a soldier, that, in the course of four months, many divisions were able to go through field-days with the regulars; and the embodied regiments, being clothed in scarlet, were always supposed by American visitors to be of the line.

There is a military spirit in this people, which only requires development and a good system of officer and sub-officer to make it shine. Any attempt to create partizan officers must be repressed, and merit and stake in the country alone attended to.

The population of the British provinces cannot now be less than nearly two millions; and it only requires judgment to bring forward the Canadian French to insure their acting against an enemy daring to invade

¹ Eastern and Western Canada comprise an able-bodied militia of 160,000.

the country, as they so nobly did in 1812. I subjoin the latest correct census, 1844, of the Franco-Canadian race, as it will now be interesting in a high degree to the reader in Europe.

It is taken from a French Canadian journal of talent and resources, and agrees with the published authorities on this subject.

Population of Lower Canada in 1831 and 1844.—The following table of the comparative population of Lower Canada at the periods above-mentioned first appeared in the *Canadien*.

	1831.	1844.
Saguenay . . .	8,385	13,445
Montmorency (1) . .	8,089	8,434
Quebec . . .	36,173	45,676
Portneuf . . .	13,656	15,922
Champlain . . .	6,991	10,404
St. Maurice . . .	16,909	20,594
Berthier . . .	20,225	26,700
Leinster (2) . . .	22,122	25,300
Terrebonne . . .	16,623	20,646
Deux Montagnes . .	20,905	26,835
Outaouais . . .	4,786	11,340
Montreal . . .	43,773	64,306
Vaudreuil . . .	13,111	16,616

			1831.	1844.
Beauharnois	.	.	16,859	28,580
Huntingdon (3)	.	.	29,916	36,204
Rouville	.	.	18,115	20,098
Chambly	.	.	15,483	17,171
Vercheres	.	.	12,819	12,968

Gaspé	.	.	5,003	7,458
Bonaventure	.	.	8,109	8,230
Total			511,919	678,590
In 1844	.	.	.	678,590
In 1831	.	.	.	511,919

Augmentation in 13 years . . 166,671

The increase during the interval between the years cited is about $32\frac{1}{2}$ per cent. It

would no doubt have been more considerable but for the cholera, which in 1832 and 1834 decimated the population. The troubles of 1837-8 likewise contributed to check any increase; as, at those periods, numbers emigrated from this province to the United States, and the usual immigration from Europe hither was also materially interfered with.

Assuming 1,500,000 as the present actual population of the Canadas, we shall examine the strength of British North America from published returns in 1845, or the best authorities.

POPULATION, 1845.		CHIEF CITIES.	POPULATION OF 1845.
Canada . . . 1,500,000	{	Montreal . . .	60,000
		Quebec . . .	30,000
		Kingston . . .	12,000
		Toronto . . .	20,000

Prince Edward's Island and the Magdalen Isles } 45,000	{	Charlotte Town .	—
Total Population			2,095,000.

A serviceable militia of 80,000 young men may, therefore, without distressing the population, be easily raised in British North America, with a reserve sufficient to keep an army of 40,000 able-bodied soldiers in Canada always in the field; and, if necessary, 100,000 could be assembled at any point, for any given purpose.

The Great Gustavus said that he would not desire a larger military force for defensive purposes than 40,000 men fit for actual service, to accomplish any military object, as such a force would always enable him to choose his positions. Two such armies of effective men could be easily maintained in the two Canadas, and concentrated rapidly and with certainty upon any given point, notwithstanding the extent of frontier; and the Canadians are much more essentially soldiers than the people of the United States, without any reference to valour or contempt of danger: whilst they would be fighting for everything dear to them, and the aggressors for mere extension of territory, and to ac-

comply with the fixed object of destroying all monarchical institutions.

I have already said that there is no sympathy of the Irish settlers in Canada with the native Americans, and the best proof of this is the public demonstrations upon St. Patrick's day at Montreal, Kingston, and Toronto, where the two parties, Protestant and Catholic, exhibited no party emblems, no flags but loyal ones, and where the ancient enmity between the rival houses of Capulet and Montague, the Green and the Orange, appeared to have vanished before the approaching arrogant demands of a newly-erected Imperium.

Independence may exist to a great extent in Canada. Gourlay figured it, twenty years ago, by placing the word in capitals on the arch formed by the prismatic hues of the cloud-spray of Niagara. He could get no better ground than a fog-bank to hoist his flag upon, and the vision and the visionary have alike been swallowed up in oblivion.

Canada does not hate democracy so very totally and unequivocally as my excellent

friend, Sir Francis Head, so tersely observed, but Canada repudiates annexation.

That a great portion of the population of this rapidly advancing colony feel a vast pride in imagining themselves about to become ranked among the nations of the world, I entertain not the shadow of a doubt; but that the physical and moral strength of Canada desire immediate separation from England, or annexation to the republic presided over by President Polk, is about as absurd a chimera as that of Gourlay and the spray of Niagara. The rainbow there, splendid as it is, owes its colours to the sun.

The mass in Canada is soundly British; and, having weighed the relative advantages and disadvantages of British principles and laws with those of the United States, the beam of the latter has mounted into the thin air of Mr. Gourlay's vision. The greatest absurdity at present discoverable is in the ideas of unfortunate individuals, who imagine themselves placed near the pivot desired by the philosopher, and that they possess the lever which

is to move the solid globe to any position into which it may suit them to upheave it.

A poor man by origin, and with some talent, suddenly becomes the Sir Oracle of his village; and, because the Governor-General does not advance his *protégé* or connexions, or because he does not imagine that the welfare of the province hinges upon his support, turns sulky, and obtaining, by very easy means, a seat in the Assembly, becomes all at once an ultra on the opposite side of the question.

In all new countries ambition gets the better of discretion, but fortunately soon finds its natural level: the violent ultra-tory, and the violent ultra-demagogue sink alike, after a few years of excitement, into the moth-eaten receptacle of newspaper renown, alike unheeded, and alike forgotten, by a newer and more enlightened generation, who find that, to the cost of the real interest of the people, the mouthing orator, the agitator, the exciter, is not the patriot.

Canada, although emphatically a new country, is rapidly becoming a most important

one, and increasing with a vigour not contemplated in England. It is proved, by ample statistical details, that the United States is behind-hand, *ceteris paribus*, in the race.

The thirteen colonies declared their independence in 1783, now only sixty-three years, and amply within the memory of men. The following data for 1784 may be compared to 1836 :—

	1784.			
	Imports.	Exports.	Population.	Shipping Tons.
Nova Scotia . . }	£75,000	£3,500	32,000	12,000
Cape Breton . . }				
St. John's . . }				
Prince Edward's Island . . }				
Canada . . .	500,000	150,000	113,000	95,000
Newfoundland .	80,000	70,000	20,000	20,000
Total .	£655,000	£223,500	165,000	127,000

1836,

Or just before the disturbances in Canada, and before the Union.

	Imports.	Exports.	Population.	Shipping Tons.
Nova Scotia .	£1,245,000	£935,000	150,000	374,000
Canada . . .	2,580,000	1,321,750	1,200,000	348,000
Newfoundland .	632,576	850,344	70,000	98,000
Cape Breton .	80,000	90,000	35,000	70,000
Prince Edward's Island . . .	46,000	90,000	32,000	23,800
New Brunswick	250,000	700,000	164,000	347,000
Total .	£4,833,576	£3,987,094	1,651,000	1,260,800

THE UNITED STATES.

	Imports.	Exports.	Population.	Shipping Tons.
1784 . .	£4,250,000	£1,000,000	3,000,000	500,000
1836 . .	162,000,000	121,000,000	15,000,000	2,000,000

Thus the increase in shipping alone to the North American colonies, compared with the United States, was as *ten* to *four*, and the increase of population as *ten* to *three*.

In imports, the United States, compared with the colonies in that period, increased as 40 to 9, exports 120 to 19; but then the Americans had the whole world for customers, and the colonies Great Britain only, until very lately, and then, even in the West India trade, they could scarcely compete with their rivals; whereas the Americans started with four times the shipping, nearly double the population, six times the import, and four times the export trade, and the people of the republic had already occupied at least ten great commercial ports, whilst Quebec, Halifax, and St. John, were yet in infancy as mercantile *entrepôts*.

Passing over all but Western Canada, we shall examine the state of that province after the rebellion of 1839, when Lord Durham informed us that

The population was . . .	513,000,	
Value of fixed and } assessed property }	£5,043,253	{ An increase of two millions and a quar- ter in ten years.
Cultivated acres . . .	1,738,500	
Grist-mills . . .	678	
Saw-mills . . .	933	
Cattle . . .	400,000	

and yet Upper Canada was only a howling wilderness in 1784.

It is now supposed, upon competent authority, that the British possessions north of New York contain not fewer than two millions and a quarter of inhabitants, a fixed and floating capital of seventy-five million pounds, a public revenue of a million and a quarter, with a tonnage of not less than two millions and a quarter, manned, including the lake craft, steam-boats, and fishing-vessels, by one hundred and fifty thousand sailors; and this Western Britain consumes

annually seven millions of pounds sterling of British goods.

The Inspector-General of Revenue for Canada alone gives us the following data :—

1845.

Revenue of Canada..... £524,637

Expenditure..... 500,839.

Now let us see what the Standing Army and Militia of the United States are in 1845 :

Standing Army—7,590 officers and men, including all ranks.

Militia—627 Generals, 2,670 Staff-officers, 13,813 Field-officers, 44,938 Company-officers, and 1,385,645 men.

Naval Force—11 ships of the line, 14 first-class frigates, 17 sloops-of-war, 8 brigs, 9 schooners, 6 steamers : with 67 captains, 94 commanders, 324 lieutenants, 133 passed midshipmen, 416 midshipmen, and 31 masters.

The crews being formed of European sailors chiefly, no estimate is given of sufficient authenticity to depend upon as to the native citizens employed afloat in the services of the State.

The Militia appears a fearful Xerxian force, but it is really of no consequence whatever

except as a protective one for the purposes of invasion, being quite met by the militia of the British provinces, as no larger army than 20,000 men can be effectually moved or subsisted on such an extensive frontier as Canada, and that only by an immense sacrifice of money.

Having thus given a glimpse at the state of affairs, I must leave my readers for the present, after a little talk about the city of Kingston.

Kingston, instead of suffering, as predicted, by the removal of the seat of government, having been thrown on her own resources, is rising fast.

Her naval and commercial harbours are being strongly fortified. The public buildings are important and handsome.

The Town Hall is probably the finest edifice of the kind on the continent of America, and cost £30,000, containing two splendid rooms of vast size, Post-office, Custom-house, Commercial Newsroom, shops, and a complete Market Place, with Mayor's Court and Police-

office, and a lofty cupola, commanding a view of immense extent.

There are three English churches, built of stone, a Scots church of the same material, several dissenting places of worship, and a magnificent cathedral, almost equal in size to that at Montreal, for Roman Catholics, with a smaller church attached, a seminary for educating the priests, a nunnery, and an Hotel Dieu, conducted by Sisters of Charity ; also an immense building for a public hospital, extensive barracks for troops, and several private houses of inferior importance, with four banks.

There are ten daily first-class steamers running to and from Kingston, and about thirty smaller steamers and propellers, with a fleet of two hundred schooners and sailing barges. The navigation is open from the 1st of April until late in November.

To show the trade of this rising city, now containing near twelve thousand inhabitants, I append a table of its Exports and Imports, for 1845.

Below, we give a return of the amount and value of goods imported at this Port through the United States, for the benefit of drawback. The importations under this law have not been large, but the return shows that a material saving has been effected under this operation. For the return we are indebted to the politeness of the late collector, Mr. Kirkpatrick.

We have also been favoured with a return of the shipping, which, during the season of 1845, has entered this port. The reports to the Custom House embrace 388,788. This return includes the steamers employed on the Bay and Lake, when carrying merchandize; but, as the law requiring vessels to report only came into force several weeks after the opening of the navigation, and as it has not in all instances been obeyed, the return is not quite as full as it might have been under other circumstances. As much as 15,000 or 20,000 tons have in this way entered without reporting. The amount of tonnage for 1845, stated above, is likewise exclusive of all that engaged in trade on the canal and river, and which is very nearly equal in amount.

The Provincial Revenue returns for 1845 are said to exceed those of 1844 by £55,000.

Kingston is, in fact, the key of the Great Lakes, the St. Lawrence and the Rideau Canal being their outlets for commerce; but, unless railroads are established between the Atlantic at Halifax and these Lakes, the prosperity of this and many other inland towns will be materially affected, as by the enlargement of the Rideau branches at Grenville, &c. and the La Chine Canal to the required ship navigation size, Kingston must no longer hope for the unshipment of bulky goods and the forwarding trade on which she so mainly depends; a glance at the forwarding business done by the Erie Canal to New York on the American side, and that by the Welland, St. Lawrence, and Rideau on the Canadian, being quite sufficient to prove that all the energies of the Canadians are required to compete with their rivals. And for this purpose I cite an extract from a circular put forth by the Free Trade Association of Montreal, which contains a good deal of sound reasoning on this subject, amidst, of course, much party feeling on the Free Trade principle.

“ We now proceed, in the development of our plan, to show the incalculable advantages that will result to Canadian commerce and the carrying trade, by removing all duties and restrictions from American produce.

“ First, we shall show the amount of produce collected annually on the shores of our great island waters, and brought to this city for distribution to the various markets of consumption ; next, the vast quantity that passes through the Erie Canal, seeking a market at New York and other American ports ; and, lastly, we shall show that it is in the power of Canada to divert a large share of this latter trade through her own waters, if her people and legislature will promptly give effect to the liberal and enlarged policy which it is the object of this Association to advocate and urge.

“ NO. 1.—SHOWING THE QUANTITY OF PRODUCE BROUGHT BY THE ST. LAWRENCE TO THE CITY OF MONTREAL, IN THE YEAR 1845 :—

“ Pork, 6,109 barrels ; beef, 723 barrels ; lard, 460 kegs ; flour, 590,305 barrels ; wheat, 450,209 bushels ; other grain, 40,781 bushels ; ashes, 33,000 barrels ; butter, 8,112 kegs.

“ NO. 2.—SHOWING THE QUANTITY OF PRODUCE CARRIED
THROUGH THE ERIE CANAL IN THE YEAR 1844:—

“ Pork, 63,646 barrels ; beef, 7,699 barrels ; lard, 3,064,800 lbs. ; flour, 2,517,250 barrels ; wheat, 1,620,033 bushels ; corn, 35,803 bushels ; flax-seed, 8,303,960 lbs. ; ashes, 80,646 barrels.

“ From the foregoing statements it will be seen that the quantity carried through the latter channel is enormous as compared with the former. It becomes then a question of vital importance whether a portion of this trade can be attracted through the St. Lawrence. We believe that it can, because the cheapest conveyance to the seaboard and to the manufacturing districts of New England must win the prize ; and who will deny that the securing of this prize is not worth both our best and united exertions ?

“ The cheapening of the means of transit is the great object to be obtained ; and our best practical authorities are firmly of opinion that the St. Lawrence will be made the cheapest route, as soon as our chain of inland improvements is rendered complete. They affirm that the cost of transporting a barrel of

flour from Detroit to Montreal will not exceed 1s. 6*d.* to 1s. 9*d.* The difficulty will then be to secure a port of constant access to the sea, and that difficulty will be overcome by the early completion of the projected Portland railway: a road that will place us within a day's journey of that city, the harbour of which may be made the safest and cheapest on the continent of America. By that route we shall avoid the occasional dangers and inconveniencies of the St. Lawrence, from Montreal outwards, practically secure a long season for trade in the fall of the year, and safely reckon on freights to Liverpool as low as those from New York. But what is equally important to the transit trade to England is this: that by rendering our charges cheaper than those through the Erie Canal to Boston, we shall secure the transit trade to that great city, and all other eastern markets, as well as the supplying of our sister colonies, commonly known as the Lower Ports. This picture may appear too flattering to those who have not investigated the subject; but to

such we say, examination will convince them that, with the St. Lawrence as a highway, and Portland as an outlet to the sea, we shall be enabled, successfully, to struggle for the mighty trade of the West, and bid defiance to competition on the more artificial route of the Erie Canal. But there is no time for slumbering; inactivity, at this crisis, would be fatal to our hopes; even the very produce of Western Canada may be carried, in spite of us, through American channels, unless we immediately carry out the completion of our own.

“ We may here also remind the Canadian farmer, at whatever place he may be situated, that every saving effected in the means of bringing his produce to market adds in the same degree to the value of his wheat and every other marketable product of the soil he cultivates.—And here it may not be out of place to add that, repudiating all sectional proceedings, we seek no advantage for classes, no peculiar advantage for Montreal over other parts of the province; we advocate, on the

contrary, the general interests of producers and consumers—the general welfare of the community.”

People of enlarged views in Canada do not, however, fancy, with the anti-free-traders, that Sir Robert Peel's measures will prove so very destructive to colonial interests; on the contrary, they clearly see that new energies will be called into operation, and that Canada will be opened by railroads, and no longer monopolized by extensive landholders of waste and unprofitable forests.

Having now arrived at the termination of this volume, I have only to add that, if a war is forced upon Great Britain by the United States, the British dominion here will be sustained without flinching; and that the old English aspiration of the militia will be

FOR THE HONOUR AND GLORY OF BRITAIN,
GOD SAVE THE QUEEN !

THE END.

F. Shoberl, Jun., Printer to His Royal Highness Prince Albert,
51, Rupert Street, Haymarket.
